(These dimensions should not be used for construction or installation purposes. Certified drawings available on request.)

NOTE: Specifications subject to change without notice.

SPECIFICATIONS

INPUT: Low-slip induction motors, three phase.

DUTY: Continuous.

BEARING TYPE: Ball bearings, shielded, life-time lubricated.

OUTPUT VOLTAGE: 115 volts, for single phase output. Three phase output models reconnectable for 115/200 (120/208) four-wire or 115 volts delta, line-to-line.

OUTPUT VOLTAGE STABILITY: Within 1% for constant load and constant input frequency.

EFFECT OF INPUT VOLTAGE CHANGE ON OUTPUT VOLTAGE: Output voltage will change less than 1% for input changes of ±10% or for short period input disturbances as great as 30%.

OUTPUT FREQUENCY: From 420 cycles at no load to approximately 410 cycles, full load.

OUTPUT FREQUENCY STABILITY: Within ±½% at constant load and constant input frequency.

TEMPERATURE RISE: 40°C generator, 55°C motor.

R.F. NOISE: May be considered zero for most applications.

EXCITATION: Internal, permanent magnet field.

REGULATION: Inherent—within 10% envelope for unity p.f. loads. Regulator not required for most applications.

WAVE FORM: No sharp peaks or spikes. Total harmonics, single or three phase, within 4%.

AUDIBLE NOISE: Average 79 db for standard units. (Measurements on 'B' scale, at 3 feet distance from unit, in accordance with ASA Standard No. Z24.7-1950).

SHORT-CIRCUIT IMMUNITY: Due to internal shielding, unit will tolerate repeated short circuits on output without significant change in normal operating voltage.

SHORT-CIRCUIT CURRENT: On dead short circuit on generator, unit will deliver approximately four times rated full load current.

NOBRUSH® FREQUENCY CONVERTER

SERIES 39 • VOLTAGE REGULATED FOR CONVERSION OF 60 TO 400 CYCLES

FEATURES

- ☐ *Voltage Regulation of ±1.5%*
- ☐ *Brushless Permanent Magnet Design*
- ☐ *Line Isolation & Stabilization*
- ☐ *Maximum Dependability*
- ☐ *Low Audible Noise*
- ☐ *Cool Operation*
- ☐ *Excellent Wave Form*

This new, Series 39, Regulated, Vertical Frequency Converter combines the "No-Brush" permanent magnet generator together with control windings and simplified sensing electronics, to provide both the traditional "Brushless" rugged design and a closely regulated 400 Hz power system. The standard features of the "No-Brush" design of: Line isolation and stabilization; low audible noise; cool operation; and excellent wave form are covered in detail in the Specifications below. Units rated 5KVA, 0.8 to 1.0 power factor are available on a production basis.

	Output					Input			Dimensions		
Model No.	KVA	Volts	Regulation	Phase	Freq. Full Load	Motor	Volts	Full Load Current-Amps	H	Dia.	Wt.
39-001	5	120/208	±1.5%	3	410Hz	7.5 HP 3 phase 60 Hz 1760 RPM	220/440 ±10%	21.1/10.5	18.3"	16.8"	243 lbs.
39-002	5	115	±1.5%	1	410Hz		±10%	21.1/10.5	18.3"	16.8"	243 lbs.

NOTE: Specifications subject to change without notice.

SPECIFICATIONS

GENERATOR: Permanent Magnet Rotor, Brushless design, control windings added to stator, 3 phase, continuous duty.

MOTOR: Low slip induction motor, 3 phase, continuous duty.

VOLTAGE REGULATION: ±1.5% from no load to full load for 0.8 to 1.0 power factor loads.

EFFECT OF INPUT VOLTAGE CHANGE ON OUTPUT VOLTAGE: For long term voltage fluxuations of ±10%, output voltage will change less than 1%. For short term input voltage disturbances of as great as 30%, output voltage will change less than 1%.

OUTPUT VOLTAGE: Three phase, reconnectable 120/208 volts four-wire or 120 volts delta, line-to-line.

VOLTAGE ADJUSTMENT: Output voltage can be adjusted ±5% at no load & full load, greater at partial loads.

TRANSIENT PERFORMANCE:
a) Maximum time for voltage to return and remain within steady state regulation band after instantaneous application or removal of full load is 250 milliseconds.
b) Maximum voltage dip on application of full load from a no load condition is 10%.
c) Maximum voltage rise on removal of full load to a no load condition is 5%.

OUTPUT FREQUENCY STABILITY: Within ±½% at constant input frequency.

OUTPUT FREQUENCY TOLERANCE: 420 Hz no load to 410 Hz at full load.

TEMPERATURE RISE: 50°C, Maximum for both motor and generator.

WAVE FORM: No sharp peaks or spikes. Total harmonics, less than 4%.

EXCITATION: Internal permanent magnet field.

RF NOISE: Extremely low. May be considered zero for almost all applications.

BEARING TYPE: Ball bearings, shielded, life time lubricated.

AUDIBLE NOISE: 79 db. Measurement on 'B' scale at 3 feet distance, in accordance with ASA Standard No. Z24.7-1950.

SHORT CIRCUIT IMMUNITY: Due to internal shielding, unit will withstand repeated short circuit.

FINISH: Silver blue metallic enamel, oil and water resistant.

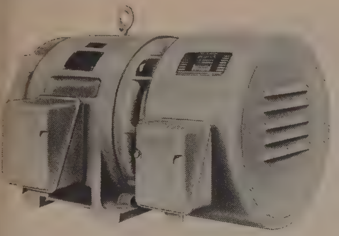
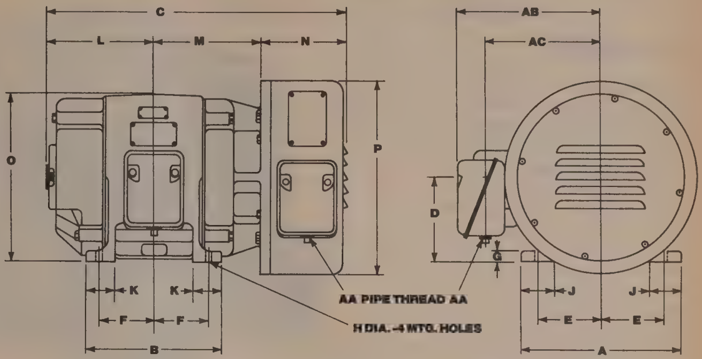
NOBRUSH® FREQUENCY CONVERTER

SERIES 35 • SYNCHRONOUS DRIVEN • FOR CONVERSION OF 60 TO 400 CYCLES





FEATURES

- ☐ *Exact 400 Cycle Output*
- ☐ *Negligible Harmonic Distortion*
- ☐ *Extremely Low Audible Noise*
- ☐ *Compact Design*
- ☐ *Short Circuit Resistant*
- ☐ *Stable Output Voltage*
- ☐ *Practically Maintenance Free*
- ☐ *Long Continuous Service Life*

Here is the ultimate in 60 to 400 cycle frequency conversion. The combination of a low speed brushless synchronous motor direct coupled to a famous "NoBrush" permanent magnet generator results in a converter far superior to any previously available. For applications requiring exactly 400 cycles coupled with minimum audible noise, long service life and absolutely minimum maintenance, these converters meet every need.

(These dimensions should not be used for construction or installation purposes. Certified drawings available on request)

SPECIFICATIONS

INPUT: Brushless synduction motors, three phase.

DUTY: Continuous.

BEARING TYPE: Shielded lubricated-for-life oversized ball bearings.

OUTPUT VOLTAGE: 115 volts for single phase output. Three phase output models, reconnectable for 115/200 (120/208) volts four-wire or 115 volts delta, line-to-line.

OUTPUT VOLTAGE STABILITY: Within 1% for constant load and constant input frequency.

EFFECT OF INPUT VOLTAGE CHANGE ON OUTPUT VOLTAGE: No change for input changes of ±10%.

OUTPUT FREQUENCY: With constant 60 cycle input, 400 ±0 cycles, no load to full load.

OUTPUT FREQUENCY STABILITY: Within ±0 cycles at constant input frequency.

TEMPERATURE RISE: 40°C (104°F) maximum.

RF NOISE: Practically zero. Test data available on request.

EXCITATION: Internal, permanent magnet.

REGULATION: Inherent usually within 8% envelope for Unity Power Factor loads. Regulator not required for most applications.

WAVE FORM: Nearly pure sine wave. No sharp peaks or spikes. Total harmonics usually less than 2%.

MOUNTING: Four cast feet on motor housing. Holes in mounting feet for hold down bolts.

AUDIBLE NOISE: At full load 65 db, measured in an ambient of 57 db.

SHORT CIRCUIT IMMUNITY: Due to internal shielding, unit will tolerate repeated short circuits on output without significant change in normal operating voltage.

SHORT CIRCUIT CURRENT: On dead short circuit on generator, unit will deliver maximum of five times rated full load current.

This series of Isolator Stabilizer Motor-Generator has been designed specifically for use where line transients may interfere with the proper operation of instrumentation and control equipment.

This brushless generator completely isolates the output from the input line. Coupled with "Inertia Stabilization," this results in an output voltage which remains relatively undisturbed by most input line variations, either transient or long term.

Units are designed to accept long term input voltage variations of up to ±15% from nominal, when required. Standard units will accept ±10% change with no change in output. "Inertia Stabilization" allows unit to absorb input line transients of as much as 30% for as long as 500 milliseconds with less than 1% change in output.

Standard "Inertia Stabilized" units employ the inertia of the rotating systems of the motor and generator to secure their unusually stable output voltage characteristics during line fluctuations. Exact 60 cycle output regardless of load is attained by use of synchronous speed motor drive. With constant 60 cycle input, output frequency will remain constant regardless of input voltage transients and load variations, within the generator rating. Maintenance is greatly minimized because of the simplicity of the motor-generator combination. These units are designed to give years of continuous trouble-free service.

For Complete Information

We would be pleased to furnish you with complete information on the "NoBrush" line of motor-generator sets, frequency converters, and alternators, and how they can be efficiently implemented or custom-designed to meet your specific requirements. For all the facts, please write or call:

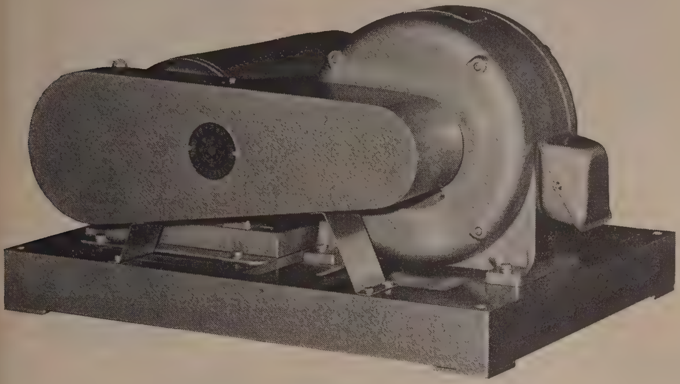
GEORATOR™ CORPORATION

SERIES 37 • FREQUENCY CONVERTERS FOR CONVERSION OF: 50 HZ TO 60 HZ AND 60 HZ TO 50 HZ



FEATURES

- ☐ *Line Isolation & Stabilization*
- ☐ *Exceptional Voltage Stability*
- ☐ *Withstands Short Circuit*
- ☐ *Maximum Dependability*
- ☐ *Extremely Low RF Noise (0 for most applications)*
- ☐ *Excellent Wave Form*

FUNCTION: These Series 37 Motor-Generator Sets provide frequency conversion from 50 Hz power to 60 Hz, and from 60 Hz to 50 Hz, in ratings from 0.5 KVA to 25 KVA. The units are also designed to isolate power line disturbances from your equipment. The built-in "Inertia Stabilization" of these units protects electrical and electronic equipment from momentary power outages, switching transients, over and under voltages, brown-outs and power line noise.

CONSTRUCTION: These ruggedly built, belt-driven, motor-generator sets are all mounted on a sturdy steel frame base. Units in the 0.5 KVA to 5 KVA power range are designed around the highly efficient "NoBrush" Permanent Magnet Generator. Units in 12.5, 18.75, and 25 KVA power range have brushless rotating rectifier type generators with voltage regulators, to provide ±1% output voltage regulation. Three phase synduction motor driven units with timing belt give exact 50 Hz or 60 Hz output with constant input frequency. Three phase induction motor and single phase capacitor start-induction run motor driven units with "V" belts provide an output frequency of ±2%.

APPLICATION: To provide frequency conversion, basic power, and superior line isolation and stabilization for exported and imported electrical and electronic equipment. Available in power ratings from 0.5 KVA to 25 KVA. Detail specifications are given on the following page.

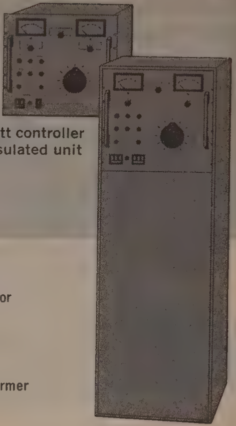
HV DC power supplies

HIPOTRONICS®

. . . A COMPLETE LINE OF HIGH VOLTAGE POWER SUPPLIES FOR ALL HV REQUIREMENTS, INCLUDING PULSED APPLICATIONS AND ACCELERATOR SUPPLIES. OUTPUT CURRENTS RANGE FROM 0.1 MA TO 100 AMPERES. ALL UNITS ARE CONSERVATIVELY DESIGNED FOR CONTINUOUS USE; THEY ARE AVAILABLE WITH FULLY INSTRUMENTED CONTROL CONSOLES, OR WITHOUT CONTROLS FOR USE IN OEM EQUIPMENT OR WITH EXISTING CONTROLLERS.



5 kilowatt controller for oil-insulated unit

5 and 10 kilowatt air insulated unit

DESIGN FEATURES

- Reversible polarity
- Output-connected, triple-range voltage meter
- Triple-range current meter in return leg of HV circuit
- Adjustable overload relay, 10% to 110% rated current, with reset button
- Rated current available from zero to rated voltage
- Meter recalibration potentiometers

CUSTOMIZED CAPABILITY

Hipotronics has designed and custom-manufactured a wide variety of power supplies for a wide variety of uses. Customized power supplies include application-oriented units for: electrostatics, accelerators, lasers, high power radar, high voltage component testing, and many more.

PERSONNEL SAFETY FEATURES

- Output shorting solenoid and/or bleeder resistor
- Series-limiting resistor in output circuit
- External interlock provision and pilot light
- Zero start interlock and pilot light

EQUIPMENT SAFETY FEATURES

- Surge protection for meters and relays
- Backup circuit breaker in primary of HV transformer
- Input circuit breakers and pilot light

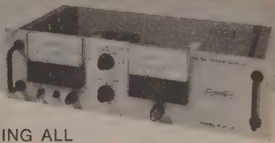
metered HV power packs



. . . STANDARD 5-MA AND 2-MA HV POWER PACKS WITH SIMPLIFIED CONTROLS. THEY ARE LOW COST SUPPLIES, DESIGNED FOR RELAY RACK MOUNTING, FEATURING ALL INDUSTRIAL GRADE COMPONENTS.

FEATURES

- Output-connected KV meter, 3½" square, 2% accuracy, single range
- Output-connected current meter, 3½" square, 2% accuracy, single range
- Continuously adjustable output control
- AC input switch, fuse, and pilot light
- HV fuse, with blown indicator
- 115-volt, 50/60-Hz input
- Surge and transient protection on all meters and powerstats
- Reversible polarity

SPECIFICATIONS

Output (KV)	Current (ma)	Ripple (% rms/ma)	Polarity	Model No.	KV Meter	Current Meter (ma)	Size WxHxD (in.)
0-2.5	5	.5	Reversible	R 2B	0-3	0-5	19x7x8

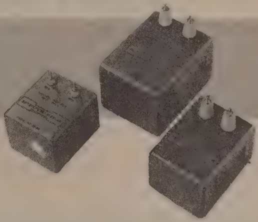
0-60	2	.5	Reversible	R 60B	0-60	0-2.5	19x12x10

OPTIONAL EXTRAS
1. Bench top cabinet $50.00
2. Short circuit limiter — Ideal for capacitor charging, flocking, electrostatic operations, etc. Supply will operate with short circuit on output and limit current to 5 ma .... $ 5.00

standard HV power packs



. . . WIDE RANGE OF COMPACT MINATURIZED HV POWER PACKS, WITH OUTPUT VOLTAGES FROM 2 TO 100 KV AND CURRENT RATINGS OF 2, 5 OR 10 MA.

FEATURES

- Hermerically sealed, oil-or epoxy-filled
- Solid state rectifiers
- 10-year life
- Low ripple
- Good regulation
- Compact, highly miniaturized
- Reversible polarity

Note:
Inquiries are invited for units with outputs different than our standards, built-in line regulation, short circuit, current-limited features, lower output ripple, 220V, 50/60-cycle inputs, DC to HV DC, or center-tapped output.

SPECIFICATIONS

Input: 0-125 volts, output voltages and currents stated for nominal 117 volt input
Regulation: 10 to 15% no load to full load
Ripple: 0.5% rms per milliampere output
Life: 10 years at 25°C ambient with rated output voltage and current
Terminations: Ceramic bushings on models 30 KV and below. Re-entrant receptacles with 3-foot mating coaxial cables on models 40 KV and up

Heath's new power supplies set new performance standards

- Choice of four DC outputs: 0-7.5 V, 0-15 V, 0-30 V or 0-60 V
- 3½-digit or 3½″ meter readout
- Constant voltage *or* constant current operation
- Remote voltage and current programming
- Precise load and line regulation—±0.05% voltage, ±0.1% current
- Complete output protection
- Remote sensing automatically compensates for lead voltage drops
- Available factory assembled or in easy-to-build kit form

Heath's versatile new 2700-Series DC power supplies do much more than just provide the right voltage and current—they set new standards for precision and ease of operation.

Digital or analog readout. These power supplies are the first in their price range to offer a choice of readouts. The digital models have two-decade autoranging to provide high resolution for low voltage and current settings.

Constant current or constant voltage operation. And it's true constant current, not simple current limiting. Adjust two controls to get the voltage and current you need. And if one supply doesn't deliver exactly the output you require, just connect them in series or parallel—with no loss of regulation!

Remote programming and sensing. For systems use and remote applications, both voltage and current can be programmed. And all supplies provide remote sensing at the load to automatically compensate for voltage drops due to long leads and connectors.

Output protection. You don't have to worry about these power supplies. Short circuit operation or accidentally applied high voltages can't harm them.

All 2700-Series power supplies are available in easy-to-build kit form or completely factory assembled and calibrated. Either way you get a power supply with the precision and performance that your application demands. Send the reply card or coupon for our latest catalogs and get complete details.

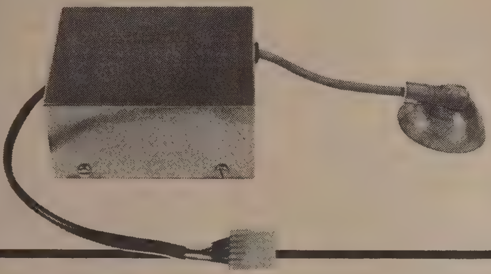
CUSTOM POWER SUPPLIES

DC To DC Or DC To AC
- Custom designed
- High reliability
- Operation temperatures up to 125°C
- High efficiency
- Low E.M.I.
- Wide variety of package configurations.
- Voltage regulators designed to meet customer requirements.

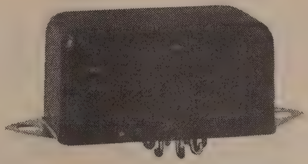


HIGH VOLTAGE DC TO DC POWER SUPPLY

DC Input: 23 V @ 240 ma
Outputs: 9 KV DC @ 60 ua
400 V DC @ 4 ma
12 V RMS (13 KHZ) @ 75 ma
Special characteristics: designed for operation @ 35,000 ft.
Physical size:
3.7" x 2.81" x 1.75" metal cased

LOW VOLTAGE DUAL OUTPUT DC TO DC POWER SUPPLY

DC Input: 24 V @ 350 ma
Outputs: +24 V @ 125 ma
−24 V @ 125 ma
Special characteristics: hermetically sealed.
Physical size: 2.125" x 1.25" x .875" metal cased



MULTI-OUTPUT DC TO AC POWER SUPPLY

DC Input: 28 V @ 2.5 a
Outputs: 30 V peak @ 270 ma
30 V peak @ 630 ma
30 V peak @ 1 ma w/ct
3.8 V peak @ 320 ma
Special characteristics: all outputs are 200 HZ square wave — hermetically sealed
Physical size: 3.125" x 2.312" x 2.06" metal cased
Output voltage(s) may be revised as long as the total power remains the same.

STANDARD EPOXY INCAPSULATED DC TO DC POWER SUPPLIES

DC Input 12 V @ 150 ma

Part No's	Output
27-0011-11	±6 V DC @ 100 ma

HOPE ELECTRONICS BOX 773 CLIFTON, N. J. 07013 (201) 777-3522

Powertron SOLID STATE AC POWER SUPPLIES

The Powertron AC Power Supplies provide stable, low distortion, AC power at frequencies within the audio frequency spectrum. These highly reliable and versatile power sources find wide application in calibration and test stations, motor drives, gyro wheel supplies, laboratory use, military component testing, and operating foreign equipment. These supplies may be used whenever it is necessary to provide AC power at a frequency not available from the power lines. The various supplies feature all solid state construction, wide operating frequency range, low distortion, and a wide variety of output voltages and impedances. The units are designed to be used in modular form so that a single unit can provide single phase output, and two or three units may be used to provide two phase or three phase outputs respectively.

AMPLIFIER SPECIFICATIONS
(Series 250S, Illustrated)

Output Circuit:
Single phase, isolated (Ground terminal is provided for optional grounding of output.)

Output Power:
250 VA

Load Power Factor:
.7 Lead through .7 Lag for full power output. Useable to .2 at reduced power.

Output Voltage Range:
0-130 V RMS (An output connector provided at the rear of the unit may readily be reconnected to provide optimum power output at other voltages. Ranges available are 0-260 V, 0-190 V, 0-130 V, 0-90 V, 0-75 V, 0-67 V, 0-60 V, 0-38 V, 0-30 V, and 0-17 V.

Output Frequency Range:
45 Hz to 10,000 Hz for full power out. 20 Hz to 20,000 Hz at reduced power.

Output Distortion:
0.1% mid band

Load Regulation:
Factory set to ±0.5% mid band (A control is provided for zero regulation adjustment over most of frequency range.)

Line Regulation:
±0.1% for ±5% line change.

Transient Response:
50 Microseconds.

Hum Level:
80 db approx. below rated output voltage.

Thermal Overload Protection:
Output transistors protected by thermal cut-out circuit.

Short Circuit Protection:
Output may be shorted indefinitely without damage to unit.

External Amplifier Input:
An input connector is provided at the rear of the unit when it is desired to drive the amplifier from an external source. Model XA-1 plug-in Module is required for this mode of operation.

External Sync. Input:
An input connector is provided at the rear when it is desired to synchronize the plug in oscillator with an external frequency source.

Convenience Outlets:
Two convenience outlets controlled by the power switch are provided at the rear of the unit. These permit single control operation of one or two additional amplifiers when 2ø or 3ø outputs are required. When not used for this purpose, the outlets may also be used to turn on auxiliary equipment which is mounted in the same test console.

Meter:
A voltmeter with range of 0-150 V RMS is provided to monitor the output voltage.

Input Power:
115 V or 230 V, 50-60 Hz (400 Hz input available).

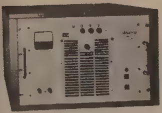
Ambient Temperature Range:
0° C to 55° C.

Dimensions:
5¼ x 19″ Rack Panel x 14″ Deep.

Weight:
75 Lbs. Approx.

The ordering designations listed below are for convenience of specifying the components required for various power supply configurations. To select an appropriate unit for your requirements first determine which category, 1-phase, 2-phase, or 3-phase, is most suitable to your intended load. Then use the ordering designation adjacent to the required output power within that category. For the complete ordering designation replace the asterisk with the ordering code letters of the plug-in-oscillator listed

1ø Power Supplies (For Use with Single Phase Loads)



Model 1000S-1-N

Ordering Designation	Total Output Power	Output Voltage Range	Input
80S-1- *	80VA	17, 30, 38, 60, 67, 75, 90, **130**, 190, 260	1-Phase **115**, 230
250S-1- *	250VA

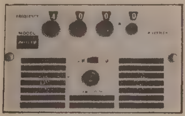
4500S-3- *	4.5KVA		
6000S-3- *	6KVA	**130**, 150, 260, 280, 300	
9000S-3- *	9KVA		



PLUG-IN OSCILLATORS

Single phase (1ø) and polyphase (Pø) oscillators are available for both fixed frequency and variable frequency output. A coarse and fine concentric control is included on each oscillator panel for precise amplitude adjustment. Polyphase oscillators include a switch on the front panel which provides either two-phase or three-phase output. All plug-in oscillators are provided with Sync. capability which permits locking-in their output frequency with an external source of the same nominal frequency.

CODE		FREQUENCY	ACCURACY
Single Phase	Poly Phase		
A	AA	400 Hz	0.1%
B	BB	60 Hz	0.1%
C	CC	Specify	0.1%
D	DD	Specify	0.01%
E	EE	Specify	0.001%
K	KK	10 Hz - 10 KHz	1.0%
L	LL	10 Hz - 100 Hz	1.0%
M	MM	100 Hz - 1 KHz	1.0%
N	NN	350 Hz - 450 Hz	0.25%
P	PP	300 Hz - 500 Hz	0.25%
Q	QQ	1 KHz - 10 KHz	1.0%

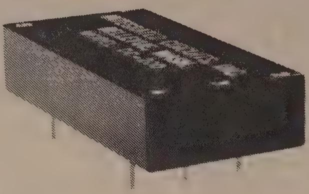
ENGINEERING AND DESIGN CAPABILITY

CIRCUIT DESIGN AND ANALYSIS

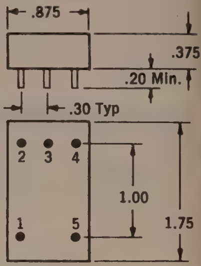
ICI Engineering offers the customer complete capability from designing and analysing circuits from his applications or specifications. ICI has specific experience in power conversion and regulator devices; complex active filters of the low pass, high pass, band pass or band reject types; linear circuits such as servo amplifiers, transducer signal conditioning electronics; high accuracy sample and hold circuits; as well as D/A converters; timing devices; digital devices such as specially packaged memory systems, A/D converters and other logic systems.

COMPLEX PACKAGE DESIGN AND CIRCUIT LAYOUT

ICI Engineering is expert at converting even the most complex circuits to practical and producible designs. Layouts combine thick and thin film elements to achieve the least expensive solutions to the circuit packaging needs of the customer.



OUTLINE DIMENSIONS



MODEL DC-200 DUAL OUTPUT DC/DC CONVERTER

ELECTRICAL CHARACTERISTICS: Operating Temp. Range = 0 to 85°C; see Note 1 V_{in} = 28 VDC and T = 25°C unless specified otherwise.

Parameter	Conditions	Min.	Typ.	Max.	Units
Output Voltage ±Vo	$+I_L = -I_L$ = 100 Ma.	14.0	15.0	16.0	VDC
Output Current $\pm I_L$	T = 0 −85°C	0	200	250	Ma.
Output Balance ($+I_L = I_L$)	T = 0 −85°C	—	0.15	0.5	VDC
Load Regulation (I_L = 0 to 200 Ma.)	T = 0 −85°C	—	1.5	—	VDC
Output Ripple	f >100 KHz	—	0.7	1.0	VPP
Input Voltage	T = 0 −85°C	10	28	32	VDC
Input No Load Current	T = 0 −85°C	—	40	50	Ma.
Efficiency	P_O = 6 Watts	75	80	—	%
Output Voltage T.C.	T = 0 −85°C I_L = 200 Ma.	—	.02	—	%/°C
Line Ripple Current		—	—	50	Ma. RMS
Converter Freq.		—	150	—	KHz
Isolation, Input/Output	500 VDC	100	—	—	Meg. Ω
Line Regulation	Output varies in proportion to Input				
Storage Temp. Range	−65°C to +150°C				
Size (excluding Pins)	1.2 in³				
Weight	1.0 ounce				
Finish	Black Anodize				

Note 1: −55°C to +100°C Op. Temp. Range available.

MODEL DC-202 DUAL OUTPUT DC/DC CONVERTER

ELECTRICAL CHARACTERISTICS: Operating Temp. Range = 0 to 85°C; V_{in} = 28 VDC and T = 25°C unless specified otherwise.

Output Voltage ±Vo	$+I_L = -I_L$ = 170 Ma.	16.8	18.0	19.2	VDC
Output Current $\pm I_L$	T = 0 −85°C	0	170	250	Ma.
Output Balance ($+I_L = I_L$)	T = 0 −85°C	—	0.15	0.5	VDC
Load Regulation (I_L = 0 to 200 Ma.)	T = 0 −85°C	—	1.5	—	VDC
Output Ripple	f >100 KHz	—	0.7	1.0	VPP
Input Voltage	T = 0 −85°C	10	28	32	VDC
Input No Load Current	T = 0 −85°C	—	40	50	Ma.
Efficiency	P_O = 6 Watts	75	83	—	%
Output Voltage T.C.	T = 0 −85°C I_L = 170 MA.	—	.02	—	%/°C
Line Ripple Current		—	—	50	Ma. RMS
Converter Freq.		—	150	—	KHz
Isolation, Input/Output	500 VDC	100	—	—	Meg. Ω
Line Regulation	Output varies in proportion to Input

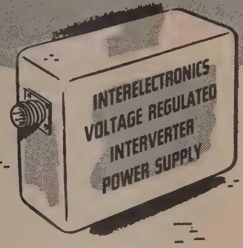
PROVEN RELIABILITY—

DC-DC, DC-AC, SOLID-STATE POWER INVERTERS

over 260,000 logged hours— voltage-regulated, frequency-controlled, for missile, telemeter, ground-support, 135°C all-silicon units available now—



Interelectronics all-silicon thyratron-like gating elements and cubic-grain toroidal magnetic components convert DC to any desired number of AC or DC outputs from 1 to 10,000 watts.

Ultra-reliable in operation (over 260,000 logged hours), no moving parts, unharmed by shorting output or reversing input polarity. High conversion efficiency (to 92%, including voltage regulation by Interelectronics patented reflex high-efficiency magnetic amplifier circuitry).

Wide input voltage range (1 to 250 volts DC). Wide input voltage regulation (output voltage maintained with variations up to 50% in input voltage).

Light weight (to 6 watts/oz.), compact (to 8 watts/cu. in.), low ripple (to 0.01 mv. p-p), excellent voltage regulation (to 0.1%), precise frequency control (to 0.2%) with Interelectronics extreme environment magnetostrictive standards or to 0.0001% with fork or piezoelectric standards.

Complies with MIL specs. for shock (100G 11 misc.), acceleration (100G 15 min.), vibration (100G 5 to 5,000 cps.), temperature (to 150 degrees C), RF noise (I-26600).

AC single and polyphase units supply sine waveform output (to 2% harmonics), will deliver up to ten times rated line current into a short circuit to actuate MIL type magnetic circuit breakers or fuses, will start gyros and motors with starting current surges up to ten times normal operating line current.

Now in use in major missiles, powering telemeter transmitters, radar beacons, electronic equipment. Single and polyphase units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.

Interelectronics—first and most experienced in the solid-state power supply field produces its own all-silicon solid-state gating elements, all high flux density magnetic components, high temperature ultra-reliable film capacitors and components, has complete facilities and know how—has designed and delivered more working KVA than any other firm!

For complete engineering data, write Interelectronics today, or call (914) EL 8-8000 in Congers.

MODEL PC-19 1 KW SQUARE WAVE STATIC INVERTER

The Model PC-19 is a 1000 watt, 28 VDC to 200 VAC rise-time controlled square wave static inverter. This inverter is primarily designed to power windshield heaters for de-icing. DC to DC power conversion to 200 VDC and up to 5.0 amps is also available as an option. Special units can be manufactured to give different output AC voltage and frequencies.*

SPECIFICATIONS:

Input Voltage:	27.5 VDC ±.25 V at inverter terminals. Withstand 35 V for one minute. 0 to 27.5 V no condition will develop that will be detrimental to the unit.
Output Voltage:	#1 — 200 VRMS ±10% with 6 V tap. #2 — 5.5 VRMS ±10% and up to 1.0 Amps. #3 — 200 VDC ±10%, Ripple less than 3 VRMS (Optional).
Output Current:	Up to 5.0 Amps.
Output Power:	1000 Watts total continuous.
Overload:	1300 Watts for one minute and/or on an intermittent basis, provided the base plate temperature of 160°F is not exceeded.
Protection:	Overload and short circuit protection above approximately 7.0 Amps provided.
Frequency:	1000 Hz ±200 Hz.
Waveform:	Essentially square wave; Access to vary rise and decay time up to 50 microseconds (μsec).
Efficiency:	90% typical @ 50 μsec rise and decay time.
Temperature:	−65°F to +160°F (sufficient air circulation of 25 CFM must be provided @ +160°F for continuous operation, unless the base plate temperature is below 160°F).
Humidity:	Greater than 95% for 10 days.
Vibration:	Meets RTCA Paper DO-138 Para 7.2.1 Cat. H Curve 2.
Altitude:	45,000 Feet.
Size:	3.5″W x 9.6″L x 4.6″H (refer to outline drawing).
Weight:	10 Pounds.

***NOTE:**

1. Frequency down to 350 Hz is available at reduced VA (500 VA @ 350 Hz) rating in the same package.
2. Different output voltage from 25 VAC to 250 VAC is available.

FEATURE

- Provision for remote on/off by opening or grounding a low current line.
- Thermal cut off above 225°F in the event of prolonged overload causing excessive temperature condition. (Automatic reset)
- Easy access to vary the rise and decay time of the AC output waveform up to 50 microseconds.

LIGHT DIMMER FOR INCANDESCENT LAMPS

The KGS Electronics Model LT-50 is a pulse width modulated DC to DC regulated converter that delivers 5 VDC and up to 50 watts of power. This converter is primarily designed to power 5 V light bulbs and remotely control the light intensity by a potentiometer. Other model LT-series also available from KGS ELECTRONICS are:

LT-51: 28 VDC input to 5 V and 26 VDC outputs, adjustable down to .5 V and 4 VDC respectively, and delivers total of 50 watts of output power.

LT-24: 28 VDC input to 5 V and/or 26 V amplitude controlled AC output @ 400 Hz, the outputs adjustable down to .5 V and 2.6 VAC respectively, and delivers total of 25 watts of output power.

LT-26: 115 VAC, 400 Hz input to 5 V amplitude controlled AC output @ 400 Hz, the output adjustable down to .5 VAC and delivers 25 watts of output power.

LT-27: 115 VAC, 400 Hz input to 5 V pulse width controlled AC output @ 400 Hz, the output adjustable down to .5 VAC and delivers 25 watts of output power.

LT-23: 115 VAC, 400 Hz input to 5 VDC output unregulated output, adjustable down to .5 VDC and delivers total of 25 watts of output power.

SPECIFICATIONS MODEL LT-50

Input Voltage:	28 VDC ±3 V operate electrically down to 20 VDC.
Input Current:	2.5 Amps typical @ 28 VDC input and decreases as the input voltage is increased.
Output Voltage:	.25 VDC to 5 VDC adjustable.
Output Current:	10 Amps from 3 VDC to 5 VDC range.
Control:	1 inch diameter, 2 Watt, wire-wound, linear taper potentiometer controls DC output from .25 to 5 VDC.
Regulation:	Better than ±2.5% from no load to full load. Better than ±2.5% from 25 to 32 VDC input voltage for output voltage setting from 1 to 5 VDC.
Ripple:	Less than 25 MV RMS; Spike less than 100 MVp-p.
Efficiency:	72% typical.
Temperature:	−50°F to +160°F.
Humidity:	Greater than 95% for 10 days.
Altitude:	45,000 Feet.
Size:	3.2″H x 3.5″W x 5.0″L.
Weight:	2.7 Pounds.

BATTERY CHARGER

DESCRIPTION:

Ferro-Resonant Battery Charger (FBC) provides a stable pulsating DC voltage with short circuit protection. A series of these FBC models are available from KGS ELECTRONICS with high efficiency and reliability at reasonable cost.

FEATURE:

- Full wave rectified unfiltered DC output.
- 105-125 VAC input range*
- Output regulated by KGS standard Ferro-Resonant Transformer (FRT).
- Five output terminals: One terminal is for high charging rate and the remaining four are provided with current limiting via light bulb. Current limiting control module for trickle charging to replace light bulb is also available.
- Inverse intensity of light bulb indicates a degree of battery charge.
- The unfiltered rectified pulsating DC voltage is capable of trickle charging batteries with different degree of charge.
- Sufficient range of the regulated output may be obtained by:
  - (a) Specifying the percent tap
  - (b) Specifying the number of taps
  - (c) Utilizing combination of taps
  - (d) Selecting different bulbs
- Output filter capacitor can be added to provide filtered DC output.

SUGGESTED EXTERNAL APPLICATION

Where:

V_B = Battery Voltage
V_{Reg} = Regulated output from FBC-series
I_C = Current Control Module (light bulb is standard)

Model Number	Power Rating VA	Average DC Output Voltage Range
FBC200	200	10 to 200
FBC300	300	15 to 200
FBC400	400	20 to 200
FBC500	500	25 to 200

HOW TO ORDER

FBC200 — 28 — 3 — X
X: Number of taps**
3: % tab (−3% is standard)
28: Rated battery voltage (28 V Ni-Cad battery is standard)
FBC200: Model Number and VA Rating

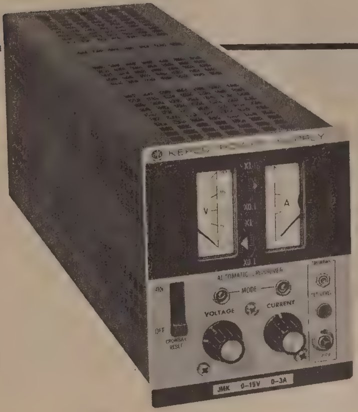
*230 VAC input available on special order.
**Additional taps can be provided at additional cost.

We also manufacture Transformers & Chokes. See Vol. 3. All technical data and prices subject to change without notice, F.O.B, Pasadena, California

KEPCO

POWER SUPPLIES

all KEPCO products are backed by a firm 5-Year Warranty



the company Kepco, Inc., is a New York, U.S.A.-based manufacturer of advanced d-c voltage and current stabilizers, with a 28-year history of innovations and excellence.

the product Kepco has concentrated in several important areas of power supply design:

- **Linear series regulators:** ideal for remote control, as in automatic test equipment, because of their faithful execution of programming instructions, their fast recovery and noise-free operation.
- **High Voltage Hybrids:** a combination of integrated circuit and transistor controls, with high vacuum valves for the direct linear control of voltage to 5000 volts.
- **Operational Power Supplies:** both conventionally filtered and models with a minimum output capacitance for wide bandwith. These power supplies act like giant operational amplifiers, and can be used to scale, sum, or integrate signals on a power basis up to 1000 watts.
- **Bipolar Power Supplies:** operational power amplifiers that respond to the *sense* of a control instruction, as well as the magnitude.
- **Ferroresonant Voltage Stabilizers:** the simplest, most reliable sources of d-c that can be fabricated.
- **Programmers:** interfaces between the digital world of control and the analog world of power supplies.

the philosophy of construction Kepco Power Supplies may be characterized by their cool operation, and easily repairable construction. It is Kepco's practice to employ sealed-bearing blowers with efficient heat radiators in models above 200 watts, (and even some smaller ones) to achieve the necessary thermal exhaust with an absolutely minimum temperature rise in such sensitive components as the transistors, zener references, filter capacitors, etc.

Kepco *sockets* all transistors and all integrated circuits for easy trouble shooting and repair. Even most *power transistors* are socketed. Construction is on double-sided printed circuit cards, interconnected by cabled harnesses through easily removed edge connectors.

the warranty Kepco warrants each of its power supplies to be free of defect and to meet published specifications for a period of 5-years. Our representatives around the world are prepared to honor this warranty, and provide such service as may be necessary.

manuals instruction Kepco Power Supplies are accompanied by a comprehensive manual containing Specifications, Operating Instructions, Theory of Operation, Schematic, Parts Locating Drawings, Complete Parts List and Outline Drawings.

source power wiring Models equipped for 115/230V, 50/60 Hz operation will be set up at the factory for 115V, 60 Hz. Your Kepco representative, in addition to providing import and warranty services, will usually also be able to assist you in the matter of local power cords, and setting the source power to conform with the local mains. (Note: the "PRM" Models with suffix "–50" are factory-wired for 230V a-c, 50 Hz).

(1) d-c value is for external sensing and feedback with a 1 volt sample.

ABC power supplies are bench-style units made in two groups. This page describes the low voltage models, 0–2 volts to 0–100 volts. The *High Voltage* section of the Kepco Catalog lists ABC models from 0–200 volts to 0–2500 volts. ABC power supplies have a single stabilization channel, controlled by a differential transistor amplifier driving a linear series-pass output stage.

INFLUENCE QUANTITY		OUTPUT EFFECTS	
		VOLTAGE MODE	CURRENT MODE (2) (External Sensing)
SOURCE: 105–125/210–250V a-c		<0.05% or 1 mV (3)	<0.1%
LOAD: No load – full load		<0.05% or 1 mV (3)	<0.5%
TIME: 8-hours [drift]		<0.05% or 3 mV (3)	<0.1% or 1 mA (3)
TEMPERATURE: Per °C		<0.05%	<0.1%
UNPROGRAMMED OUTPUT DEVIATION (4) (Ripple and noise)	rms	<0.25 mV	<0.1% of I_o max.
	p-p (5)	<2.5 mV	<1% of I_o max.

(2) Current control using current feedback around the voltage channel derived from a 1 volt sample across an external current sensing resistor.

(3) Whichever is greater.

(4) One terminal must be grounded or connected so that common mode current does not flow through the load or through a current-sensing resistor.

(5) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: ABC are full-range, programmable power supplies. They can be programmed or set to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output voltage is controlled continuously throughout 100% of the range by a panel-mounted, 10-turn rheostat. External voltage control can be exercised by a resistance (1000 ohms per volt) or by a control voltage.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The ABC is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by a single-turn panel adjustment over the range 25% to 150% I_o max. For the precision control of current, the voltage control channel may be reconnected so as to sample the drop across an external current-sensing resistor in the minus (−) output lead. Using an external current feedback rheostat, the current range is 1 milliampere to 100% I_o max. For similar units in which the main control channel is committed to current stabilization, please see the CC models in the *Special Purpose* section in the Kepco Catalog.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:
The time required for a stabilized voltage to recover within the load effect band (or 2mV, whichever is greater) is less than 50 µs.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:
As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the CC models in the *Special Purpose* section of the Kepco Catalog.

PROGRAMMING SPEED: The rate at which ABC responds to a step program is determined by the current limit setting, the load resistance and the tabulated output capacitance. For fast programming applications, please see the OPS Group II in the *High Speed* section of Kepco's Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The table gives these values for each ABC model.

GENERAL

SERIES/PARALLEL: Units can be connected in series or in parallel. Terminals are provided for master/slave interconnection.

ISOLATION FROM GROUND: The circuit and output terminals of ABC have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption approximately 30 watts for the "A" size units; 50 watts for the "B" size units. Power factor 0.9. All models are equipped with a nondetachable, 3-wire molded line cord.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +50°C. Cooling is by natural convection. Full output current is delivered at +50°C; no derating or external heat sink is required.

STANDARDS: ABC bench supplies are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: D-C output, sensing and control functions are terminated at a rear-mounted barrier-strip. Front panel binding posts carry d-c output and ground.

METERS: A single 2½-inch, 2% combination voltmeter/ammeter is provided, together with a selector switch. A separate position on this switch shorts the output internally to facilitate the setting of the current limit adjustment.

MOUNTING: ABC power supplies may be mounted in standard 19-inch equipment racks by the use of rack adapter RA–5 (for a single unit) or RA–4 for two units side-by-side. ABC power supplies can be mounted in the RA–24 rack mount system by use of adapter RAP 24–45.

Model RA–4 Rack Adapter	Price: $20.00.
Model RA–5 Rack Adapter	Price: $20.00.
Model RA–24 Rack Adapter	Price: $25.00.
Model RAP 24–45 Panel Adapter	Price: $15.00.

	p-p(5)	See table	<0.5% of I_o max

(2) Whichever is greater.

(3) Specifications are based on external current sensing and feedback using a 10-volt sample.

(4) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.

(5) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: ABC are full-range, programmable power supplies. They can be programmed or set to any level within their rated range and be fully loaded at any output setting. An exception is Model ABC 2500M, which, when programmed by external *voltage* signal, is restricted to the upper two-thirds of the range determined by its voltage control setting.

CONTROL/PROGRAMMING: Output voltage is controlled from the panel by a combination of a 10-position decade step switch and 10-turn vernier control. The models ABC 200M and ABC 425M use the 10-turn control alone. External voltage control can be exercised by a resistance (1000 ohms per volt) or by a control voltage delivering 0 to +1 milliampere into the summing junction with respect to the plus (+) output terminal (see restriction, Model ABC 2500M, above).

CURRENT STABILIZATION

The ABC–Hybrid group of power supplies are equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by a single turn panel adjustment over the range 25% to 150% I_o max. An internal factory-set adjustment to limit at approximately 150% current is provided on Models ABC 1000M, ABC 1500M and ABC 2500M. For the precision control of current, the voltage control channel may be reconnected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. Using an external current feedback rheostat, the current range is 1 milliampere to 100% I_o max.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:

The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:

As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the OPS Group IX models in the Kepco Catalog.

PROGRAMMING SPEED: The rate at which the ABC responds to a step-program is determined by the current limit setting, the load resistance and the tabulated output capacitance. For fast programming models, please see the OPS Group IX in the *High Speed* section of the Kepco Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each ABC–Hybrid model.

GENERAL

SERIES/PARALLEL: Units can be connected in series only up to the limit of their isolation voltage (1000V). They may be used in parallel for added current. Terminals are provided for master/slave interconnection.

ISOLATION FROM GROUND: The circuit and output terminals of the ABC–Hybrid have no d-c connection to ground, and may be floated up to 1000 volts (d-c or peak) off ground. The common mode current from output to ground is less than 50 microamperes rms, 500 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. All models are equipped with a nondetachable, 3-wire molded line cord, plug Pattern No. 1. (See page 111 of the Kepco Catalog.)

AUXILIARY OUTPUT: Models ABC 200M and ABC 425M feature a 6.3V a-c, 2A filament output.

BHK power supplies are bench/rack style instruments offering both voltage and current stabilization with automatic crossover between the voltage and current operating modes. Additionally, BHK power supplies can be converted (by internal strapping) for high-speed voltage programming or fast-recovery current stabilization. The voltage and current stabilization channels are each controlled by differential transistor amplifiers driving a high voltage vacuum tube output stage.

INFLUENCE QUANTITY		OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE (Internal Sensing)	VOLTAGE AMPLIFIER OFFSETS		VOLTAGE REFERENCE (Internal)
				ΔE_{io}	ΔI_{io}	
SOURCE: 105–125/210–250V a-c		<0.005% or 1 mV(1)	<100 μA	<1 mV	<10 nA	0.001%
LOAD: No load – full load		<0.01% or 1 mV(1)	<100 μA	<1 mV	<10 nA	–
TIME: 8-hours [drift]		<0.01% or 2.0 mV(1)	<0.01% or 20 μA(1)	<50 μV	<50 nA	0.005%
TEMPERATURE: Per °C		<0.01%	<0.05% of I_o max	<100 μV	<50 nA	0.005%
UNPROGRAMMED OUTPUT DEVIATION:(2) (Conventional mode)	rms	<1 mV	<100 μA	–	–	–
	p-p(3)	<10 mV	<1 mA	–	–	–
UNPROGRAMMED OUTPUT DEVIATION:(2) (High speed mode)	rms	<50 mV	<500 μA	–	–	–
	p-p(3)	<500 mV	<5 mA	–	–	–

(1) Whichever is greater.

(2) One terminal grounded or connected so that the common mode current does not flow through load or (in current mode) through a sensing resistor. Unprogrammed output deviation is the same as "ripple and noise."

(3) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: BHK are full-range, programmable power supplies. They can be programmed or set to any level within their rated range and can be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 500,000 volts/volt.

CONTROL/PROGRAMMING: Output voltage is controlled from the panel by a combination of 10-position decade switch and 10-turn vernier control. This arrangement provides 0.005% resolution yet does not inhibit the ability to sweep program a BHK linearly through its entire range. External control can be exercised by a resistance (1000 ohms per volt) or by a control voltage, delivering 0 to +1 milliampere into the summing junction with respect to the plus (+) output/sense terminal. External signals can be substituted for, or summed with, the internal reference for additional control. Operationally, the BHK is a 3-terminal, unipolar, inverting, d-c power amplifier in which the plus (+) output/sensing terminal serves as common between the output and an external programming signal. For control with respect to the minus (–) output/sensing terminal, see Model NTC–2000. For isolated digital control, see the type SN digital programmers in the *Programming Accessories* section of the Kepco Catalog.

OFFSETS: The equivalent offset voltage and current variations for BHK are tabulated for the effect of source, load, temperature, and time changes. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the combination of feedback rheostat (panel voltage control) and decade step switch. R_i is the input resistor from the reference, E_r. Part of R_r is a trimmer to calibrate the control current at 1 milliampere for exact 1000-ohms-per-volt programming. Internal trimmers are also provided to zero or null the initial offset voltage, E_{io} and offset current, I_{io}.

REFERENCE: A +6.2V ±5%, 1 milliampere reference [referred to the (+) output/sense terminal] is provided for control purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The BHK is equipped with a built-in current sensing and control for precision current stabilization with automatic crossover from and to the voltage stabilization mode.

OUTPUT RANGE: Current is controlled by a 10-turn panel-mounted potentiometer over the range 0.2–100% I_o max.

CONTROL/PROGRAMMING: Current may be externally controlled (programmed) by a remote rheostat (approximately 1000 ohms programs full scale current) or by means of an external signal with respect to the (+) output terminal. The current control circuit is compatible with the Kepco SN digital programming system.

Note: Current can also be controlled with a BHK by using the *voltage channel*, connected so as to sample the drop across an external current sensing resistor in the plus (+) output lead. An external current feedback rheostat will control current from approximately 1 mA to I_o max.

MODE FLAG: A pair of panel lamps indicate whether the voltage channel or the internally-sensed current channel has control of the output. A switched 115V a-c (10 watt maximum) signal is provided at terminals on the rear barrier-strip when BHK is in current mode.

DYNAMICS

BHK can be converted (internally strapped) for either "conventional-speed" operation with energy storage output and feedback capacitors or as a "high speed" unit with only such feedback capacitance (selectable) as is required for stability.

The conventional mode is recommended for most voltage stabilization applications for minimum output noise and best load transient response. The high-speed mode is recommended for maximum voltage agility. This mode would be selected for best response to step or dynamic programming of the output voltage or for fastest recovery time as a current stabilizer into a dynamically changing load. See preface to the High Speed section of Kepco's Catalog for a further discussion of the High Speed models.

CONVENTIONAL SPEED DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: The time required for stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 μsec.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery is given by the ratio of the current setting to the tabulated output capacitance.

PROGRAMMING SPEED: Conventionally strapped BHK models respond to step programs at a rate determined by the current limit setting, the load resistance and the tabulated output capacitance.

HIGH SPEED DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate-of-change that can be obtained by overdriving or forcing): More than 0.5 volt per microsecond.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 800 pF to 6000 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: $f\ max = 0.5 \times 10^6/\pi E_{pp}$, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for the conventional and high speed strappings of each BHK model.

LOAD REACTANCE: Strapped for "high speed" operation, BHK power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the BHK to drive most cable or harness capacitance up to this limit without loss of speed. To drive larger capacitances, the BHK should be strapped for conventional-speed use.

GENERAL

SERIES/PARALLEL (strapped for conventional speed dynamics): Units can be connected in series (up to the rated isolation) or in parallel. Terminals are provided for master/slave interconnection.

ISOLATION FROM GROUND: The circuit and output terminals of BHK have no d-c connection to ground and may be floated up to 1000 volts (d-c or peak) off ground. The common-mode current from output to ground is less than 100 microamperes rms, 1 milliampere peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENTS: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption approximately 500 watts. Power factor 0.9. Internally fused. All models equipped with a detachable 3-wire line cord.

TEMPERATURE RATINGS

Storage: –40°C to +85°C.

Operating: –20°C to +55°C. Cooling is by natural convection. Full output is delivered at +55°C; no derating or external heat sink is required.

TERMINALS: D-C output, sensing and control terminals are brought out on a rear-mounted barrier-strip. The front panel carries the d-c output and ground on safety (recessed) connections, for which mating plugs are provided. The strapping connections for conversion from standard to high speed mode (and vice versa) are internal.

METERS: A pair of 2½-inch, 2% meters monitor output voltage and output current.

MOUNTING: BHK power supplies are dimensioned to fit directly in a 19-inch rack or cabinet, occupying 5¼ inches of panel space. Detachable feet are provided for bench-top use.

DIMENSIONS

English measure: $5\frac{7}{32}$"H x 19"W x $16\frac{5}{16}$"D behind panel.

Metric measure: 132.6 H x 482.6 W x 414.3 D mm.

FINISH: The panel is finished in light gray, Color 26440 per Fed. Std. 595.

KEPCO POWER SUPPLIES

BKF

BKF offer stabilized voltage, adjustable over a narrow "slot" and protected by a re-entrant (foldback) current limiter. Designed for powering sensitive logic elements, the BKF models feature a built-in overvoltage crowbar. BKF Group I output is in the 15 and 25 watt range in a package similar to PAT and CCP. BKF Group II have output in the 100 watt range and can be purchased with or without a protective dust cover (Option "C").

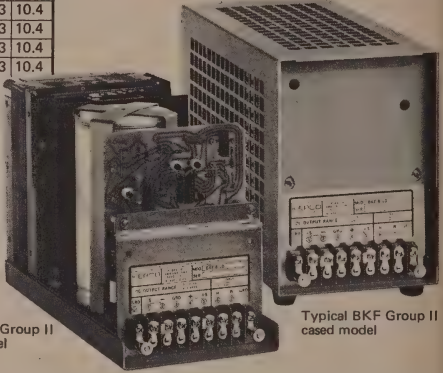
	p-p(4)	<3 mV

(2) Whichever is greater except 5 mV for Model BKF 1.25–7.
(3) One terminal grounded, or connected so that common-mode current does not flow through load.
(4) 20 Hz to 10 MHz.



Typical BKF Group II uncased model

Typical BKF Group II cased model

VOLTAGE STABILIZATION

OUTPUT RANGE: Adjustable ±10% around the rated nominal value.

CONTROL: Voltage control is by a built-in, screwdriver adjustment. There is no provision for external programming control.

REMOTE ERROR SENSING: Separate voltage-sensing terminals permit a 4-wire connection to the load. The BKF will compensate for static load effects up to 0.5 volt drop per power lead. An additional 1 volt is provided in the output for this purpose.

CURRENT LIMITING

A re-entrant (foldback) output limiter operates for loads outside of the operating range. The point at which limiting occurs is adjustable from 10% to 110% of the power supply's current ratings.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:

The time required for the stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 microseconds (Current step, 25–100% and 100–25%).

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by thy load effect. See the *Applications Notes* in the Kepco Catalog. At frequencies above the stabilizer's cutoff, the impedance increase with frequency becomes asymptotic to a characteristic series inductance. The model table gives these values for each BKF model.

OVERVOLTAGE CROWBAR

All models are equipped with an independent voltage-sensing circuit to trip an SCR crowbar in the event of excess voltage. The crowbar trip voltage is normally fixed and is tabulated for each model.

OVERVOLTAGE CROWBAR SPECIFICATIONS:

Trigger time: Less than 10 microseconds.

Reset: Interrupt source power and reduce excess voltage.

Adjustable trip point (optional, add suffix "–V" to the model number): This option provides an adjustment of the crowbar's trip voltage from −10% E_o nominal to +20% E_o nominal.

Price for "–V" option: Add $15.00 to the price.

Threshold: Allow 5% of E_o max. or 0.5 volt, whichever is greater. Crowbar setting should account for a −4% warm-up settling effect.

Temperature effect (on crowbar's trip voltage): −0.1% per °C.

GENERAL

ISOLATION FROM GROUND: The circuit of BKF is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SERIES/PARALLEL: There is no provision for series or parallel operation.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power must be hard-wired to the provided terminals. Internally fused. Source current tabulated at 125V a-c. Power factor 0.9.

TEMPERATURE RATINGS

Storage: -40°C to +85°C.

Operating: 0°C to +55°C. Full output current rating to +55°C. No derating. Cooling is by natural convection. No external heat sink is required.

STANDARDS: BKF Group I models are designed and tested in accord with the NEMA standard for stabilization power supplies, d-c output, Publication No. PY-1-1972. Additionally, BKF Group I models are recognized under the component program of Underwriters' Laboratories, Inc., UL478 and UL114.

TERMINALS: All input, output and sensing connections are made via a single multiterminal barrier-strip.

MOUNTING: The BKF models will mount to your chassis using 6-32 hardware into recessed captive nuts.

19-inch rack mounting adapter panels include:

BKF–I MODELS	BKF–II MODELS
RA 26–1 for a single module.	RA 25–1 for a single module.
RA 27–2 for two modules.	RA 8–2 for two modules.
RA 28–4 for four modules.	RA 9–3 for three modules.

Rack adapters are $15.00 each. Please refer to the *Hardware* section for a description.

KEPCO POWER SUPPLIES

BOP
BIPOLAR OPERATIONAL

The Bipolar Operational Power Supply combines the capabilities of fast-programmable power supplies like the OPS, with a bi-directional complementary-symmetry output stage that can respond in either direction from zero. The BOP is, in effect, a large, d-c coupled, inverting power amplifier. It is made in a bench/system rack form with a single control channel equipped with a patch-board panel for easy access to the control functions. For a modular version, suited to OEM applications, please see the BOP listings in the *Modular* section of the Kepco Catalog.

(3) One terminal grounded, or connected so that the common mode current does not flow through the load or (in current mode) through a sensing resistor.

(4) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: The unique character of the BOP, ability to operate with either positive or negative output, bidirectionally, as a source, is enhanced by its ability to function as a limited *sink*. BOP is a *"sink"* when the polarity of its voltage does not agree with the direction of its current–it absorbs energy.

If voltage and current are plotted orthogonally, as in Figure 1, quadrants I and III are the source quadrants, II and IV are sink quadrants. The operating region of a BOP is defined by the shaded portion of the output characteristic.

CONTROL/PROGRAMMING: BOP models have a front panel patch board with a built-in vernier voltage feedback rheostat and bipolar reference. Output voltage is controlled by controlling the reference potentiometer from the plus (+) to the minus (−) reference through zero. The output voltage is proportioned to the selected reference by the feedback rheostat. The patch board construction makes it easy to sum or substitute other potentials at the input and to substitute external feedback to stabilize current or such physical phenomena–heat, speed, force, or electrochemical action.

OFFSETS: The equivalent offset voltage and current variations for BOP are tabulated for the effect of source changes, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the main control channel's voltage offset (E_{io}) and current offset (I_{io}) can be nulled (zeroed) by built-in trimmers.

REFERENCES: A pair of ±6.2V ±5%, 1 milliampere references referred to the common/sense terminal are provided for offsetting or biasing purposes.

GAIN: The open-loop d-c gain is in excess of 35,000 volts/volt.

CURRENT STABILIZATION

The BOP is equipped with a pair of built-in current-sensing and feedback arrangements for protective limiting. They are set for approximately 110% of the rated current in both directions and are not adjustable.

For the precision control of current, bidirectionally, the feedback to the main control channel can be reconfigured so as to sample the drop across an external current-sensing resistor in the common output lead.

DYNAMICS

Each BOP is equipped with an internal, fast/slow selector switch. The slow position restricts the bandwidth so that the BOP can drive reactive loads without restriction. The slow position is recommended for low frequency or d-c application to discrimminate against higher frequency pick-up noise. In the fast position, load capacitance should be restricted to less than 0.01 microfarad to avoid oscillation with near 100% feedback.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. As a voltage stabilizer, the d-c and low frequency value is given by the load effect. At frequencies above the stabilizer's cutoff, the impedance increase with frequency becomes asymptotic to the tabulated characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to the tabulated characteristic shunt capacitance. The table gives these values for each BOP model.

DISTORTION: For a small signal (2 volts peak-to-peak, no load), harmonic distortion is less than 0.5%.

BANDWIDTH/PROGRAMMING SPEED: The dynamics of the BOP output may be expressed in both the time domain (as its response to a step-program) or in the frequency domain (bandwidth for large and small signals). These figures are tabulated below.

a-c SPECIFICATION	MODE SWITCH	BOP 15–20M	BOP 36–1.5M	BOP 36–5M	BOP 72–1.5M	BOP 72–5M
SMALL SIGNAL FREQUENCY RESPONSE frequency at which the open loop gain becomes unity	FAST SLOW	300 kHz 10 kHz	300 kHz 30 kHz	300 kHz 30 kHz	300 kHz 30 kHz	300 kHz 30 kHz
LARGE SIGNAL FREQUENCY RESPONSE frequency at which the fully modulated, fully loaded output reaches 3% harmonic distortion	FAST SLOW	25 kHz 1 kHz	30 kHz 3 kHz	30 kHz 3 kHz	20 kHz 2 kHz	20 kHz 2 kHz
AMPLIFIER SLEWING RATE	FAST SLOW	2V/μsec. 0.1V/μsec.	7V/μsec. 0.7V/μsec.	7V/μsec. 0.7V/μsec.	9V/μsec. 0.9V/μsec.	9V/μsec. 0.9V/μsec.
PROGRAMMING TIME CONSTANT input/feedback set for gain = 10	FAST SLOW	12 μsec. 250 μsec.	12 μsec. 150 μsec.	12 μsec. 150 μsec.	12 μsec. 150 μsec.	12 μsec. 150 μsec.

GENERAL

SERIES/PARALLEL: Units may be connected in series for added voltage, using a master/slave interconnection for shared voltage. They cannot be used in parallel.

ISOLATION FROM GROUND: The circuit and output terminals of BOP have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes, peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENTS: Units are factory-wired for 105–125V a-c, 50–65 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–65 Hz. The two ±36V BOP models (in a half-rack package) are protected by a fuse. The two ±72V models and the ±15V unit (in the full-rack size) are protected by a circuit breaker. All models incorporate a low-source voltage monitor which trips an internal clamp at turn-off (precluding overshoot). A timing circuit delays reapplication of source power for approximately 2 seconds.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +65°C. Cooling is by built-in, sealed-bearing blowers exhausting to the rear. Full output current is delivered at +65°C. No derating, or external heat sink is required.

STANDARDS: BOP models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: BOP models are equipped with a 10-terminal patch board through which convenient access is had to the signal input, output, feedback, and reference points. The front panel connections are duplicated on a rear-mounted barrier-strip.

METERS: Half-rack models use a single 2-inch recessed meter for reading d-c volts and amperes and a-c (rms) volts. Accuracy is ±3%. The full-rack models have independent 3-inch recessed meters with ±2% accuracy. Meters are designated by the suffix "–M." To order an unmetered model (without the patch panel and the feedback and reference potentiometers), see the BOP listing in the *Modular* Section of the Kepco Catalog.

MOUNTING: The "full-rack" sized models have accessory flanges for direct installation in standard 19-inch racks. Half-rack sized models may be mounted in RA–24 or RA–32.

CC 21–1M	0–1	0–21	420 kΩ + 2.0 μF	266.00	8	3.6
CC 40–0.5M	0–0.5	0–40	1.6 MΩ + 1.0 μF	266.00	8	3.6
CC 72–0.3M	0–0.3	0–72	4.8 MΩ + 0.6 μF	266.00	8	3.6
CC 100–0.2M	0–0.2	0–100	10 MΩ + 0.4 μF	266.00	8	3.6

The CC plug-in power supply modules are current stabilizers with built-in, dual-range, current-sensing resistors and 10-turn panel-mounted current control. The CC module has a single control channel with an I-C front end for low offsets and exceptional stability. The CC offers a full complement of meters and controls on a compact 1/6th rack width panel. They can be installed in rack housings RA 22–6A or RA–32 for systems use, or in a variety of bench-style enclosures.

INFLUENCE QUANTITY		OUTPUT EFFECTS CURRENT MODE
SOURCE: 105–125/210–250V a-c		<0.0005% or 0.2 μA(1)
LOAD: 10% load – 100% load		<0.005% or 2 μA(1)
TIME: 8-hours [drift]		<0.02% or 2 μA(1)
TEMPERATURE: Per °C		<0.01%
UNPROGRAMMED OUTPUT DEVIATION:(2) (Ripple and noise)	rms	<0.02% of selected scale
	p-p(3)	<0.1% of selected scale

(1) Whichever is greater.

(2) One terminal grounded or connected so that the common-mode current does not flow through the load or through the sensing resistor.

(3) 20 Hz to 10 MHz.

CURRENT CONTROL CHANNEL

OUTPUT RANGE: CC current stabilizers have two output ranges selected by a panel-mounted switch 0–100% I_o or 0–10% I_o. They can be set or programmed to any level within the selected range and can be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output current is controlled by a panel-mounted, 10-turn rheostat. External control can be exercised by a resistance (0–10,000 ohms controls the current through the selected range) or by a control voltage delivering 0–100 microamperes. Control is fully operational with the CC power supplies functioning as inverting d-c power amplifiers with current-sensitive feedback to the summing junction. Their plus (+) output terminal is common.

For isolated digital control, see the type SN digital programmers in the *Programming Accessories* section of Kepco's Catalog.

VOLTAGE LIMITING

The maximum open circuit voltage limit of the CC current stabilizer is fixed at approximately 150–200% of the rated load compliance voltage.

DYNAMICS

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:
The current recovery is an exponential, given by the RC product of the load and tabulated output capacitance—or is a slope defined by the ratio of current setting to output capacitance.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. At frequencies above the stabilizer's cutoff, the impedance decrease with frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each CC model.

LOAD REACTANCE: Fast-slewing power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in roll-off control (lag) networks will allow the CC to drive most cable or harness capacitances up to this limit. When driving major inductive loads, a series diode is recommended for the protection of the CC.

GENERAL

SERIES/PARALLEL: Parallel operation of current sources may be made without restriction. CC power supplies are not equipped for series operation.

ISOLATION FROM GROUND: The circuit of the CC current stabilizer is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. Common-mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption approximately 50 watts; power factor 0.9. Internally fused. A pilot light and on/off switch are provided on the panel.

TERMINALS: Source power, d-c output, sense, and control connections terminate on a male PC connector that mates with the built-in socket in the bench housings or with the rack housings (see *Hardware* section of Kepco's Catalog). A pair of output terminals are provided on the front panel.

STANDARDS: CC modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Cooling is by natural convection. Full output is delivered at +71°C. No derating or external heat sink is required.

METERS: Voltage and current are displayed on a pair of recessed 2-inch ±3% meters. Current is measured in two ranges corresponding to the full scale selector. Both meters are driven from an isolation amplifier so that they do not load the output.

CCP 100–0.2	0–0.2	0–100	10 MΩ + 0.4 μF	193.00	6	2.7

The Kepco CCP is a current stabilized, d-c power module equipped with an internal current-sensing resistance. It is normally controlled or programmed by an external variable resistance, but may also use an optional internal control. A built-in, adjustable voltage limiter sets the maximum open circuit voltage. The current control channel employs an integrated circuit front end for excellent short-term stability. This channel features capacitorless output filtering so that the CCP may drive dynamically varying loads without the transients generated by large shunt capacitances.

INFLUENCE QUANTITY		OUTPUT EFFECTS CURRENT MODE
SOURCE: 105–125/210–250V a-c		<0.0005% or 0.2 μA(1)

	p-p(3)	<0.1% of I_o max.

(1) Whichever is greater.

(2) One terminal grounded or connected so that the common-mode current does not flow through the load or through the sensing resistor.

(3) 20 Hz to 10 MHz.

CURRENT CONTROL CHANNEL

OUTPUT RANGE: CCP current stabilizers can be programmed (or set with the optional current control trimmer, option "–P") anywhere in the range 0–100% I_o. They may be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output current is operationally controlled by resistance or external voltage signals. The sample voltage across the internal current-sensing resistor is approximately 1 volt at rated maximum current. The external resistance needed for full range control is 0–1000 ohms through which passes approximately 1 milliampere. The option "–R" provides a means of calibrating the control current at 1.0 milliampere. The option "–P" provides for a built-in current control rheostat. For control near zero current, the zeroing option "–E" is recommended.

For isolated digital control, see the type SN Digital Programmers in the *Programming Accessories* section of the Kepco Catalog.

REFERENCE: + 6.2V d-c ±5% with respect to the plus (+) error-sense terminal, capable of supplying up to 1 milliampere.

VOLTAGE LIMITING

OUTPUT RANGE: Adjustable from 0.1 volt to 110% of the rated maximum voltage.

CONTROL/PROGRAMMING: The voltge limit is controlled normally by an internal rheostat. An external rheostat (approximately 1000 ohms per volt) may be connected in series with the internal trimmer in order to control the voltage limit externally.

REMOTE ERROR SENSING: Separate error-sensing terminals are provided for the voltage limiting circuit so that you can establish the maximum voltage at a remotely located load irrespective of the voltage drop in the connecting wires (up to 0.5 volt maximum per wire).

DYNAMICS

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:
The current recovery is an exponential, given by the RC product of the load and tabulated output capacitance—or is a slope defined by the ratio of current setting to output capacitance.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. At frequencies above the stabilizer's cutoff, the impedance decrease with frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each CCP model.

LOAD REACTANCE: Fast-slewing power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the CCP to drive most cable or harness capacitances up to this limit. When driving major inductive loads, a series diode is recommended for the protection of the CCP.

GENERAL

SERIES/PARALLEL: Parallel operation of current sources may be made without restriction. CCP power supplies are not equipped for series operation.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power must be hard-wired to the provided terminals. Internally fused; power consumption approximately 60 watts; power factor 0.9.

ISOLATION FROM GROUND: The circuit of the CCP module is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. Common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz

TEMPERATURE RATINGS

Storage: -40° to +85°C.

Operating: -20°C to +65°C. Full output is delivered at +65°C without derating. Cooling is by natural convection; no external heat sink is required.

STANDARDS: CCP modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: All input, output and control connections are made via a multiterminal barrier-strip.

MOUNTING: The CCP will mount to your chassis using 6-32 hardware into recessed captive nuts. 19-inch rack mounting adapter panels include:
- RA 26–1 for a single module.
- RA 27–2 for two modules.
- RA 28–4 for four modules.
- Rack adapters are $15.00 each.

DIMENSIONS

English measure: 3 11/32"H x 6 3/8"W x 4 7/8"L.

Metric measure: 84.9 H x 161.9 W x 123.8 L mm.

See outline drawings.

FINISH: Black anodized aluminum. The rack adapter panels are painted light gray Color 26440, Fed. Std. 595.

OPTIONS (add identifying letters as a suffix to model number):

Suffix "–E": Offset voltage nulling: This control zeros the fixed part of the current channel control amplifier voltage offset; extends the control setting range to zero. Price: $10.00.

Suffix "–P": Built-in output current control: An internal 1000-ohm rheostat for local control of the output current. Price: $25.00.

Suffix "–R": Calibration adjustment: A ±10% trimmer permits calibration of the control current at 1 milliampere, so that current is controlled by exactly 1000 ohms, full scale. Price: $10.00.

Suffix "–VM": Remote voltage monitor: This option provides a voltage repeater amplifier to reproduce the load's voltage for metering purposes (so that an external meter does not act as a shunt load) delivers 0–1 milliampere. Price: $15.00.

CPS

COMPUTER I-C

CPS power supplies are especially designed for driving digital logic, RTL, DTL, TTL, ECL, MOS. . . . They feature exceptional stability and a low noise output, provided by the integrated front end on the *linear* voltage control channel. Load current is limited and adjustable. An integral overvoltage crowbar is standard on all CPS models. CPS units are also available unmetered, in modular form for OEM's.

TIME: 8-hour [drift]		<0.01% or 1 mV(2)	<0.02%	<20 μV	<2 nA	0.005%
TEMPERATURE: Per °C(3)		<0.01%	<0.02%	<20 μV	<5 nA	0.005%
UNPROGRAMMED OUTPUT DEVIATION:(4) (Ripple and noise)	rms	<0.2 mV	<0.02% of I_o max	–	–	–
	p-p(5)	<2.0 mV	<0.2% I_o max	–	–	–

(1) External current sensing, using the *voltage* amplifier. Effects are measured for a 1-volt current sensing voltage drop.

(2) Whichever is greater.

(3) Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.01% per °C externally sensed current mode. See option "–T."

(4) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.

(5) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: CPS power supplies may be adjusted or programmed to any level within their rated range and may be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output voltage is controlled continuously throughout the range by a panel-mounted, 10-turn control. External control can be exercised by resistance (1000 ohms per volt—calibrated by built-in control) or by an external control voltage.

For isolated digital control (with memory) see the type SN digital programmer in the *Programming Accessories* section of the Kepco Catalog. Control is fully operational with CPS functioning as an operational power amplifier with its plus output sensing terminal common. For control with respect to the negative output sense terminal, see Model NTC–200.

OFFSETS: The equivalent offset voltage and current variations for the CPS's voltage control channel are tabulated for the effect of source changes, load, temperature and time. Their effect on the output may be calculated from the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the external feedback rheostat and R_i is the input resistor from the reference, E_r. Option "–E" provides a control for zeroing the fixed or initial part of the offset voltage, E_{io}.

GAIN: The open-loop d-c gain is in excess of 0.5×10^6 volts/volt.

REFERENCE: +6.2V d-c ±5% with respect to the plus (+) error sense terminal, capable of supplying up to 1 milliampere.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The CPS power supplies are equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by a panel-mounted multiturn control over the range 10% to 105% of I_o maximum. For the precision control of current, the voltage control channel may be reconnected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. Using an external current feedback rheostat, the current range is 1 milliampere to 100% I_o max. Models equipped with option "–E" can be controlled from approximately 1 microampere to 100% I_o max.

Note: The range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:

The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 μs.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:

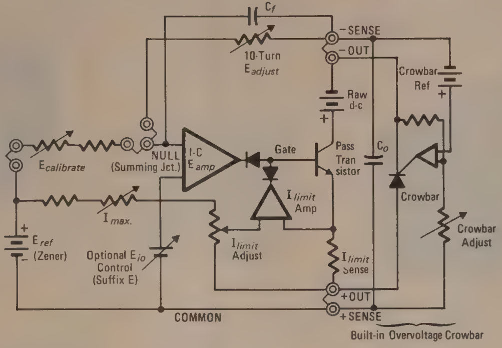
As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the OPS Groups V, VI, VII and VIII in the Kepco Catalog.

PROGRAMMING SPEED: The rate at which CPS responds to a step program is determined by the current limit setting, the load resistance and the tabulated output capacitance. For fast programming response units, please see the OPS Groups V, VI, VII and VIII in the *High Speed* section of the Kepco Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c

Data and prices subject to change without notice

all KEPCO products are backed by a firm 5-Year Warranty



SIMPLIFIED SCHEMATIC DIAGRAM

and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The table gives these values for each CPS model.

OVERVOLTAGE CROWBAR

A voltage-triggered crowbar is included as standard equipment on all CPS models. This provides a voltage-triggered electronic "short" across the output terminals if the voltage exceeds the set level. The setting adjustment is accessible through the front panel. The crowbar is linked to the main on/off circuit breaker. Crowbar trigger time 5 to 10 microseconds with an adjustable delay capacitor (to minimize the false alarm rate).

Crowbar setting range: 3 volts (minimum) to 20 volts d-c.

Crowbar threshold: 5% of E_o or 0.25 volt, whichever is greater. Initial setting should account for −2% warm-up settling drift.

Crowbar temperature effect coefficient: 0.05% per °C.

GENERAL

SERIES/PARALLEL: CPS models can be operated together in series, up to the 500V isolation limit, and can be interconnected for master/slave tracking. CPS cannot be paralleled because of their crowbar.

ISOLATION FROM GROUND: The circuit and output terminals of CPS power supplies have no d-c connection to ground and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENTS: Units are factory-wired for 105–125V a-c, 50–65 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–65 Hz. Power consumption is tabulated for each model; power factor 0.9. All models are protected by a combination on/off switch and circuit breaker. Units are equipped with a 3-wire line cord. The "1/4" and "1/2" rack units use plug Pattern No. 1; "full-rack" models use plug Pattern No. 2. See page 111 in the Kepco Catalog.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C without derating. Cooling is by means of a built-in, sealed-bearing blower (two in the full rack sized models) exhausting to the rear.

STANDARDS: CPS models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: The d-c output terminations are binding posts or pressure clamps (for the heavy current units) located on the rear. All sensing and control connections are made via a multiterminal barrier-strip.

METERS: Voltage and current are displayed on a pair of 2-inch recessed meters with an accuracy of ±3%.

MOUNTING: Full-rack sized models rack-mount directly with accessory flanges (also predrilled for slides, Jonathan type 110 QD 20-2, 22-2 or 24-2). The quarter-rack and half-rack sized units are designed for rack-mount installation in type RA–24 or RA–32 drawers. Unmetered modular format models are also available, see the *Modular* section of the Kepco Catalog.

Model RA–24 Rack Adapter	Price: $25.00.
Model RA–32 Rack Adapter	Price: $75.00.

KEPCO™ POWER SUPPLIES

MODEL	d-c OUTPUT RANGE VOLTS	d-c OUTPUT RANGE AMPS	OUTPUT IMPEDANCE VOLTAGE MODE dc OHMS + SERIES L	PRICE	SHIP WGT. lbs.	SHIP WGT. kg.
DTM 2X16–0.6	0 to +16 0 to −16	0 to +0.6 0 to −0.6	13 mΩ + 1 μH	$156.00	5	2.3

DTM
MODULAR

The Kepco DTM design provides, in a single package, a pair of voltage stabilizers controlled by a single adjustment. The two outputs are positive and negative with respect to a common center, and track so as to maintain output symmetry. The DTM is ideal for powering Op-amps and other linear circuits where supply voltage balance is significant.

INFLUENCE QUANTITY		OUTPUT EFFECTS VOLTAGE No. 1 [1]	OUTPUT EFFECTS VOLTAGE No. 2
SOURCE: 105–125/210–250V a-c		<0.05% or 2 mV[2]	<0.05% or 2 mV[2]
LOAD: No load – full load		<0.05% or 2 mV[2]	<0.05% or 2 mV[2]
TIME: 8 hours (drift)		<0.05% or 4 mV[2]	<0.05% or 4 mV[2]
TEMPERATURE: Per °C		<0.05%	<0.05%
UNPROGRAMMED OUTPUT DEVIATION:[3] (Ripple and noise)	rms	<0.5 mV	<0.5 mV
	p-p[4]	<2.5 mV	<2.5 mV

[1] Voltage No. 1 is the positive output with respect to common, which serves as the master. Voltage No. 2 tracks Voltage No. 1.

[2] Whichever is greater.

[3] One terminal grounded or connected so that common-mode current does not flow through load.

[4] 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE

Voltage No. 1: Zero to plus 16 volts.
Voltage No. 2: Zero to minus 16 volts.

CONTROL/PROGRAMMING: The two outputs are controlled by a single multiturn trimmer adjusted by screwdriver. This control operates on the plus (+) output, while the minus (-) output tracks. The tracking ratio may be adjusted by a separate trimmer which sets the minus output relative to the positive. They may be set for any ratio; e.g., 0 to +15 volts and 0 to -15 volts—or unequal voltages; e.g., 0 to +12 volts and 0 to -6 volts. When set for equal voltage, the outputs will track to within ±100 millivolts from 1 volt to the rated maximum output.

An external rheostat may be substituted for the master control trimmer—by means of terminals on the barrier-strip—so that remote control of the voltage can be exercised at approximately 1000 ohms per volt (not calibrated).

REMOTE ERROR SENSING: Separate voltage-sensing terminals for each output and the common permit the DTM to compensate for static load effects up to 0.5 volt per power lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT LIMITING

Each output is individually protected by an independently adjusted current limiter.

RANGE: 10% to 110% of the maximum rated current. Should a load attempt to draw current in excess of the limiter's setting, the output voltage is diminished so that the preset current limit is maintained, whatever the load.

Note: Should Voltage No. 1, the master, be the one overloaded, its diminished voltage will be tracked by Voltage No. 2 even though No. 2, itself, may not be overloaded.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 microseconds.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. At frequencies above the stabilizer's cutoff, the impedance increase with frequency becomes asymptotic to the characteristic series inductance given in the model table.

GENERAL

SERIES/PARALLEL: The two outputs of DTM share a common (center) terminal. They may be loaded individually or in series. There is no provision for parallel operation.

ISOLATION: The circuit of DTM is isolated from its chassis and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. The common-mode current from output to ground is less than 5 microamperes rms, 50 microvolts peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power must be hard-wired to the provided terminals. Source current is 0.5 ampere at 125V a-c (internally fused); power factor 0.9.

TEMPERATURE RATINGS
Storage: −40°C to +85°C.
Operating: −20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: DTM modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: All input, output and sensing connections are made via a single multiterminal barrier-strip.

MOUNTING: The DTM modules will mount to your chassis using 6-32 hardware to recessed captive nuts.

19-inch rack mounting adapter panels include:
RA 26—1 for a single module.
RA 27—2 for two modules.
RA 28—4 for four modules.
Rack adapters are $15.00 each.

DIMENSIONS

English measure: 3 11/32"H x 6 3/8"W x 4 7/8"L.
Metric measure: 84.9 H x 161.9W x 123.8 L mm.

FINISH: Black anodized aluminum.

KEPCO POWER SUPPLIES

HB
HYBRID

HB power supplies are built in a combination "bench/rack" style offering high voltage stabilization using a hybrid circuit, combining the stability of a differential transistor control amplifier with the reliability of a vacuum-tube, series-pass regulator. HB models feature a pair of auxiliary 6.5V a-c, 6A outputs for energizing tube filaments.

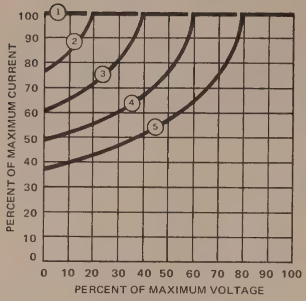

FIGURE 1: RATING CURVES

Curves represent the volt/ampere rating for range switch positions 1–5. To use, determine which position covers the desired voltage. Read the maximum current for each voltage on the left scale.

INFLUENCE QUANTITY		OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE (1) (External Sensing)
SOURCE: 105–125/210–250V a-c		<0.01%	<0.1% at rated sample
LOAD: No load – full load		<0.01% or 2 mV(2)	<0.01% at rated sample
TIME: 8-hours [drift]		<0.01% or 2 mV(2)	<0.05% or 0.2 mA(2)
TEMPERATURE: Per ° C		<0.01%	<0.05% at rated sample
UNPROGRAMMED OUTPUT DEVIATION:(3) (Ripple and noise)	rms	<1 mV	<0.01% of I_o max
	p-p(4)	<5 mV	<0.05% of I

(1) Rated sample is 10 volts d-c across an external current sampling resistor, with external current control.

(2) Whichever is greater.

(3) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.

(4) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: The HB is equipped with a 5-position range selector which divides the voltage into five bands each covering 20% of the rated voltage. The 10-turn voltage control sets the output within any 20% range. When programmed externally to a voltage *lower* than the minimum setting for the range selected, the output maximum current must be derated per Figure 1.

CONTROL/PROGRAMMING: Output voltage is controlled by the combination of 10-turn rheostat and 5-position range selector. External voltage control can be exercised by a resistance of approximately 100 ohms per volt, or by a control voltage delivering 0 to +10 milliamperes into the summing junction with respect to the plus (+) output terminal. Refer to the output current derating curve, Figure 1, for operation outside of the lower boundary of the range switch.

OVERLOAD: The HB is protected by fuses against overload or short circuit while functioning as a voltage stabilizer.

CURRENT STABILIZATION

The HB's voltage control channel may be reconnected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. So connected, and with an external current feedback rheostat, the HB output current is stabilized. The range of currents that can be controlled is 10 milliamperes to 100% of I_o max, although the current ratio for any single sensing resistor should be limited to 50:1 maximum.

The maximum load voltage compliance range for the HB as a current stabilizer is given by the derating curve (Figure 1). The maximum voltage is the upper limit of the range selector switch position. The minimum compliance voltage for any stabilized current is given by its intersection with the derating curve for that range selector switch position.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:
The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 μs.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:
As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the BHK models in this section of the catalog.

PROGRAMMING SPEED: The rate at which an HB responds to a step program (within the limits of the selector switch derating curve) is determined by the load resistance, the tabulated output capacitance and the current rating. For fast programming applications, please see the BHK models

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The table gives these values for each HB model.

GENERAL

SERIES/PARALLEL: HB models can be connected in series or (as current stabilizers) in parallel. Terminals are provided for master/slave interconnection. Series operation is limited to the maximum isolation voltage rating (600V).

Allow 2" Bend Radius for Line Cord.

ISOLATION FROM GROUND: The circuit and output terminals of HB have no d-c connection to ground, and may be floated up to 600 volts (d-c or peak) off ground. The common-mode current from output to ground is less than 50 microamperes rms, 500 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Source power requirements are tabulated in the model table. Units are protected by built-in fuse and are equipped with a 3-wire, line cord.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +55°C. Cooling is by natural convection.

STANDARDS: HB power supplies are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: D-C output, sensing and control functions, as well as the two independent 6.5-volt, 6-ampere a-c outputs, are terminated at a rear-mounted barrier-strip. Front panel binding posts carry the d-c output and ground.

AUXILIARY OUTPUTS: Each HB model offers a pair of independent 6.5-volt a-c (unstabilized) outputs, each rated for 6 amperes. These outputs may be used to power vacuum tube heater filaments or for similar tasks.

METERS: A pair of 2½-inch meters display the d-c output voltage and output current with ±2% accuracy.

MOUNTING: HB power supplies are sized for direct mounting in standard 19-inch equipment racks. Panel height is 3½-inch nominal.

DIMENSIONS

English measure: 3¹⁵⁄₃₂"H x 19"W x 14⅜"D (behind panel).

Metric measure: 88.1 H x 482.6 W x 365.1 D mm (behind panel).

KEPCO POWER SUPPLIES

JMK
AUTOMATIC CROSSOVER

The JMK is a systems-type automatic crossover (voltage/current) stabilizer. Its mechanical design, quarter-rack, is intended to minimize the panel space occupancy in conventional 19-inch racks. The unique plug-access arrangement allows for very rapid installation and demounting without fumbling with wires, screws and links. The JMK has three control channels, each with an I-C front end for maximum stability. One is committed to voltage control; the other two are reserved for current control. One via the panel control; the other for external current programming. A built-in overvoltage crowbar is standard.

(2) External current sensing, using the *voltage* amplifier. Effects are measured for a 1-volt current sensing voltage drop.

(3) Whichever is greater.

(4) Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.02% per °C internally sensed current mode; 0.01% per °C externally sensed current mode. See option "–T."

(5) One terminal grounded or connected so that the common-mode current does not flow through load or (in current mode) through a sensing resistor.

(6) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: JMK are full range, operationally programmable power supplies. They may be set or programmed to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output voltage is controlled continuously through the range by a panel-mounted, 10-turn rheostat. External control can be exercised by resistance (1000 ohms per volt with built-in calibration control) or by a control voltage. Control is fully operational with the JMK functioning as a differential operational power amplifier with its plus (+) output-sensing terminal the common.

For control with respect to the minus (–) output-sensing terminal, see Model NTC–200. For isolated digital control, see the type SN programmers in Kepco's Catalog.

OFFSETS: The equivalent offset voltage and current variations for the JMK's voltage channel are tabulated for the effect of source changes, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference, E_r. JMK has a built-in control for zeroing the fixed or initial part of the offset voltage, E_{io}.

GAIN: The open-loop d-c gain is in excess of 10^6 volts per volt.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The JMK is equipped with a built-in current sensing and control channel for precision current stabilization with automatic crossover from and to the voltage stabilization mode.

OUTPUT RANGE: Current is controlled by a 10-turn, panel-mounted potentiometer over the range 0 to 100% I_o max.

CONTROL/PROGRAMMING: Current may be externally controlled (programmed) by a remote potentiometer or small control voltage (0–1 volt for units rated under 5 amperes; 0–0.5 volt for units rated 5 amperes and more). This voltage, with respect to the plus (+) output terminal can be derived from a divider across the internal reference or from a separate programming source such as the Kepco type SN digital programmer. The external control of current is exercised through a separate control amplifier channel, gated to the regulator. This allows the panel current control to remain operative and to function as an override or programming limit control. For a wider current control range, the *voltage channel* may be connected to sample the drop across an external current-sensing resistor in the plus (+) output lead. An external rheostat will control current from 1 microampere to 100% I_o max. The maximum recommended range of currents for any single current-sensing resistor is 50:1.

MODE FLAG: JMK uses a pair of panel lamps to indicate whether it is functioning as a voltage stabilizer or as a current stabilizer. A d-c "flag" signal is also provided to the rear connector for remote signalling. This signal is ⩾5 volts in voltage mode, ⩽0 volt in current mode, referred to the plus (+) output terminal. The source impedance is 5 kilohms.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:

The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 µs.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:

A stabilized current recovers with an exponential having an RC time constant determined by the load's resistance and the value for "C," the output capacitance, given in the tables. For a fast recovery current stabilizer, see OPS Groups IV and V models in the *High Speed* section of Kepco's Catalog.

PROGRAMMING SPEED (voltage channel): The rate at which a JMK responds to a step-program is determined by the current setting, the load resistance and the tabulated output capacitance. For fast programming models, see OPS Groups IV and V in the *High Speed* section of Kepco's Catalog.

GENERAL

SERIES/PARALLEL: JMK models can be operated together in series (up to the limit of their isolation voltage, (500V) and can be interconnected for master/slave tracking. The built-in crowbar does not allow for parallel operation.

ISOLATION FROM GROUND: The circuit and output terminals of JMK have no d-c connection to ground and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENTS: An internal switch selects either 105–125V a-c or 210–250V a-c, 50–65 Hz. The JMK is shipped with the switch in the 105–125V a-c position. Units are equipped with a detachable 3-wire safety line cord, plug Pattern No. 1. (See page 111 of the Kepco Catalog.) Power factor 0.9. Each JMK is protected by a panel-mounted circuit breaker.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Full output current is delivered at +71°C without derating. Cooling is by means of a built-in, sealed-bearing blower, exhausting to the rear. Mounting should allow for air movement (generated by the blower) of approximately 10 CFM.

STANDARDS: JMK models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: All sensing and control connections to JMK are made via a rear-mounted plug connector. A mating connector is supplied, wired with jumpers for local control and sensing. Space is provided in the connector for the installation of resistors to set up the JMK for specific output levels. The mating connector is Kepco Model PC–4. Extra PC–4 connectors: $10.00 each.

Output d-c connections are made via rear-mounted binding posts.

METERS: JMK power supplies are fitted with separate 2-inch recessed ±3% voltage and current meters. Each is equipped with a 10:1 range switch for improved readability at low output levels.

MOUNTING: The JMK power supplies are "quarter-rack" sized to mount up to four abreast in the Model RA–24 rack mount drawer (5¼" panel height in a 19" wide rack). Two JMK's can be mounted in the RA–32 drawer with room for three plug-in, one-sixth rack modules.

Model RA–24 Rack Adapter	Price: $25.00.
Model RA–32 Rack Adapter	Price: $75.00.

DIMENSIONS

English measure: $5\frac{7}{32}$"H x $4\frac{5}{32}$"W x $17\frac{3}{16}$" D
(add 2 ½" for connector).

Metric measure: 132.6 H x 105.6 W x 436.6 D mm
(add 63.5 mm for connector).

FINISH: *Panel:* Two tone black and light gray.
(Color No. 26440, Fed. Std. 595.)
Case: Textured dark charcoal gray.

OPTIONS (add identifying letters as a suffix to model number):

Suffix "–T": Certified test and report for lowered temperature effect coefficient.
0.005% per °C voltage mode; 0.01% per °C (external) current mode.
Price: $30.00.

OVERVOLTAGE CROWBAR

A voltage-triggered crowbar is included as standard equipment on all JMK models. The setting adjustment and indicator are located on the front panel together with a push button that disables the crowbar so the voltage setting may be made without upsetting the output. The crowbar is linked to the main on/off circuit breaker.

Crowbar trigger time: Less than 50 microseconds.

Crowbar setting range: 4V (minimum) to 110% of E_o max.

Crowbar threshold: 5% E_o max or 0.5 volt (whichever is greater). An initial setting should account for a −2% warm-up settling effect.

Crowbar temperature effect coefficient: 0.05% per °C.

KEPCO POWER SUPPLIES

JQE
SYSTEM POWER

The JQE is a systems-type voltage stabilizer with current limiting, in a variety of ratings up to 100 watts in a "quarter-rack" package, 250–500 watts in the "half-rack" package, and up to 1000 watts in the "full-rack width" design. They occupy only 5¼ vertical inches of valuable rack space.

JQE's voltage control channel has an I-C front end for maximum stability and minimum offset. The rated power is delivered under the realistic thermal environs of a system's cabinet with no derating. The 10-turn voltage control is standard; an overvoltage crowbar is optional.

Unmetered (Modular) JQE Models are also available. See the *Modular* section of Kepco's Catalog.

	p-p (7)	<1.0 mV	<0.1% of I_o max	–	–	–

(3) External current sensing, using the *voltage* amplifier. Effects are measured for a 1-volt current sensing voltage drop.

(4) Whichever is greater.

(5) Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.01% per °C externally sensed current mode. See option "–T."

(6) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.

(7) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: JQE's are full-range, operationally programmable power supplies. They can be set or programmed to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output voltage is controlled continuously throughout the range by a panel-mounted, 10-turn rheostat. External control can be exercised by resistance at 1000 ohms per volt (with a built-in calibration control), or by a control voltage. Control is fully operational, with the JQE functioning as an operational power amplifier with its plus (+) output-sensing terminal the common.

For control with respect to the minus (–) output-sensing terminal, see Model NTC–200. For isolated digital control see the type SN digital programmers in the *Programming Accessories* section of the Kepco Catalog.

OFFSETS: The equivalent offset voltage and current variations for the JQE's voltage channel are tabulated for the effect of changes in source, load, temperature, and time. Their effect on the output may be calculated from the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is an external feedback rheostat and R_i is the input resistor from the reference, E_r. Option "–E" offers a means of zeroing the fixed or initial part of the offset voltage E_{io} which otherwise is set somewhat negative to insure the ability to program zero.

GAIN: The open-loop d-c gain is in excess of 0.5 x 10^6 volts/volt.

REFERENCE: +6.2V d-c ±5% with respect to the plus (+) output/sense terminal, capable of supplying up to 1 milliampere.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

Data and prices subject to change without notice

CURRENT STABILIZATION

The JQE is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by a multiturn front panel control over the range 10% to 105% of the rated current. Option "–Y" provides an additional current stabilization channel using the built-in current-sensing resistor, but terminated on a separate rear barrier-strip for external control by a potentiometer or small control voltage. This voltage, with respect to the plus (+) output terminal, can be derived from a divider across the internal reference or from a separate programming source such as the Kepco type SN Digital Programmer.

For the precision control of current, the voltage control channel may be reconnected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. Using an external current feedback rheostat, the current range is 1 milliampere to 100% I_o max. Models equipped with option "–E" can be controlled from approximately 1 microampere to 100% I_o max.

The recommended ratio of current for any single current-sensing resistor is 50:1.

DYNAMICS

VOLTAGE RECOVERY FOR STEP-LOAD CURRENT:

The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 µs.

CURRENT RECOVERY FOR STEP-LOAD VOLTAGE:

As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast-recovery current stabilizers, please see the OPS Groups V, VI, VII and VIII in Kepco's Catalog.

PROGRAMMING SPEED: The rate at which JQE responds to a step program is determined by the current limit setting, the load resistance and the tabulated output capacitance. For fast programming applications, please see the OPS Groups V, VI, VII and VIII in the *High Speed* section of Kepco's Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The table gives these values for each JQE model.

GENERAL

SERIES/PARALLEL: JQE models can be operated together in series or parallel and can be interconnected for master/slave tracking. Note: Units with optional crowbar may not be used in parallel. Series operation up to rated isolation limit (500V).

ISOLATION FROM GROUND: The circuit and output terminals of JQE have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–65 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–65 Hz. Power consumption is tabulated for each model; power factor 0.9. "Quarter-rack" models are protected by a built-in fuse; all others have a combination on/off switch and circuit breaker. Units are equipped with a 3-wire line cord; the "quarter" and "half" rack units use plug Pattern No. 1, "full-rack" models use plug Pattern No. 2. (See page 111 of the Kepco Catalog.)

STANDARDS: JQE models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TEMPERATURE RATINGS

Storage: –40°C to +85°C.

Operating: –20°C to +71°C. Full output current is delivered at +71°C without derating. Cooling is by means of a built-in, sealed-bearing blower exhausting to the rear.

TERMINALS: All sensing and control connections to JQE are made via a rear-mounted barrier-strip. All units have separate rear binding posts or pressure-type output connections for the d-c output. Models rated 15 amperes and less have auxiliary front panel d-c output binding posts.

METERS: JQE power supplies are fitted with separate 2-inch recessed ±3% voltmeters and ammeters; each is equipped with a 10:1 range switch for improved readability at low output levels.

MOUNTING: Full-rack-sized models rack-mount directly with accessory flanges (also predrilled for slides, Jonathan type 110 QD 20-2, 22-2 or 24-2). The quarter-rack and half-rack-sized units are designed for rack-mount installation in type RA–24 or RA–32 drawers. Unmetered units are available in modular form. Please see the *Modular* section in the Kepco Catalog.

Model RA–24 Rack Adapter	Price: $25.00.
Model RA–32 Rack Adapter	Price: $75.00.

Metric measure:	132.6 H x 211.9 W x 441.3 D mm
Full-rack models:	
English measure:	5 7/32"H x 16½"W** x 17 1/64"D*
Metric measure:	132.6 H x 419.1 W x 466.7 D mm

*behind panel

**with "ears" standard 19" panel width.

FINISH: *Panel:* Two-tone black and light gray (Color 26440 per Fed. Std 595.)
Case: Textured dark charcoal.

OPTIONS (add identifying letters as a suffix to model number):

Suffix "–VP": The crowbar option provides a voltage triggered electronic "short" across the output terminals if the voltage exceeds the set level.

Crowbar trigger time: 5–10 microseconds with an adjustable delay capacitor to minimize the false alarm rate.

Crowbar threshold: 5% of E_o or 0.25 volt, whichever is greater. An initial setting should account for a –2% warm-up settling effect.

Crowbar temperature effect coefficient: 0.05% per °C.
Price: See table.

Suffix "–E": Zeroing trimmer for the offset voltage of the voltage channel. Price: $10.00.

Suffix "–T": Lowered temperature effect coefficient:
0.005% per °C voltage mode; 0.01% per °C current mode.
Price: $30.00.

Suffix "–Y": Remote current control. This option provides a separate control amplifier for remote control over the current limit function. Available for the ½ rack and full rack JQE models only. For remote current limit programming in a ¼ rack sized model, please see the comparable JMK models.

Price:	Quantities 1–4 units	each: $95.00.
	5 or more units	each: $50.00.

Note: Units ordered with the "–Y" option come with a built-in voltage channel zeroing control. Option "–E" is, in effect, included.

(2) 20 Hz to 10 MHz.
(3) Except 380V a-c ±10% for Model KW 6–500M.

The KW is an automatic crossover, voltage/current stabilizer featuring a linear transistor *shunt* regulator functioning with a 3-phase SCR controller for exceptional efficiency. The KW has three control channels, as illustrated, a voltage control channel, a current stabilizer, and a re-entrant overload control channel. The operating mode of the power supply, a function of the load and the setting of the two controls, is signalled by means of panel-mounted LED indicators. The KW makes extensive use of plug-in linear I-C's for exceptional stability and control precision. A built-in overvoltage crowbar is standard.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: The KW may be set or programmed over the voltage range given in the model table. For any voltage setting, KW can be operated from zero to maximum load current.

CONTROL/PROGRAMMING: Output voltage is controlled continuously through the range by a panel-mounted, 10-turn rheostat. External control can be exercised by resistance (1000 ohms per volt with a built-in calibration control) or by a control voltage. The output may be digitally controlled with an accessory Kepco type SN Digital Programmer.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connnection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. The voltage dropped in the power leads is subtracted from the voltage available to the load.

CURRENT STABILIZATION

The KW is equipped with a built-in current sensing and control channel for precision current stabilization with automatic crossover from and to the voltage stabilization mode.

OUTPUT RANGE: Current is controlled by a 10-turn, panel-mounted control over the range 10% I_o to 100% I_o max.

CONTROL/PROGRAMMING: Current may be externally controlled (programmed) by an external rheostat or an external resistance (5 k ohms is full scale current) or an external control voltage (5 volts d-c corresponds to full scale current).

RE-ENTRANT (FOLDBACK) OVERLOAD LIMITER: Output of the KW is bounded by a third control channel functioning as the maximum current boundary for compliance voltage less than the minimum value for current stabilization. Internally set.

MODE FLAG: KW uses three panel-mounted, light-emitting diodes (LED) annunciators to signal which mode of operation controls the output: the voltage stabilization channel, the current stabilizer, or the re-entrant foldback protector.

DYNAMICS

VOLTAGE RECOVERY FOR STEP-LOAD CURRENT: Because the KW consists of a linear regulator combined with SCR controller, the voltage recovery time is dependent on both the size and direction of the load current step.

For a current-on step, up to 10% I_o, or a current-off step, up to 50% I_o, voltage recovery to within the load effect band (or 2 mV, whichever is greater) is less than 50 microseconds.

For a current-on step greater than 10% I_o, or a current-off step greater than 50% I_o, voltage recovery occurs in less than 50 milliseconds. Voltage overshoot amplitude for any load current-off step is limited to 0.5 volt maximum by built-in absorber circuit.

CURRENT RECOVERY FOR STEP-LOAD VOLTAGE: A stabilized current recovers at a rate of approximately 1 second per volt of compliance change.

PROGRAMMING SPEED (voltage channel): KW models can be programmed at approximately 1 volt per second.

GENERAL

SERIES/PARALLEL: KW models can be operated together in series up to the maximum isolation-voltage. Up to 5 units can be connected in parallel. Terminals are provided for master/slave tracking and for interconnected operation of their overvoltage crowbar (necessary for parallel use).

ISOLATION FROM GROUND: The circuit and output terminals of the KW have no d-c connections to ground and may be floated up to 25 volts (d-c or peak) off ground. The common mode current from output to ground is 3 milliamperes rms, 30 milliamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENTS-Model KW 6–600M: 208V a-c ±10%, 60 Hz ±3 Hz, 3-phase, 4-wire wye. Source power consumption is approximately 20 amperes rms per phase, 5500 watts. The KW is protected by a panel-mounted, 3-phase circuit breaker interlocked with the crowbar trip circuit.

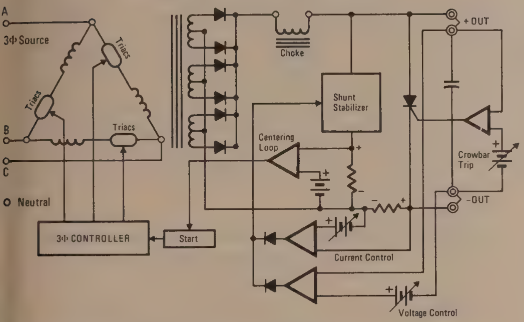
SIMPLIFIED SCHEMATIC DIAGRAM



SOURCE POWER REQUIREMENTS-Model KW 6–500M: Model KW 6–500M is designed for use in 50 Hz service areas. Power requirements: 380V a-c ±10%, 50 Hz ±3 Hz, 3-phase, 4-wire wye. Source power consumption is approximately 15% smaller than for Model KW 6–600M.

TEMPERATURE RATINGS

Storage: -40°C to +71°C.

Operating: -20°C to +71°C. Full output current is delivered at +71°C without derating. Cooling is by means of built-in, sealed-bearing blowers. The intake is on the right side (viewed from the front); the exhaust is to the left. Mounting should allow for air movement (generated by the blower) of approximately 500 CFM.

STANDARDS: KW power supplies are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: The main plus and minus output connections are 1½" x 2" (40 mm x 50 mm) plated copper plates fitted with 3/8" tapped inserts for the accommodation of lugs. Wire of 500,000 circular mills is recommended for the 600 ampere unit. Separate barrier-strips are provided for the a-c source power connection, for the crowbar connection, for the remote on/off connection and for the sensing and control connections.

METERS: The KW power supplies are fitted with separate 2-inch recessed ±3% voltage and current meters. Test points are provided on the panel for the connection of external measuring apparatus. The voltage monitor terminals are connected to the error-sensing point. The current monitor terminals are connected across the KW's current-sensing resistor.

MOUNTING: KW power supplies can be rack-mounted in standard 19" equipment cabinets occupying 8 3/4" of panel height. The power supply's 200 lb. (91 kg) weight requires a rear support bracket in contact with the frame. The Kepco Model FSB Filler Support Brackets are suitable.

DIMENSIONS

English measure: 8 23⁄32"H x 19"W x 19 29⁄32"D (behind panel).

Metric measure: 221.5 H x 482.6 W x 505.6 mm (behind panel).

FINISH: *Panel:* Light gray Color No. 26440 per Fed. Std. 595.

OVERVOLTAGE CROWBAR/ABSORBER

A voltage-triggered crowbar/absorber is included as standard equipment on KW models. The setting adjustment and indicator are located on the front panel together with a push button that disables the absorber so that the voltage setting may be made without upsetting the output. The crowbar/absorber circuit is in two parts.

- A self-resetting absorber circuit that clamps the output at a selected level above the output setting.
- A back-up shorting crowbar that shorts the output (and turns off the circuit breaker) should the absorber circuit be unable to contain the energy of an overvoltage.

For transients, such as load-off steps greater than 50% I_O max, the absorber will clamp the maximum output amplitude to the set value–to within 0.5 volt of the output voltage setting. More durable overvoltage stresses activate the SCR crowbar and circuit breaker and require manual reset.

A feature of the KW's crowbar is the provision for remote tripping. A "trigger" terminal is provided on the rear which can be wired to as many as five other KW units in a parallel "wired-or" configuration. Any one of these crowbars tripping, simultaneously activates all of the crowbars in the system.

Crowbar/absorber setting range: 4 volts (min) to 100% E_O max. plus 0.5 volt.

Crowbar/absorber temperature effect coefficient: 0.05% per °C.

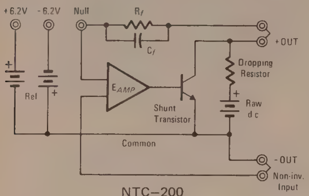
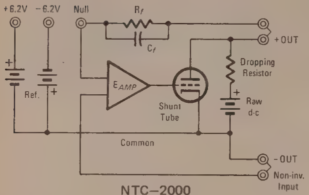
NTC
PROGRAMMING INTERFACE

SIMPLIFIED SCHEMATIC DIAGRAMS



NTC–200



NTC–2000

The Kepco NTC is an interface between active programming signal and operationally programmable power supply, to allow for control with the power supply's *negative* output terminal common, or grounded. The NTC is, itself, a *shunt* stabilized operational inverting amplifier which boosts a programming signal to the desired *voltage* level, where it may be connected to the feedback terminals of a power supply for noninverting repeater operation.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: NTC are full range, operationally programmable power supplies, principally intended for use as a programming interface. They can be programmed to any level within their rated range, and be fully loaded at any output setting.

GAIN: The open loop d-c gain is >0.5 x 10^6 volts per volt.

FEEDBACK: NTC are provided with a built-in fixed feedback resistor (200 KΩ Model NTC–200, 2 megohms Model NTC–2000) providing feedback from the positive output terminal so that NTC serves as a wide-band, inverting d-c amplifier. It is a unipolar device, producing a positive (+) output for a negative (-) input with respect to the (-) output terminal, which is common. The output of NTC may drive a load directly (if current is sufficient to the purpose). More frequently, it drives the feedback terminals of a companion operational power supply as illustrated in Figure A. The companion operational amplifier serves as a voltage repeater, producing identical voltage at rated current.

OFFSETS: The equivalent offset voltage and current variations for NTC are tabulated for the effect of changes in source, load, temperature and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm\Delta E_r (R_f/R_i) \pm\Delta E_{io} (1 + R_f/R_i) \pm\Delta I_{io} (R_f),$$

where R_f is the built-in feedback resistance, and R_i is the external coupling resistance from the signal source or reference, E_r.

OFFSET NULLING: The initial or bias part of the voltage and current offsets can be nulled (zeroed) by built-in trimmers, accessible through the panel.

REFERENCES: A pair of ±6.2V ±5%, 1 milliampere references are provided for offsetting or biasing purposes.

CURRENT LIMITING: Output current is limited at approximately 110% of rated current into a short circuit. Recovery is automatic when overload is removed.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): See table.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the built-in feedback resistance and capacitance, (200 KΩ and 350 pF in Model NTC–200; 2 megohms and 100 pF in Model NTC–2000).

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression:

$$f_{max.} = \frac{\text{Slewing Rate}}{\pi E_{pp}}$$

where E_{pp} is the peak-to-peak modulation voltage. The -3 dB respons is given by the programming time constant.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage amplifier, the impedance increase above the amplifier's cutoff frequency becomes asymptotic to a characteristic series inductance. The table gives these values for each NTC.

Figure A: NTC–2000, used to drive a Model BHK 2000–0.1M.

LOAD REACTANCE: NTC, like all high speed operational power supplies, are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff (lag) networks will allow the NTC to drive most cable or harness capacitances up to this limit. Note: When driving the feedback terminals of a conventionally filtered operational power supply, a significant capacitance will usually be

encountered. The NTC may either be slowed (by external feedback capacitance of its own) or may be isolated, by using a suitable resistance (R_c in Figure A), between the NTC output and its load.

GENERAL

SOURCE POWER REQUIREMENT: Units are factory wired for 105–125V a-c, 50–65 Hz, single phase. A simple jumper change will reconfigure the input for 210–250V a-c, 50–65 Hz. Power consumption: Approximately 35W; power factor 0.9; internally fused.

ISOLATION FROM GROUND: The circuit and output terminals of NTC have no d-c connection to ground, and may be floated: Up to 500 Volts for Model NTC–200, up to 1000 Volts for Model NTC–2000, (d-c or peak) off ground. The common mode current from output to ground is: For Model NTC–200, 5 μA rms, 50 μA p-p; for Model NTC–2000, 30 μA rms, 300 μA p-p at 60 Hz.

TEMPERATURE RATINGS:

Storage: -40°C to +85°C.
Operating: -20°C to +65°C.

Cooling is by natural convection. No derating or external heat sink is required.

STANDARDS: NTC Models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: Model NTC–200 features an 8-terminal front panel patch board, superimposed over a schematic representation of the NTC. These terminals access signal input and feedback connections. For Systems use, the connections are duplicated on a barrier-strip located at the rear. Model NTC–2000, for safety, has the rear barrier-strip connections only. Source power is connected via a 3-wire safety-grounded line cord, terminated in plug Pattern No. 1

DIMENSIONS:

MOUNTING: Units may be rack-mounted with Adapter RA–24.

KEPCO OPERATIONAL POWER SUPPLIES

OPS group I

Kepco operational power supplies are a unique concept in power instrumentation. They are d-c power supplies, fully able to stabilize a voltage or current against the effects of load, source or temperature changes, yet able to respond with agility to programming signals requiring swift changes in the output.

The OPS–I are modular devices with a single uncommitted control channel using an integrated circuit front end for low drift and good temperature immunity.

MODEL	d-c OUTPUT RANGE		OUTPUT IMPEDANCE		SLEWING RATE	PRICE (2)	SHIP WGT.	
	VOLTS	AMPS	VOLTAGE MODE dc OHMS + SERIES L	CURRENT MODE (1) d-c OHMS + SHUNT C	VOLTS/µ Sec.		lbs.	kg.

(3) ΔE_{io} for load in current stabilization mode is ΔE_o/open-loop gain. ΔE_o is the compliance voltage change.
(4) Whichever is greater.
(5) One terminal must be grounded or connected so that common-mode current does not flow through the load or through a current-sensing resistor.
(6) 20 Hz to 10 MHz.

NOTE: OPS Models are *not* general purpose power supplies.

UNCOMMITTED CONTROL CHANNEL

OUTPUT RANGE: OPS–I are full-range, operationally programmable power supplies. They can be programmed to any level within their rated range and be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 0.5×10^6 volts/volt.

FEEDBACK: Provision is made for feedback from the negative (–) output/sense terminal so that OPS–I will function as a wide-band, inverting d-c amplifier. It is a unipolar device, producing a negative (–) output for a positive (+) input with respect to the plus (+) output/sense terminal which is common. Output voltage may be programmed by a selection of input and feedback resistances (R_i and R_f) functioning with the built-in reference (E_r) according to the relationship $E_o = E_r\,(R_f/R_i)$. OPS–I operational power amplifiers can be used to stabilize various physical phenomena—heat, speed, force, electrochemical action . . . that is, to whatever the feedback is made proportional.

OFFSETS: The equivalent offset voltage and current variations for OPS–I are tabulated for the effect of source changes, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm\ \Delta E_r\,(R_f/R_i)\ \pm\ \Delta E_{io}\,(1 + R_f/R_i)\ \pm\ \Delta I_{io}\,(R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the uncommitted channel's voltage offset (E_{io}) and current offset (I_{io}) can be nulled (zeroed) by built-in trimmers.

REFERENCES: A pair of ±6.2V ±5%, 1 milliampere references referred to the plus (+) output/sense terminal are provided for offsetting or biasing purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The OPS–I is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by an internal trimmer over the range 10% to 105% I_o max. For the precision control of current, the uncommitted control channel may be connected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. Using an external current feedback rheostat, current can be controlled from approximately 1 microampere to 100% I_o max. Note: The range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio. For a similar power supply module in which the main control channel is committed to current stabilization, please see the CCP modules in the Kepco Catalog.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): See table.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 400 pF to 1000 pF (except 800 pF to 1600 pF for Model OPS 7–2B).

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: $f\,\text{max.} = \text{slewing rate}/\pi E_{pp}$, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS–I model.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit. To drive larger capacitances, external voltage feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's PCX Design Group. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption: approximately 50W; 0.9 power factor; internally fused.

ISOLATION FROM GROUND: The circuit and output terminals of OPS–I have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: OPS–I models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: Source power, d-c output, sense and control connections are duplicated on a printed circuit edge connector and a barrier-strip. The connector mates with Kepco PC–1 and PC–8.

MOUNTING: Mount an uncased OPS–I module in a protected area using 6-32 hardware to tapped holes in the heat sink or 8-18 thread cutting screws to the nylon standoffs provided. The uncased module can be mounted on a BPA–22 slide adapter for plug-in mounting in the RA22–6A or RA–32 enclosure. Mount the cased model (see option "–C") by means of 6-32 hardware to any of three surfaces. The cased model can be rack-mounted into 19-inch equipment racks.

Model RA 12–1 mounts a single cased model.
Model RA 13–4 mounts up to four cased models.
Model RA 11–6 mounts up to six cased models.
Rack adapters are $15.00 each.

DIMENSIONS

	p-p (6)	<0.05% of E_o — or 10 mV (4)		–

(3) ΔE_{io} for load in current stabilization mode is ΔE_o/open-loop gain. ΔE_o is the compliance voltage change.
(4) Whichever is greater.
(5) One terminal must be grounded or connected so that common-mode current does not flow through the load or through a current-sensing resistor.
(6) 20 Hz to 10 MHz.

Kepco operational power supplies are a unique concept in power instrumentation. They are d-c power supplies, fully able to stabilize a voltage or current against the effects of load, source or temperature changes, yet able to respond with agility to programming signals requiring swift changes in the output.

The OPS–II are similar to the OPS–I modules, except that they are mounted on a slide adapter to fit various plug-in housings and are equipped with a patchboard panel.

NOTE: OPS Models are *not* general purpose power supplies.

UNCOMMITTED CONTROL CHANNEL

OUTPUT RANGE: OPS–II are full-range, operationally programmable power supplies. They can be programmed to any level within their rated range and be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 0.5 x 10^6 volts/volt.

FEEDBACK: Provision is made for feedback from the negative (–) output/sense terminal so that OPS–II will function as a wide-band, inverting d-c amplifier. It is a unipolar device, producing a negative (–) output for a positive (+) input with respect to the plus (+) output/sense terminal which is common. Output voltage may be programmed by a selection of input and feedback resistances (R_i and R_f) functioning with the built-in reference (E_r) according to the relationship $E_o = E_r\ (R_f/R_i)$. OPS–II operational power amplifiers can be used to stabilize various physical phenomena–heat, speed, force, electrochemical action . . . that is, to whatever the feedback is made proportional.

OFFSETS: The equivalent offset voltage and current variations for OPS–II are tabulated for the effect of changes in source, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm\ \Delta E_r\,(R_f/R_i)\ \pm\ \Delta E_{io}\,(1 + R_f/R_i)\ \pm\ \Delta I_{io}\,(R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the uncommitted channel's voltage offset (E_{io}) and current offset (I_{io}) can be nulled (zeroed) by built-in trimmers accessible through the panel.

REFERENCES: A pair of ±6.2V ±5%, 1 milliampere references referred to the plus (+) output/sense terminal are provided for offsetting or biasing purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The OPS–II is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by an internal trimmer over the range 10% to 105% I_o max. For the precision control of current, the uncommitted control channel may be connected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. Using an external current feedback rheostat, current can be controlled from approximately 1 microampere to 100% I_o max. Note: The range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio. For a similar power supply module in which the main control channel is committed to current stabilization, please see the CC units in the Kepco Catalog.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): See table.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 800 pF to 1800 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: f max. = slewing rate/πE_{pp}, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

REAR VIEW

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS–II model.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit. To drive larger capacitances, external voltage feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's PCX–MAT Design Group. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250 a-c, 50–440 Hz. Power consumption: approximately 50W; 0.9 power factor; internally fused.

ISOLATION FROM GROUND: The circuit and output terminals of OPS–II have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: OPS–II models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: Source power, d-c output, sense and control connections are made through a rear PC plug that mates with the connector in a selected housing. The amplifier summing junction (null terminal), output and sense terminals, and both references are brought to a front panel patch board for easy access for input, output and feedback connections.

MOUNTING: The OPS–II plug-in operational power supplies can be manifolded up to six abreast in the RA 22–6A housing or intermixed in the RA–32 housing. The type CA–3, CA–4, and CA–5 bench-top cases accommodate 1, 2 or 3 units, respectively, with the mating plugs terminated in convenient barrier strips for cable access.

Model RA 22–6A Rack Adapter	Price: $99.00.
Model RA–32 Rack Adapter	Price: $75.00.
Model CA–3 Case	Price: $25.00.
Model CA–4 Case	Price: $35.00.
Model CA–5 Case	Price: $45.00.
Model CA–7 Case	Price: $35.00.
Model CA–8 Case	Price: $45.00.

(5) 20 Hz to 10 MHz.

UNCOMMITTED CONTROL CHANNEL

OUTPUT RANGE: OPS–III are full range, operationally programmable power supplies. They can be programmed to any level within their rated range and be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 10^6 volts per volt.

FEEDBACK: Provision is made for feedback from the negative (–) output/sense terminal so that OPS–III will function as a wideband, inverting d-c amplifier. It is a unipolar device, producing a negative (–) output for a positive (+) input with respect to the plus (+) output/sense terminal, which is common. Output voltage may be programmed by a selection of input and feedback resistances (R_i and R_f) functioning with the built-in reference (E_r) according to the relationship $E_o = E_r (R_f/R_i)$. OPS–III operational power amplifiers can be used to stabilize various physical phenomena–heat, speed, force, electrochemical action . . . that is, to whatever the feedback is made proportional.

OFFSETS: The equivalent offset voltage and current variations for OPS–III are tabulated for the effect of changes in source, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the uncommitted channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer.

REFERENCES: A pair of ±6.2V ±5%, 1 milliampere references referred to the plus (+) output/sense terminal are provided for offsetting or biasing purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT CONTROL CHANNEL

OPS–III will stabilize current by means of an independent, committed control channel which functions with feedback from a built-in current-sensing resistor.

OUTPUT RANGE: Current is controlled by an internal (screwdriver-adjusted) trimmer with a range of 2% I_o max to 100% I_o max. For a wider current control range, the uncommitted control channel may be connected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. An external feedback rheostat will control current from approximately 1 microampere to 100% I_o max. Note: the range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio.

CONTROL/PROGRAMMING: The current control channel itself may be externally programmed by a 0–0.5 volt control voltage or by an external potentiometer.

MODE FLAG: OPS–III produces a "flag" signal which indicates which channel controls the output. The flag is +5 volts (1 mA max) with respect to the plus (+) sense terminal when the current channel has control. The flag is approximately zero volts when the uncommitted channel has control.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): More than 1V per μsec.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 800 pF to 1800 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: f max. = $10^6/\pi E_{pp}$,, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTLINE DIMENSIONAL DRAWINGS

Fractional dimensions in light face type are in inches, dimensions in bold face type are in millimeters.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS–III model.

LOAD REACTANCE: Operational power supplies should be restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit without loss of speed. To drive larger capacitances, external voltage-feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's PTR Design Group. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER INPUT: Units are factory wired for 105–125V a-c, 50–440 Hz. A switch reconfigures the input for 210–250V a-c. Power must be hard-wired to the provided terminals. Internally fused. Source current: 1.2 amperes at 125V a-c. Power factor 0.9.

ISOLATION FROM GROUND: The OPS–III circuit is isolated from its case and ground. It may be placed in series with 500 volts d-c (or peak) off ground. Common mode current, output to ground is less than 5 µA rms, 50 µA peak-to-peak at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: OPS–III models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS AND ADJUSTMENTS: All input, output, control and sensing connections are made via a pair of barrier-strips located on one of the small surfaces. The built-in zeroing, lag adjustments and current control are located on the same surface and are accessible for screwdriver adjustment without removing the cover.

MOUNTING: OPS–III modules will mount on any of its three surfaces using 8-32 hardware to recessed threaded inserts.

19-inch rack mounting accessories include:
RA 35–1 mounts a single unit on a 3½" high panel.
Model RA 33–3 mounts up to 3 units on a 3½" high panel.
Model RA 34–4 mounts up to 4 units on a 5¼" high panel.
Rack adapters are $15.00 each.

DIMENSIONS

English measure:

3¹⁷⁄₆₄" H x 5" W x 13²⁷⁄₃₂" L (including barrier-strip).

Metric measure:

83.0 H x 127.0 W x 351.6 L mm (including barrier-strip).

See outline drawings.

FINISH: Black anodized aluminum.

[5] 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: OPS IV and V are full range, operationally programmable power supplies. They can be set or programmed to any level within their rated range and can be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 10^6 volts per volt.

CONTROL/PROGRAMMING: A built-in feedback rheostat senses the voltage at the negative (–) output/sense terminal. OPS models Groups IV and V have a fixed 1.0 milliampere d-c control current connected to their input summing terminal. This current passes through the feedback rheostat so that output control is exercised at 1000 ohms per volt. Both the feedback rheostat and the input 1 milliampere d-c control current can be disconnected (by removing the jumpers on the mating plug) so that an external d-c control signal can be applied as if to an inverting amplifier and/or the feedback can be taken from another point to stabilize various physical phenomena (heat, speed, force, electrochemical action. . .).

OFFSETS: The equivalent offset voltage and current variations for OPS IV and V are tabulated for the effect of changes in source, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference E_r.

VOLTAGE/CURRENT STABILIZATION: Refer to the specifications for JMK in the *General Purpose* section in the Kepco Catalog.

OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer accessible at the rear.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT CONTROL CHANNEL

OPS Groups IV and V will stabilize current by means of an independent control channel which functions with feedback from a built-in current sensing resistor.

OUTPUT RANGE: Current is controlled by a panel-mounted 10-turn precision potentiometer with a range of 2% I_o max to 100% I_o max.

For a wider current control range, the voltage control channel may be connected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. An external feedback rheostat will control current from approximately 1 microampere to 100% I_o max. Note: The range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio.

CONTROL/PROGRAMMING: A separate channel is provided for external current programming. This channel uses the built-in current-sensing resistor, but is externally controlled by either a voltage or a remote potentiometer. The front panel current control serves as an overriding backup current limit.

MODE FLAG (a d-c signal referred to plus (+) sense):

Voltage mode: ⩾5V d-c; source impedance: 5 k ohms.

Current mode: ⩽0V d-c.

A pair of panel lamps indicate whether the voltage channel or the internally-sensed current channels have control of the output.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): More than 1 volt per microsecond.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 800 pF to 1600 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: f max. = $10^6/\pi E_{pp}$, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB point on the frequency response curve is given by the programming time constant.

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:
Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:
The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS Group IV and V model.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit without loss of speed. To drive larger capacitances, external voltage-feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's JMK Design Group. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER INPUT: Units are factory-wired for 105–125V a-c. A switch enables changeover to 210–250V a-c, 50–65 Hz, protected by a resettable circuit breaker. A 3-wire line cord is provided.

ISOLATION FROM GROUND: The circuit of OPS models in Groups IV and V is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. Common mode current from output to ground less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Full output current is delivered at +71°C without derating. Cooling is aided by a built-in, sealed-bearing blower, exhausting to the rear.

STANDARDS: The OPS Groups IV and V models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS AND CONNECTIONS: All sensing and control connections to OPS models, Groups IV and V are made via a rear-mounted plug connector. A mating connector is supplied, wired with jumpers for local control and sensing. D-C output connections are made via rear-mounted "5-way" binding posts. The mating connector is Kepco Model PC–4. Extra PC–4 connectors are $10.00 each.

METERS: Two dual-range, 2-inch, ±3% recessed meters monitor the (average) output voltage and current. Panel switches provide a 10:1 range of sensitivity.

MOUNTING: OPS IV and V are "quarter-rack" sized and mount up to four abreast in the Kepco RA–24 rack mounting drawer. Up to two OPS IV or V models can be mounted side-by-side in Kepco rack mounting drawer RA–32, with space for up to three "one-sixth rack" plug-in power supplies.

Model RA–24 Rack Adapter	Price: $25.00.
Model RA–32 Rack Adapter	Price: $75.00.

RA–24 and RA–32 are predrilled for Jonathan slides, type 110 QD 20-2, 22-2, 24-2.

(1) Current mode using an external current sensing and feedback circuit. Impedance data based on a 1-volt sample.

A high-gain, single-channel, wide-band power supply which can be configured for a variety of signal processing chores, OPS Groups VI and VII are "half-rack" sized, OPS Group VIII is a full (19") rack width for systems or bench use. They are equipped with meters and a 10-turn voltage control. The I-C front end in the control channel contributes very low offsets for accurate tracking of control signals. The low shunt capacitance output allows for rapid voltage programming or fast current-stabilized load recovery.

NOTE: OPS Models are *not* general purpose power supplies.

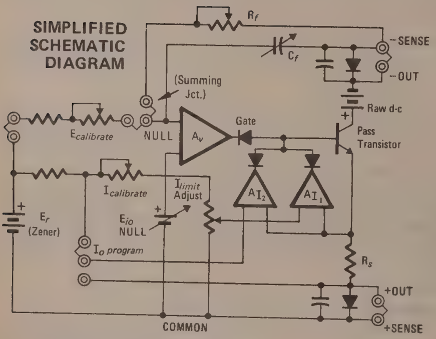
SIMPLIFIED SCHEMATIC DIAGRAM



VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: OPS VI, VII, and VIII are full range, operationally programmable power supplies. They can be set or programmed to any level within their rated range and can be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 0.5 x 10^6 volt/volt.

CONTROL/PROGRAMMING: A built-in feedback rheostat senses the voltage at the negative (–) output/sense terminal. OPS Groups VI, VII and VIII models have a fixed 1.0 milliampere d-c control current connected to their input summing terminal. This current

Data and prices subject to change without notice

passes through the feedback rheostat so that output control is exercised at 1000 ohms per volt. Both the feedback rheostat and the input 1 milliampere d-c control current can be disconnected (by removing jumpers on the rear barrier-strip) so that an external d-c control signal can be applied as if to an inverting amplifier and/or the feedback can be taken from another point to stabilize various physical phenomena, heat, speed, force, electrochemical action. . . .

OFFSETS: The equivalent offset voltage and current variations for OPS Groups VI, VII, and VIII are tabulated for the effect of changes in source, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the feedback rheostat and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer.

VOLTAGE/CURRENT STABILIZATION: Refer to the specifications for JQE in the Kepco catalog.

REFERENCE: +6.2V d-c ±5% with respect to the plus (+) error-sense terminal, capable of supplying up to 1 milliampere.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT CONTROL CHANNEL

The output current of OPS Groups VI, VII and VIII is *limited* by a built-in current sensing and feedback arrangement. This channel offers approximately 2% current stabilization as a maximum current limiter.

CONTROL/PROGRAMMING: A separate channel is provided for external current programming. This channel uses the built-in current-sensing resistor, but is externally controlled by either a voltage or a remote potentiometer. The front panel current control serves as an overriding backup current limit. For the precision control of current, the voltage control channel may be connected so as to sample the drop across an external current-sensing resistor in the plus (+) output lead. An external rheostat will control current from approximately 1 microampere to 100% I_o max. Note: The range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): More than 100V per millisecond for models rated less than 20 amperes; more than 50V per millisecond for models rated 20 amperes and greater.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally are: 2500 pF to 3500 pF, except the 6V and 15V models are shunted by approximately 5000 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: f max. = slewing rate/πE_{pp}, where E_{pp} is the peak-to-peak modulation voltage. The −3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS VI, VII, and VIII model.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit without loss of speed. To drive larger capacitances, external voltage feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's JQE Design Group. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER INPUT: Units are factory wired for 105–125V a-c, 50–65 Hz. A simple jumper change reconfigures the input for 210–250V a-c. The input is protected with a resettable circuit breaker. A 3-wire line cord is provided. OPS Groups VI and VII are terminated in plug Pattern No. 1 and OPS Group VIII is terminated in plug Pattern No. 2. (See page 111 of the Kepco Catalog.)

ISOLATION FROM GROUND: The circuit of OPS models in Groups VI, VII and VIII is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. Common-mode current from output to ground is less than 5 microamperes rms, 50 microamperes p-p at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +71°C. Full output current is delivered at +71°C without derating. Cooling is aided by a built-in, sealed-bearing blower, exhausting to the rear.

STANDARDS: OPS VI, VII and VIII models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS AND CONNECTIONS: All sensing and control connections to OPS Groups VI, VII and VIII models are at the rear. The d-c output connections are binding posts, the reference, feedback and signal input terminations are on a barrier-strip. Models with output current of 15 amperes or less, have front panel output binding posts.

METERS: Two dual range, 2-inch, ±3% recessed meters monitor the (average) output voltage and current. Panel switches provide a 10:1 range of sensitivity.

MOUNTING: OPS VI and VII models are "half-rack" sized and mount up to two abreast in the Kepco RA–24 rack mounting drawer. A single "half-rack" model can be combined with up to three one-sixth width models in the RA–32 drawer.

Model RA–24 Rack Adapter	Price: $25.00.
Model RA–32 Rack Adapter	Price: $75.00.

RA–24 and RA–32 are predrilled for Jonathan slides, type 110 QD 20-2, 22-2 or 24-2.

OPS Group VIII models are "full-rack" sized and have accessory flanges for direct installation in standard 19-inch racks. They are predrilled for slides, Jonathan type 110 QD 21-1, 22-1, 24-1.

(3) Whichever is greater.
(4) One terminal must be grounded or connected so that common-mode current does not flow through the load or through a current-sensing resistor.
(5) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: OPS–IXB are full-range, operationally programmable power supplies. They can be programmed to any level within their rated range and be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 10^6 volts per volt.

CONTROL/PROGRAMMING: A built-in fixed feedback resistor (0.5 MΩ: OPS 500B, 1 MΩ: OPS 1000B, 2 MΩ: OPS 2000B) senses the voltage at the negative (–) output/sense terminal. A 0–1 mA control current connected to the input summing terminal programs the d-c output throughout the rated range. This current, with respect to the plus (+) sense terminal, which is common, may be externally generated–as from a function generator–or may be derived from a built-in "free amplifier." The built-in free amplifier, together with the built-in 6.2V reference, allow for low-level, passive-element control over the OPS–IXB output. A simple rheostat supporting 0–5 volts will control the high voltage output linearly through its entire range. The internal feedback resistance can be easily disconnected so that feedback can be taken from another point to stabilize various physical phenomena (heat, speed, force, current, electrochemical action . . . etc.).

OFFSETS: The equivalent offset voltage and current variations for OPS–IXB are tabulated for the effect of source changes, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm\ \Delta E_r\,(R_f/R_i)\ \pm\ \Delta E_{io}\,(1 + R_f/R_i)\ \pm\ \Delta I_{io}\,(R_f)$$

where R_f is the feedback resistor and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) and offset current (I_{io}) can be nulled (zeroed) by a built-in trimmer.

REFERENCE: A pair of ±6.2V ±5% 1 milliampere references referred to the plus (+) output/sense terminal are provided for offsetting or biasing purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT CONTROL CHANNEL

Output current is controlled by a built-in current sensing and feedback circuit compensated to account for the shunting effect of the voltage feedback circuit. The stabilization of this channel against the four major influences is tabulated.

OUTPUT RANGE: Current is controlled by a recessed trimmer accessible through the front panel. The range of this control is 2% I_o max to 100% I_o max. For a wider current control range, the voltage control channel may be connected so as to sample the drop across an external current-sensing resistor to obtain current feedback. Based on a 10-volt sample, control can be exercised from approximately 1 microampere to the maximum output current.

CONTROL/PROGRAMMING: The current control channel may be controlled externally by an analog voltage (0–1 volt for full scale current) or by means of a potentiometer divider across the internal reference. Control of the current is referred to the positive (+) output terminal.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): More than 1V per μsec.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 400 pF to 3900 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: f max. = $10^6/\pi E_{pp}$, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS–IXB model.

LOAD REACTANCE: Operational power supplies should be restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER INPUT: Units are factory-wired for 105–125V a-c, 60 Hz source power. Internal jumpers will reconfigure the input for 210–250V a-c. Power consumption is approximately 75 watts. Power factor 0.9. Protected by a built-in fuse. A 3-wire line cord is provided.

ISOLATION FROM GROUND: The circuit is isolated from its case and ground. It may be placed in series with up to 1000 volts d-c (or peak) off ground. Common-mode current from output to ground is less than 30 microamperes rms, 300 microamperes peak-to-peak at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +65°C. Cooling is by natural convection. Full output current is delivered at +65°C; no derating or external heat sink is required.

STANDARDS: OPS–IXB models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: D-C output, signal input, and feedback connections are made on a 12-terminal patch board on the front panel, which is superimposed over a schematic representation of the OPS–IXB circuit. For systems use, the connections are duplicated through two barrier-strips located at the rear

MOUNTING: OPS–Group IXB models are "half-rack" sized for bench top use or rack mounting in either the RA–24 or RA–32 Hardware Systems. Please refer to the *Hardware* section of the Kepco Catalog for descriptions. Note: Transparent plastic shields are provided for front panel binding posts and rear barrier-strips.

Kepco operational power supplies are a unique concept in power instrumentation. They are d-c power supplies, fully able to stabilize a voltage or current against the effects of load, source or temperature changes, yet able to respond with agility to programming signals requiring swift changes in the output.

OPS–X is a bench/system rack-type high voltage instrument, featuring a low drift integrated front end, transistor drivers and vacuum tube high voltage stage. The OPS–X features a "free-amplifier," which allows its output to be controlled by a small signal passive control.

NOTE: OPS Models are *not* general purpose power supplies.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: OPS–X are full-range, operationally programmable power supplies. They can be programmed to any level within their rated range and be fully loaded at any output setting.

GAIN: The open-loop d-c gain is in excess of 10^6 volts per volt.

CONTROL/PROGRAMMING: A built-in fixed feedback resistor (3.5 megohms for OPS 3500; 5 megohms for OPS 5000) senses the voltage at the negative (–) output/sense terminal. A 0–1 milliampere control current connected to the input summing terminal programs the d-c output throughout the rated range. This current, with respect to the plus (+) sense terminal, which is common, may be externally generated—as from a function generator—or may be derived from a built-in uncommitted op-amp. The built-in uncommitted amplifier, together with the built-in 6.2V reference, allow for low-level, passive-element control over the OPS–X output. A simple rheostat supporting 0–5 volts will control the high voltage output linearly through its entire range. The internal feedback resistance can be easily disconnected so that feedback can be taken from another point to stabilize various physical phenomena (heat, speed, force, current, electrochemical action . . . etc.).

OFFSETS: The equivalent offset voltage and current variations for OPS–X are tabulated for the effect of source changes, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the feedback resistor and R_i is the input resistor from the reference, E_r.

OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) and offset current (I_{io}) can be nulled (zeroed) by a built-in trimmer.

REFERENCE: A pair of ±6.2V ±5%, 1 milliampere references referred to the plus (+) output/sense terminal are provided for offsetting or biasing purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT CONTROL CHANNEL

Output current is controlled by a built-in current sensing and feedback circuit compensated to account for the shunting effect of the voltage feedback circuit. The stabilization of this channel against the four major influences is tabulated.

OUTPUT RANGE: Current is controlled by a recessed trimmer accessible from the rear through an interlocked door. The range of this control is 2% I_o max to 100% I_o max. For a wider current control range, the voltage control channel may be connected so as to sample the drop across an external current-sensing resistor to obtain current feedback. Based on a 10-volt sample, control can be exercised from approximately 1 microampere to the maximum output current.

CONTROL/PROGRAMMING: The current control channel may be controlled externally by an analog voltage (0–1 volt for full scale current) or by means of a potentiometer divider across the internal reference. Control of the current is referred to the positive (+) output terminal.

DYNAMICS

MAXIMUM SLEWING RATE (the fastest rate of change that can be obtained by overdriving or forcing): More than 3V per μsec.

PROGRAMMING TIME CONSTANT: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is: 200 pF to 1900 pF.

FREQUENCY RESPONSE: The maximum modulation frequency is given by the expression: $f \text{ max.} = 3 \times 10^6/\pi E_{pp}$, where E_{pp} is the peak-to-peak modulation voltage. The –3 dB response is given by the programming time constant. ($f = 1/2\pi\tau$, $\tau = R_f C_f$).

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: Voltage recovers as an exponential with a time constant less than 100 microseconds.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: The current recovery time constant is the same as the programming time constant or the ratio of current setting to the tabulated output capacitance, whichever is longer.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each OPS–X model.

LOAD REACTANCE: Operational power supplies should be restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit. When driving inductive loads, diode protection is required for the back emf generated by a programmed di/dt.

GENERAL

SOURCE POWER INPUT: Units are factory-wired for 105–125V a-c, 60 Hz source power. An internal switch will reconfigure the input for 210–250V a-c. Model OPS 5000, which uses a resonant power transformer, will function on 60 Hz ±3 Hz only. A special model is required for use in a 50 hertz service area. To order, append the suffix "–50" to the model number for a 210–250V a-c, 50 Hz ±3 Hz source input, and add $25.00 to the unit price. Power consumption is approximately 125 watts. Power factor 0.9. Protected by a built-in fuse. A 3-wire line cord is provided. terminated in plug Pattern No. 1. (See page 111 of the Kepco Catalog.)

ISOLATION FROM GROUND: The circuit is isolated from its case and ground. It may be placed in series with up to 1000 volts d-c (or peak) off ground. Common-mode current from output to ground is less than 50 microamperes rms, 500 microamperes peak-to-peak at 115V a-c, 60 Hz.

TEMPERATURE RATINGS

Storage: –40°C to +85°C.

Operating: –20°C to +65°C. Cooling is by natural convection. Full output current is delivered at +65°C; no derating or external heat sink is required.

STANDARDS: OPS–X models are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: D-C output, signal input, and feedback connections are made through two recessed, interlocked barrier-strips located at the rear.

MOUNTING: OPS Group X models are "full-rack" sized. Detachable rack mounting "ears" are provided for mounting in standard 19-inch equipment racks. The sides are drilled for equipment slides Jonathan type 110 QD 20-2, 22-2 or 24-2.

DIMENSIONS

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: PAT are full-range, operationally programmable power modules. They can be programmed to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Voltage may be operationally controlled using the built-in stable reference and summing resistance together with an external voltage feedback rheostat. The ratio of reference voltage to input resistance gives a control current of approximately 1 milliampere through the external voltage feedback rheostat, for a control ratio of approximately 1000 ohms per volt. An external trimmer can be used to calibrate this value. Option "–R" provides for a built-in calibrating trimmer. External signals can be substituted for or summed with the internal reference for additional control. The feedback can be derived from other sensors to stabilize current or such physical phenomenon as heat, speed, force or electrochemical action.

Operationally, PAT is a 3-terminal, unipolar, inverting, d-c amplifier in which the plus (+) output/sensing terminal serves as common between the output and an external programming signal.

For control with respect to the minus (–) output-sensing terminal, see Model NTC–200. For isolated digital control, see the type SN digital programmers in the *Programming Accessories* section of the Kepco Catalog.

OFFSETS: The equivalent offset voltage and current variations for PAT are tabulated for the effect of source changes, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the external feedback rheostat and R_i is the input resistor from the reference, E_r. Option "–E" offers a means of zeroing the fixed or initial part of the offset voltage, E_{io}, which otherwise is set somewhat negative to insure the ability to program zero.

GAIN: The open-loop d-c gain is in excess of 500,000 volts/volt.

REFERENCE: +6.2V d-c ±5% with respect to the plus (+) error-sense terminal, capable of supplying up to 1 milliampere.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The PAT is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by an internal trimmer over the range 10% to 105% I_o max. Terminals are provided on the barrier-strip of PAT for external control of the current limit function using either a 3-terminal potentiometer or a 0–1 volt control voltage. For the precision control of current, the main control channel may be connected so as to sample the drop across an external current sensing resistor in the plus (+) output lead. An external current feedback rheostat, will control current from 1 milliampere to 100% I_o max. Models equipped with option "–E" can be controlled from approximately 1 microampere to 100% I_o max. Note: The range of currents controlled by any single current-sensing resistor should be limited to a 50:1 ratio. For a similar power supply module, in which the main control channel is committed to current stabilization, please see the CCP models in the Kepco Catalog

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 μs.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the CCP group in the Kepco Catalog.

PROGRAMMING SPEED: The rate at which PAT responds to a step-program is determined by the current limit setting, the load resistance and the tabulated output capacitance. For fast programming applications, please see OPS Group I in the *High Speed* section of the Kepco Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The table gives these values for each PAT model.

---

[1] External current sensing, using the *voltage* amplifier. Effects are measured for a 1-volt current sensing voltage drop.

[2] Whichever is greater.

[3] Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.01% per °C externally sensed current mode. See option "–T."

[4] One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.

SIDE VIEW

GENERAL

SERIES/PARALLEL: PAT modules may be connected together in series, up to the limit of the isolation voltage (500V) or in parallel. Terminals are provided for master/slave interconnection.

ISOLATION FROM GROUND: The circuit and output terminals of PAT have no d-c connection to ground, and may be floated up to 500V (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption, approximately 50W. Power factor: 0.9; internally fused.

TEMPERATURE RATINGS

Storage: –40°C to +85°C.

Operating: –20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: PAT modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: Source power, d-c output, sense and control connections are made on a multiterminal barrier-strip.

MOUNTING: The PAT modules will mount to your chassis using 6-32 hardware to recessed captive nuts.

19-inch rack mounting adapter panels include:
Model RA 26–1 mounts a single module.
Model RA 27–2 mounts two modules.
Model RA 28–4 mounts up to four modules.
Rack adapters are $15.00 each.

DIMENSIONS

English measure: 3¹¹⁄₃₂"H x 6⅜"W x 4⅞"L.
Metric measure: 84.9 H x 161.9 W x 123.8 L mm.
See outline drawings.

FINISH: Black Anodized aluminum.

OPTIONS (add identifying letters as a suffix to model number):

Suffix "–E": Zeroing trimmer for the offset voltage of the voltage control channel. Price: $10.00.

Suffix "–R": Calibration control for the voltage channel's control current. Price: $10.00.

Suffix "–T": Lowered temperature effect coefficient: 0.005% per °C voltage mode; 0.01% per °C current mode. Price: $30.00.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: PCX are full-range, operationally programmable power modules. They can be programmed to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Voltage may be operationally controlled with the main control channel using the built-in stable reference and summing resistance together with an external voltage feedback rheostat. The ratio of reference voltage to input resistance gives a control current of approximately 1 milliampere through the external voltage feedback rheostat, for a control ratio of approximately 1000 ohms per volt. An external trimmer can be used to calibrate this value. Option "–R" provides for a built-in calibrating trimmer. External signals can be substituted for, or summed with, the internal reference for additional control. The feedback can be derived from other sensors to stabilize current, or such physical phenomenon as heat, speed, force or electrochemical action.

Operationally, PCX is a 3-terminal, unipolar, inverting, d-c amplifier in which the plus (+) output/sensing terminal serves as common between the output and an external programming signal.

For control with respect to the minus (–) output-sensing terminal, see Model NTC–200. For isolated digital control, see the type SN digital programmers in the *Programming Accessories* section of the Kepco Catalog.

OFFSETS: The equivalent offset voltage and current variations for PCX are tabulated for the effect of changes in source, load, temperature, and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the external feedback rheostat and R_i is the input resistor from the reference, E_r. Option "–E" offers a means of zeroing the fixed or initial part of the offset voltage, E_{io}, which otherwise is set somewhat negative to insure the ability to program zero.

GAIN: The open-loop d-c gain is in excess of 0.5 x 10^6 volts/volt.

REFERENCE: +6.2V d-c ±5% with respect to the plus (+) error-sense terminal, capable of supplying up to 1 milliampere.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The PCX is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by an internal trimmer over the range 10% to 105% I_o max. For the precision control of current, the uncommitted control channel may be connected so as to sample the drop across an external current sensing resistor in the plus (+) output lead. An external current feedback rheostat will control current from 1 milliampere to 100% I_o max. Models equipped with option "–E" can be controlled from approximately 1 microampere to I_o max. For a similar power supply module in which the main control channel is committed to current stabilization, see the CCP models in the Kepco Catalog.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT: The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 μsec.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE: As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the CCP group in the Kepco Catalog.

PROGRAMMING SPEED: The rate at which a PCX responds to a step-program is determined by the current setting, the load resistance and the tabulated output capacitance. For fast programming models, see OPS Group I in the Kepco Catalog.

SIMPLIFIED SCHEMATIC DIAGRAM

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each PCX model.

GENERAL

SERIES/PARALLEL: Units can be connected in series, up to the limit of their isolation voltage (500V) or in parallel. Terminals are provided for master/slave interconnection.

ISOLATION FROM GROUND: The circuit and output terminals of PCX have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption, approximately 50W. Power factor: 0.9, internally fused.

TEMPERATURE RATINGS

Storage: –40°C to +85°C.

Operating: –20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: PCX modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: Source power, d-c output, sense and control connections are duplicated on a PC connector and a barrier-strip. The connector mates with PC–1 and PC–8.

MOUNTING: Mount an uncased PCX module in a protected area using 6-32 hardware to tapped holes in the heat sink, or 8-18 thread cutting screws to the nylon standoffs provided. The uncased module can be mounted on a BPA–22 slide adapter for plug-in mounting in the RA 22–6A or RA–32 enclosure. Mount the cased model (see option "–C") by means of 6-32 hardware to any of three surfaces. The cased modules can be rack mounted into 19-inch equipment racks.

Model RA 12–1 mounts a single cased model.
Model RA 13–4 mounts up to four cased models.
Model RA 11–6 mounts up to six cased models.
Rack adapters are $15.00 each.

These power supplies, derivative of the PCX modules, offer a full complement of meters and controls on a compact one-sixth rack panel. They can be installed in rack housings RA 22–6A or RA–32 for systems use, or a variety of bench-style enclosures. The PCX–MAT are operationally programmable, too, with an I-C front end for low offsets and exceptional stability.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: PCX–MAT are full-range, operationally programmable power supplies. They can be set or programmed to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Output voltage is controlled by a panel-mounted, 10-turn rheostat. External control can be exercised by a resistance at 1000 ohms per volt (see option "–R") or by a control voltage delivering 0–1 mA. Control is fully operational with PCX–MAT power supplies functioning as inverting d-c power amplifiers. Their plus (+) output-sensing terminal is common.

For control with respect to the minus (-) output-sensing terminal, see Model NTC–200. For isolated digital control, see the type SN digital programmers in the *Programming Accessories* section of the Kepco Catalog.

OFFSETS: The equivalent offset voltage and current variation for PCX–MAT are tabulated for the effect of source changes, load temperature and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm \Delta E_r (R_f/R_i) \pm \Delta E_{io} (1 + R_f/R_i) \pm \Delta I_{io} (R_f)$$

where R_f is the panel feedback rheostat and R_i is the input resistor from the reference, E_r. Option "–E" offers a means of zeroing the fixed or initial part of the offset voltage, E_{io} which otherwise is set somewhat negative to insure the ability to program zero.

GAIN: The open-loop d-c gain is in excess of 0.5×10^6 volts/volt.

REFERENCE: +6.2V d-c ±5% with respect to the plus (+) output-sense terminal, capable of supplying up to 1 milliampere.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The PCX–MAT is equipped with a built-in current sensing and feedback arrangement for protective limiting. It is controlled by an internal trimmer over the range 10% to 105% I_o max. For the precision control of current, the voltage control channel may be reconnected so as to sample the drop across an external current sensing resistor in the plus (+) output lead. Using an external current feedback rheostat, the current range is 1 milliampere to 100% I_o max. The recommended ratio of current for any single current-sensing resistor is 50:1. Models equipped with option "–E" can be controlled from approximately 1 microampere to 100% I_o max. For equivalent units in which the main control channel is committed to current stabilization, please see the CC models in the *Special Purpose* section of the Kepco Catalog.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:
The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 μs.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:
As a current stabilizer, the recovery exponential is governed by the RC time constant formed by the load and the tabulated shunt capacitance. For fast recovery current stabilizers, please see the CC models in the *Special Purpose* section of Kepco's Catalog.

PROGRAMMING SPEED: The rate at which PCX–MAT responds to a step program is determined by the current setting, the load resistance and the tabulated output capacitance. For fast programming applications, please see OPS Group II in the *High Speed* section of the Kepco Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance.

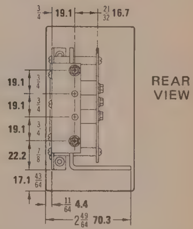
TOP VIEW



As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The model table gives these values for each PCX–MAT model.

GENERAL

SERIES/PARALLEL: Units can be connected in series, up to the limit of the isolation voltage (500V) or in parallel. Terminals are provided for master/slave interconnection.

ISOLATION FROM GROUND: The circuit and output terminals of PCX–MAT have no d-c connection to ground, and may be floated up to 500 volts (d-c or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: Units are factory-wired for 105–125V a-c, 50–440 Hz power. A simple jumper change will reconfigure the input for 210–250V a-c, 50–440 Hz. Power consumption approximately 50W. Power factor: 0.9; internally fused. Power is delivered via the printed circuit connector which mates with a connector in the selected housing. A pilot light and on/off slide switch are provided on the panel.

TEMPERATURE RATINGS

Storage: –40°C to +85°C.

Operating: –20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: PCX–MAT modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: Source power, d-c output, sense and control connections, terminate on a male PC connector that mates with the built-in socket in the bench housings or with the PC–2 socket used with the rack housings. (See *Hardware* section.) A pair of pinjacks on the front panel are provided for output monitoring.

METERS: Voltage and current are displayed on a pair of 2-inch recessed meters with an accuracy of ±3%.

MOUNTING: The PCX–MAT power supplies fit a single slot in the 6-unit housing RA 22–6A, the intermix housing, RA–32, and the three bench housings, CA–3, CA–4 and CA–5. They slide in on the provided rails, obtain power, and deliver their output to the mating connector. Refer to the *Hardware* section for details on the various enclosures.

Model RA 22–6A Rack Adapter(1)	Price: $99.00.
Model RA–32 Rack Adapter(1)	Price: $75.00.
Model CA–3 Case	Price: $25.00.
Model CA–4 Case	Price: $35.00.
Model CA–5 Case	Price: $45.00.

(1) Includes all PC–2 connectors.

KEPCO™ POWER SUPPLIES

PRM
MODULAR

ALL KEPCO PRM MODELS HAVE WON UNDERWRITERS' LABORATORIES RECOGNITION UNDER THE COMPONENT RECOGNITION PROGRAM; UL SPECIFICATIONS 114 AND 478.
Kepco PRM voltage stabilizers obtain their source-isolated, overload-protected output from a special sort of magnetic circuit in which a portion of the power transformer is resonated to stabilize voltage at a predetermined level. This ferroresonant stabilizing technique provides extraordinary isolation from a wide variety of source noise, is inherently short-circuit proof, exposes delicate loads to no overvoltage hazard, and is the heart of the simplest, therefore the most reliable, power supply you can buy.

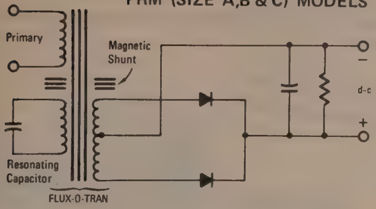
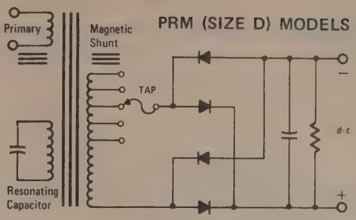
SIMPLIFIED SCHEMATIC DIAGRAMS

PRM (SIZE A,B & C) MODELS



PRM (SIZE D) MODELS



VOLTAGE STABILIZATION

OUTPUT RANGE: The Kepco PRM models are essentially fixed-output devices made in a variety of the most popular d-c voltages in four power classes:

60 watts, Size D	180 watts, Size A
120 watts, Size B	300 watts, Size C

The Size D Design offers a selection of fixed output settings for each model by means of a moveable tap.

The Size C Design has both a 300 watt capability (in a dual output configuration), and a reduced-ripple 180 watt class which incorporates an extra LC filter section.

OUTPUT ACCURACY: The output of a PRM is set to the nominal value within ±2% (or 0.25 volt, whichever is greater). This is the output at full load, 115 volts a-c input and 30°C ambient temperature after approximately one-half hour warm-up. Allow for an initial (cold) voltage approximately 1% higher. The output at loads smaller than the rated maximum may be determined by consulting the load effect curves, Figures 1, 4 or 5, and checking the curve that is specified for the model being considered.

NOISE: The output deviation at twice source frequency (ripple) is given in the tables for the maximum rms voltage. Figure 3 is a plot of the typical rms amplitude versus load current. The extra-filtered models in the Size C, 180F group have an additional LC section which attenuates the ripple by approximately a factor of 10. Figure 2 plots the ripple of the extra-filtered models versus load. The construction of PRM power supplies results in substantial isolation (more than 120 dB) from conducted "source noise" up to 1 megahertz.

CURRENT LIMITING

Automatic current limiting occurs between 125% and 150% of the rated maximum current (depending on the source voltage). A PRM limits its output current safely—and automatically recovers to a normal operating point when overload is removed. For a graphical representation of the overload characteristic. see Kepco's Catalog.

DYNAMICS

VOLTAGE RECOVERY FOR A 50% STEP-LOAD CURRENT: The time required for the stabilized voltage to recover within the load effect band is less than 400 milliseconds.

OUTPUT IMPEDANCE: The d-c impedance is a function of the load effect and may be determined by the slope ΔV/ΔI from the respective load effect curve (Figures 1, 4 and 5). Above 10 kilohertz add the effect of a 0.5 microhenry series inductance.

GENERAL

ISOLATION FROM GROUND: The circuit of PRM is isolated from its chassis and ground. It may be placed in series with up to 600 volts d-c (or peak) off ground. Common mode current from output to ground is less than 50 microamperes rms, 500 microamperes peak-to-peak at 60 Hz.

SERIES/PARALLEL: PRM modules can be connected in series up to the 600-volt isolation limit. Identical models, or halves of a dual supply, can be paralleled for approximately double current; allow for 10% imbalance. Note: on dual models, the maximum d-c (or peak) difference between outputs is limited to 50 volts.

SOURCE POWER INPUT: 115V a-c ±15V a-c, 60 Hz ±5%. The ferroresonant power transformer is frequency-sensitive and should be operated from a stable frequency source. (A 1% change in frequency will produce from 1 to 1.5% change in output voltage.)

OVERSEAS MODELS: For 50 Hz ±5% source frequency specify an option "−50." The primary for 50 Hz overseas models is connected for 230V ±30V a-c. Other source voltages may be accommodated by means of internal jumpers: 104V ±13.5V a-c, 115V ±15V a-c, or 208V ±27V a-c. The 20% lower frequency causes a corresponding derating of the output current. A 10-ampere model with the "−50" suffix is, therefore, rated at 8 amperes.

Power must be hard-wired to the terminals provided. Power requirements:

Size A, 180 Series,	3 amperes	280 watts
Size B, 120 Series,	2 amperes	180 watts
Size C, 180F Series,	3 amperes	280 watts
Size C, 300 Series,	5 amperes	465 watts
Size D, 60 Series,	1.1 amperes	100 watts.

TEMPERATURE RATINGS

Storage: −40°C to +85°C.

Operating: −20°C to +55°C. Cooling is by natural convection. Full output current is delivered at +55°C. No derating or external heat sink is required.

STANDARDS: PRM modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972. All PRM models are recognized by Underwriters' Laboratories under the UL Component Recognition Program; UL specifications 114 and 478.

TERMINALS: All input and output connections are made via a multiterminal barrier-strip located on one surface.

DIMENSIONS: *

English measure:

Size A Models: * 6 13/16"H x 4 3/4"W x 10 13/16"L.
Size B Models: 3 13/32"H x 5"W x 13 7/8"L.
Size C Models: * 6 13/16"H x 4 3/4"W x 15 1/8"L.
Size D Models: 3 13/32"H x 5"W x 10 7/8"L.

Metric measure:

Size A Models: * 173.0 H x 120.7 W x 274.6 L mm.
Size B Models: 86.5 H x 127.0 W x 352.4 L mm.
Size C Models: * 173.0 H x 120.7 W x 384.2 L mm.
Size D Models: 86.5 H x 127.0 W x 276.2 L mm.

See the Kepco Catalog for details on mounting centers.

*Dimensions, Models A and C are for uncased module.

ENCLOSURES: Size A and C units may be equipped with an optional dust cover.

CA–200 for the Size A model
CA–300 for the Size C model
(See *Hardware* section.)

To order a unit with the dust cover factory-installed, add the suffix letter "−C" to the model number and add $15.00 to the price. Note: The Size B and D models are housed in a unitized cover/chassis.

MOUNTING 19-inch rack mounting adapter panels include a variety of single and multiple unit panels. Please refer to the *Hardware* section in the Kepco Catalog.

FINISH: The Size B and D models have a blue anodized finish on their housing. The Size A and C enclosures, CA–200 and CA–300, are painted a royal blue with epoxy paint. The 19-inch rack adapter panels are painted a light gray, Color No. 26440, Fed. Std. 595.

Dual Output

Size D- 60 Series

The size D, Series 60 PRM modules are equipped with an adjustable tap arrangement, selecting two increments of voltage above the nominal output and two increments of voltage below the nominal output. In the table of voltages, the nominal (center) tap is indicated by the bold face type. The table of currents has a corresponding bold face column showing the current rating at the nominal voltage. The two adjacent columns on either side correspond to the respective voltage tap increments. The specifications are computed for the nominal (center) tap.

KEPCO POWER SUPPLIES

PTR
AUTOMATIC CROSSOVER

PTR are modular power supplies offering automatic crossover for voltage and current stabilization. An I-C front end in each channel contributes to very low offsets for accurate tracking of programming instructions. An optional overvoltage crowbar mounts within the module. Temperature ratings allow for full output at +71°C with no derating and no need for external heat sinking.

(2) External current sensing, using the *voltage* amplifier. Effects are measured for a 1-volt current sensing voltage drop.
(3) Whichever is greater.
(4) 5 mA with "–VP" option.
(5) Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.02% per °C internally sensed current mode; 0.01% per °C externally sensed current mode. See option "–T."
(6) One terminal grounded or connected so that the common-mode current does not flow through load or (in current mode) through a sensing resistor.
(7) 20 Hz to 10 MHz.

all KEPCO products are backed by a firm 5-Year Warranty

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: PTR are full-range, operationally programmable power supplies. They can be programmed to any level within their rated range and be fully loaded at any output setting.

CONTROL/PROGRAMMING: Voltage may be operationally controlled with this channel using the built-in stable reference and summing resistance together with an external voltage feedback rheostat. The ratio of reference voltage to summing resistance gives a control current of approximately 1 milliampere through the external voltage feedback rheostat for a control ratio of 1000 ohms per volt. An external trimmer can be used to calibrate this value. Option "–R" provides for a built-in calibrating trimmer. External signals can be substituted for, or summed with, the internal reference for additional control. The feedback can be derived from other sensors to stabilize current or such physical phenomena as heat, speed, force, or electrochemical action.

Operationally, the PTR is a 3-terminal, unipolar, inverting, d-c amplifier in which the plus (+) output/sensing terminal serves as common between the output and an external programming signal. For control with respect to the minus (–) output sensing terminal, see Model NTC–200. For isolated digital control, see the type SN digital programmers in the *Programming Accessories* section of the Kepco Catalog.

OFFSETS: The equivalent offset voltage and current variations for the PTR's voltage channel are tabulated for the effect of source changes, load, temperature and time. Calculate their effect on the output by the relationship:

$$\Delta E_o = \pm\ \Delta E_r\,(R_f/R_i) \pm \Delta E_{io}\,(1 + R_f/R_i) \pm \Delta I_{io}\,(R_f)$$

where R_f is the external feedback rheostat and R_i is the input resistor from the reference, E_r. Option "–E" offers a means of zeroing the fixed or initial part of the offset voltage, E_{io}, which otherwise is set somewhat negative to insure the ability to program zero.

GAIN: The open-loop d-c gain is in excess of 10^6 volts per volt.

REFERENCE: A +6.2V ±5%, 1 milliampere reference [referred to the plus (+) output/sense terminal] is provided for control offsetting or biasing purposes.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. An additional 1 volt is provided in the output, beyond the rating, for this purpose.

CURRENT STABILIZATION

The PTR is equipped with a built-in current-sensing and control channel for precision current stabilization with automatic crossover from and to the voltage stabilization mode.

OUTPUT RANGE: Current is controlled by an internal trimmer over the range 2% I_o max to 100% I_o max.

CONTROL/PROGRAMMING: Current may be externally controlled (programmed) by a remote potentiometer or by a small d-c voltage. The potentiometer functions as part of a divider across the internal reference delivering 0–0.5 volt to the current control terminal. This voltage (with respect to plus output) can be derived from a separate programming source such as, for example, the Kepco type SN Digital Programmer.

For a wider current control range, the voltage channel may be connected so as to sample the drop across an external current sensing resistor in the plus (+) plus output lead. An external rheostat will control current from 1 milliampere to 100% $I_o$max. Models equipped with option "–E" can be controlled from approximately 1 microampere to 100% I_o.

Select current-sensing resistors for less than 50:1 range of current through any single resistor.

MODE FLAG: PTR produces a "flag" signal, which indicates which channel controls the output. The flag is +5 volts (1 mA max) with respect to the plus (+) sense terminal when the current channel has control. The flag is approximately zero volts when the voltage channel has control.

DYNAMICS

VOLTAGE RECOVERY FOR A STEP-LOAD CURRENT:

The time required for stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) is less than 50 µsec.

CURRENT RECOVERY FOR A STEP-LOAD VOLTAGE:

The current recovery is an exponential defined by the RC time

OUTLINE DIMENSIONAL DRAWINGS

Fractional dimensions in light face type are in inches, dimensions in bold face type are in millimeters.

Tolerance: ±1/64" **(0.4)** between mounting holes.
±1/32" **(0.8)** other dimensions.

constant formed by the load and the tabulated shunt capacitance. For a fast-recovery current stabilizer, please see the OPS Group III in the *High Speed* section of the Kepco Catalog.

PROGRAMMING SPEED: The rate at which PTR responds to a step program is determined by the current setting, the load resistance and the tabulated output capacitance. For fast programming applications, please see OPS Group III in the *High Speed* section of the Kepco Catalog.

OUTPUT IMPEDANCE: Expressed as a function of frequency, the output impedance is a measure of dynamic stabilization. The d-c and low frequency value is given by the load effect. As a voltage stabilizer, the impedance increase above the stabilizer's cutoff frequency becomes asymptotic to a characteristic series inductance. As a current stabilizer, the impedance decrease above the stabilizer's cutoff frequency becomes asymptotic to a characteristic shunt capacitance. The table gives these values for each PTR model.

GENERAL

SERIES/PARALLEL: Units can be connected in series or in parallel. Terminals are provided for master/slave interconnection. Note: Units with optional overvoltage crowbar may not be used in parallel. Series operation up to rated isolation limit (500V).

ISOLATION FROM GROUND: The circuit and output terminals of PTR have no d-c connection to ground and may be floated up to 500 volts d-c (or peak) off ground. The common mode current from output to ground is less than 5 microamperes rms, 50 microamperes peak-to-peak at 115V a-c, 60 Hz.

SOURCE POWER REQUIREMENT: An internal switch selects either 105–125 or 210–250V a-c, 50–65 Hz (shipped with the switch in the 105–125V a-c position). Power must be hard-wired to the provided terminals. Internally fused. Source current approximately 1.2 amperes rms at 125V a-c. Power factor 0.9.

TEMPERATURE RATING

Storage: –40°C to +85°C.

Operating: –20°C to +71°C. Cooling is by natural convection. Full output current is delivered at +71°C; no derating or external heat sink is required.

STANDARDS: PTR modules are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: All input, output, control and sensing connections are made via a pair of barrier-strips located on one end. The built-in and optional trimmer adjustments are located behind the same surface, accessible for screwdriver-adjustment without removing the cover.

MOUNTING: PTR modules will mount on any of three surfaces using 8-32 hardware to recessed threaded inserts.

19-inch rack mounting accessories include:
Model RA 35–1 mounts a single unit on a 3½" high panel.
Model RA 33–3 mounts up to 3 units on a 3½" high panel.
Model RA 34–4 mounts up to 4 units on a 5¼" high panel.
Rack adapters are $15.00 each. Please refer to the *Hardware* section in the Kepco Catalog.

DIMENSIONS

English measure:
$3\frac{17}{64}$" H x 5" W x $13\frac{27}{32}$" L (inc. barrier-strip).

Metric measure:
83.0 H x 127.0 W x 351.6 L mm (inc. barrier-strip).

FINISH: Black anodized aluminum.

OPTIONS (add identifying letters as a suffix to model number):

Suffix "–E": Zeroing trimmer for the offset voltage of the voltage control channel. Price: $10.00.

Suffix "–R": Calibration control for the voltage channel's control current. Price: $10.00.

Suffix "–T": Lowered temperature effect coefficient:
0.005% per °C voltage mode; 0.01% per °C current mode.
Price: $30.00.

Suffix "–VP": Built-in overvoltage sensing crowbar.
Trigger time: Less than 10 microseconds.
Setting range: 4.8 volts (min.) to 110% E_o max.
Threshold: 5% E_o max. or 0.5 volt, whichever is greater.
Temperature effect on setting: ±0.03% per °C.
Price, factory installed: $25.00.

MANUAL PROGRAM GENERATOR
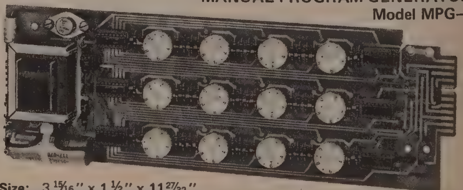
Model MPG–4



Size: 3 15/16" x 1½" x 11 27/32".
100.0 x 38.1 x 300.8 mm.
Pre-set storage of (4) 3-digit (BCD) programs.

KEPCO

ACCESSORY EQUIPMENT

FG-100A

Model FG–100A is an integrating-type triangular waveform generator, producing symmetric or asymmetric up and down ramps in the range 0–20V d-c. Independent high and low limit settings control the points of reversal which establish both the amplitude and frequency of the waveform.

CALIBRATED RAMP RATE[1] V/SEC	MAXIMUM TIME BASE SEC	RETRACE SPEED V/SEC	STOPPED DRIFT mV/hour	RAMP LINEARITY %	RAMP LINEARITY TEMP. EFFECT %/°C	UNPROGRAMMED OUTPUT DEVIATION (ripple & noise) rms	p-p[2]

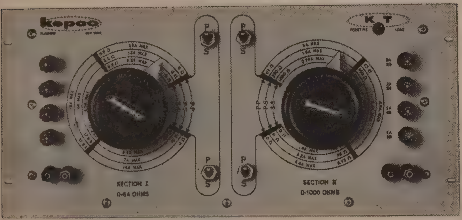
CURRENT CONTROL RHEOSTAT

KT–1304	0–1000 Ω (Rheostat Connected)	lugs	1 W	18.75	3 oz.	0.03

VARIABLE RHEOSTAT LOAD BANK



Model KT 6212 – Price: $787.00 – Shp. Wgt. 47 lbs.(21.4 kg.)

The Model KT 6212 is a multiganged, eight-section group of dual-wound power rheostats used in the testing of regulated power supplies.

Model KT 6212 consists of two independent gangs of four rheostats apiece, 0-64 ohms and 0-1000 ohms. The rheostats can be switched for parallel, series parallel and series operation. Each rheostat has heavy and light windings so that the maximum load current changes at approximately each third rotation point around the dial.

CONTROLS:
Switches select series and parallel combinations of the four ganged rheostats with the corresponding resistance and current rating designated by concentric bands.

Each band defines the resistance range for its particular connection with zero ohms (maximum current) in the clockwise position. The bands are divided into three sections that correspond to the position of the heavy and light windings, respectively. The maximum current in each section is shown on the corresponding portion of the band.

FUSING:
Each rheostat in the 0-64 ohm gang is fused at 7 amperes. Each rheostat of the 0-1000 ohm gang is fused for 2 amperes.

TERMINALS:
A pair of 5-way binding posts is provided at each gang for connection to the power source under test. These connections are duplicated at the rear.

EXTERNAL POWER REQUIREMENTS:
None. The Model KT 6212 is a passive device.

DIMENSIONS:
8¾"H x 19"W 13 5/8 "D. The Model KT 6212 resistive load is designed for mounting in standard 19" equipment racks.

Data and prices subject to change without notice

RACK ADAPTERS

Adapt bench style, modular and half-rack power supplies to the standard 19" wide equipment rack or cabinet. Panels and rack adapters are finished light gray Color 26440 per Fed. Std. 595.

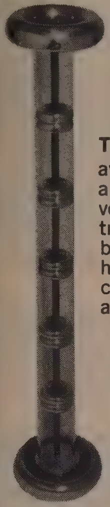
CORPORATION

238 HIGH STREET, HACKENSACK, NEW JERSEY 07602 • 201 488-7373

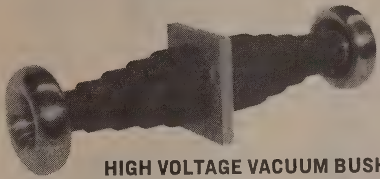
COME TO KILOVOLT CORPORATION WITH YOUR HIGH VOLTAGE PROBLEMS

In addition to our standard line of power supplies, insulation testers and power packs, we custom design units to meet exacting requirements.

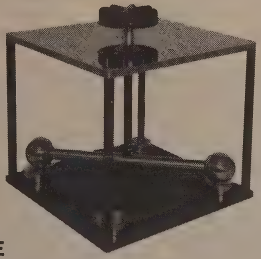
We also specialize in the design and manufacture of unusual auxiliary high voltage hardware and accessories.



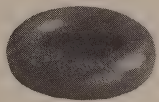
TERMINATING RESISTOR
available in ratings to 600 KV D.C. in air. Intended for isolation of the high voltage supply from the load where transients might be encountered. Can be had with provisions for plugging-in high voltage cable. These resistors are custom-built to meet your specific application.



HIGH VOLTAGE VACUUM BUSHING
for feeding high voltage from atmosphere into a vacuum. Models are available for voltages from 25 KV to 150 KV D.C.



HIGH VOLTAGE SELECTOR SWITCH SINGLE-POLE, DOUBLE-THROW
for operation under oil. Intended for "cold" switching of D.C. potentials to 250 KV D.C. Models are also available in ratings from 25 KV D.C.



PRECISION-SPUN TOROIDS
are available in sizes from four to forty-eight inches in diameter. They are used to minimize corona where high voltage is terminated in atmosphere and to reduce stresses where voltages are terminated in gas or oil.

KILOVOLT CORPORATION

PORTABLE DIELECTRIC TESTERS
Kilovolt manufactures a range of A.C. and D.C. Models similar to the one shown. Designed for convenience in moving from one location to another. The instrument panel is protected by a fold-back cover and a rack is attached to the back for storing cable. Models are available to 50 KV A.C. RMS - to 75 KV D.C.

HIGH VOLTAGE

POWER SUPPLIES • INSULATION TESTERS
ACCESSORIES • POWER PACKS

A pioneer in high voltage techniques, KILOVOLT CORPORATION designs and manufactures a wide variety of power supplies and insulation testers and power packs ranging from 1,000 to 1,000,000 volts. These units are soundly engineered, ruggedly constructed and conservatively rated. Units are custom designed for all types of industrial processing as well as experimental laboratory work.

In addition, KILOVOLT CORPORATION can furnish anti-corona hardware devices, isolating resistors, high voltage voltmeters and high voltage spark gaps. Why not check us for all your high voltage requirements.

HIGH VOLTAGE D.C. POWER SUPPLIES FOR INDUSTRY

FEATURES

- **Reversible Polarity Output (most models)**
- **Continuously Variable Output Control**
- **Adjustable Over-Current Shut-Off**
- **Adjustable Over-Voltage Shut-off**
- **Safety Interlock on H.V. Cabinet Door**
- **Zero-Start Interlock**
- **Dual Range Voltage and Current Meter**
- **Fail-Safe Output Shorting Mechanism**
- **Circuit-Breaker Operation**
- **Functional Pilot Lamps**
- **Surge Limiting Resistor**
- **External Interlock**

ELECTRO-MECHANICAL REGULATION. The above models may be ordered with either voltage regulation, current regulation, or both by means of a servo regulating system.

SATURABLE REACTOR CONSTANT CURRENT. By use of a saturable reactor in conjunction with any of the standard models above, the output current can be held constant to within approximately 10% of the preset level for load variations from short circuit to full load and to within 3% for a half-load to full load change.

REGULATED HIGH VOLTAGE D.C. POWER SUPPLIES

Highly regulated against input line variations or changes in load, these power supplies employ fast response electronic regulation.

FEATURES

- **Continuously Variable Output**
- **Overload Protection**
- **Zero-Start Interlock**
- **Cabinet Interlock**
- **Provisions for External Interlock**
- **Reversible Polarity Output (most models)**
- **Circuit Breaker Operation**
- **Monitoring Pilot Lamps**
- **Electronically Protected 4½″ Meters**

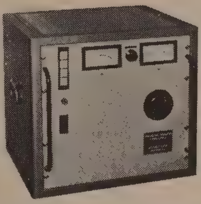
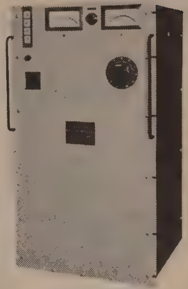
REGULATED HIGH VOLTAGE D.C. POWER SUPPLIES (cont'd.)





CURRENT REGULATION. Voltage regulated power supplies can be provided with current regulation capability on special order.

HIGH-VOLTAGE D.C. INSULATION TESTERS

FEATURES

- Reversible Polarity Output (most models)
- Continuously Variable Output Control with Vernier Adjust
- Adjustable Overcurrent and Overvoltage Shutoffs
- Safety Interlock
- Provision for External Interlock
- Zero-Start Interlock
- Triple Range Current Meters
- Triple Range Voltage Meters
- Fail-Safe Output Shorting Mechanism
- Meters Electronically Protected
- Functional Pilot Lamps
- Selenium Rectifiers
- Surge Limiting Resistor
- Circuit Breaker Operation

HIGH VOLTAGE A.C. INSULATION TESTERS

for Dielectric Testing under ASTM, MIL and Federal Specs.

FEATURES

• Motor-Driven output control with djustable speeds permits selection f proper rate-of-rise for various pecification testing. • Plexiglas, afety-Interlocked Access Door • 1/2" Memory-type Voltage Meter • unctional Pilot Lamps • Dual ange Circuit Breaker Operation • Plug-in Test Jigs available, most odels.

HIGH VOLTAGE D.C. POWER PACKS

These units are high voltage sections of standard power supplies minus meters and controls and contain the basic components described for standard power supplies — filter system, fail-safe mechanism, surge resistor, meter multiplier, primary gaps, etc.

HIGH VOLTAGE HARDWARE AND ACCESSORIES

MULTIPLIERS AND DIVIDERS. High voltage resistance strings, accurate to 0.15% or better with division ratios which may be specified. Stability is 25 PPM/°C; current drain 1 ma. Accuracy traceable to NBS standards as an option.

ELECTRONIC CROWBAR designed to protect Klystron or other sensitive loads from damage by discharge of power supply energy can be manufactured into your custom-built power supply or provided as separate devices. A typical unit has a response time of 3-5 microseconds and is capable of discharging five microfarads in approximately one millisecond at 20 KV.

CALIBRATED SPARK GAPS provided with micrometer calibration and may be used for determining crest voltage.

HIGH VOLTAGE OUTPUT BUSHING. Oil filled and terminated with anti-corona toroids, these devices are designed for oil-to-air outlet of very high voltages; available in two ratings, 300 and 600 KV D.C.

LH RESEARCH

LH RESEARCH, INC., 2052 South Grand Avenue, Santa Ana, CA 92705 • (714) 546-5279

LH Switching Regulated Power Supplies

- ☐ 80% efficient
- ☐ 250 to 1500 watts
- ☐ Single, dual, triple and quad DC outputs
- ☐ 115/230 AC, or DC inputs
- ☐ 10 different case shapes
- ☐ Smallest and lightest designs available

Hundreds of standard models priced as low as 65 cents per watt!

250 to 1500 watts

LH offers 8 standard wattage ratings — 250, 300, 500, 600, 700, 1000, and 1500, plus a double dual with two isolated 250-watt outputs. This is the most comprehensive line of high-efficiency switchers available anywhere.

4 outputs, fully regulated

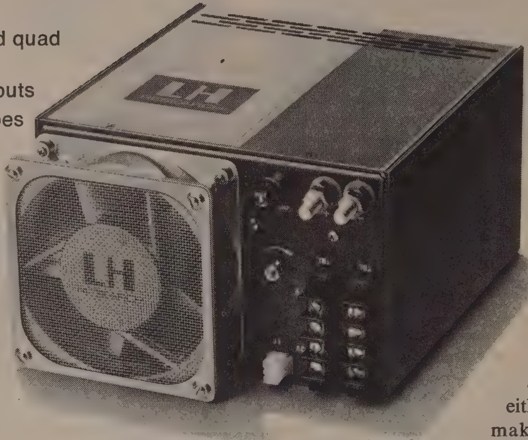
Standard LH switchers are available with single, dual, triple or quad DC outputs. All outputs are fully regulated as a standard feature.

Low DC voltage, high power outputs

Primary outputs are 5 VDC at 50, 100, 120, and 300 amps; 2nd and 3rd voltages are standard ±12, ±15, and ±18V at 8 amps each; 4th voltage is 24V at 2 amps. Other voltages available.

Input voltages externally selectable

115/230 VAC, 47 to 440 Hz, can be selected by simply changing a jumper on the front terminal strip. DC input 24, 48, 120 VDC and others available.



Pictured is the super-compact, forced-air cooled 700 series with 700-watt multiple output, weighing only 11.5 lbs.

10 case configurations

All LH switchers use one basic proven design, and package it in eight different case shapes — wide and short or narrow and long — for customer convenience. With a nominal power density of 1.37 (and as high as 2.5) watt/cu. in., LH switchers pack more power into a smaller package than any other switchers you can buy.

80% efficient

On single output models, over 80 percent of the primary input power is delivered to the output terminal. On models with multiple outputs, efficiency averages 75 percent.

Lighter weights

LH's 250-watt single output model weighs only 7 lbs.; the 1500-watt less than 20 lbs.

A number of options

Over-voltage protection (which is standard on some outputs), power fail detection, remote on-off, DC input, paralleling, master-slave paralleling (up to ten units) — all are available to adapt LH switchers to a wide range of applications.

Easy maintenance

True modular construction — all components are mounted on either two or three circuit boards — makes servicing easy. The entire switcher can be disassembled in less than five minutes.

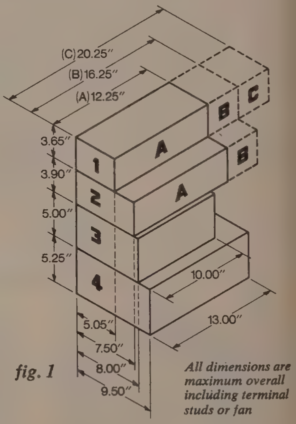


fig. 1

All dimensions are maximum overall including terminal studs or fan

Ask for full-line folder

The LH rep in your area has a new six-page folder that fully describes the several hundred standard LH switchers, and discusses possible options and modifications to meet specific requirements. Ask him for a copy today.

High power switchers exclusively
(that's why we're No. 1)

LH RESEARCH

LH RESEARCH

One of these LH models will probably meet your power supply needs

The following table lists all LH Switching Regulated Power Supply models. The table includes all output voltage and current information plus the price, weight, and physical configuration of the unit.

This last parameter is described on the case notation, which refers to the corresponding dimensional drawing found in figure 1. The numerical digit is, of course, the case format; the letter is the case length code.

The numerical digits of the model number designate the power supply series and model within that series. Total maximum wattage is a function of the series and is listed in the table below. This table also summarizes the other output characteristics of the LH power supplies.

If your needs are not met by one of these units with the options and optional features described herein, contact our offices directly for a quote on a special unit or modification.

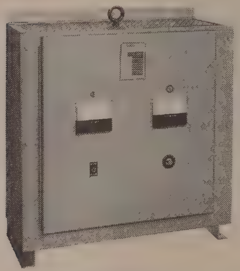
LAMARCHE... SUPPLYING RELIABLE POWER FOR CRITICAL APPLICATIONS FOR 30 YEARS.

FLOAT BATTERY CHARGERS



The model A-11 Float Battery Charger is a completely automatic, solid state, constant voltage device having:

AC VOLTAGE COMPENSATION — DC VOLTAGE REGULATION — CURRENT LIMITING

The A-11 charger is designed and built to carry continuous and intermittent loads up to its maximum rated output. The A-11 is current limited at 140% of rated output. Each unit is designed to charge a specific type of battery containing a specific number of cells.

The LaMarche transistor-controlled, magnetic-amplifier circuits provide continuous taper charging. Rated output voltage is maintained within ±1% from no load to full load with AC input variations of ±10%. Silicon diodes are used, for rectification.

The model A-11 charger floats lead-acid or nickel-cadmium batteries. Both float and equalize voltages are adjustable to meet battery manufacturers' recommendations. This type of charging imparts the longest battery life and is the accepted method for charging batteries used in standby service.

Design Features:

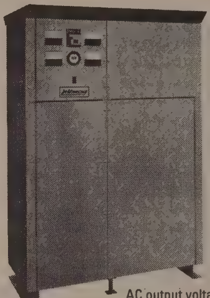
- Quality parts throughout. Silicon diode rectifiers and transistor magnetic amplifiers used exclusively.
- AC power loss relay, output voltmeter/ammeter and fused input-output are standard on all models.
- Eighty types and sizes are available in five input voltages.
- Adjustable equalize and float levels; float-equalize controls located on face panel for easy operation.
- Design and operation tested and approved by battery manufacturers, utilities, railroads and military.

Standard accessories supplied:

1. Potentiometer for desired float and equalize charge voltage adjustments.
2. Quality DC ammeter and voltmeter with 50-millivolt movement, 2% accuracy.
3. Power-failure relay with terminals for connections to a remote alarm system.
4. Fused AC input and DC output for complete protection.
5. Convenient switch to transfer from float charge to high rate equalize charge.
6. Internal terminal board for easy connection of AC input, DC output and power failure equipment.

INVERTERS

DC-to-AC power source with regulated sine wave output



The LaMarche Model A-51 is a completely solid-state SCR inverter which provides a regulated, sine wave output for such applications as:

- Boiler Controls
- Telephone and Microwave Communications
- Burglar Alarms
- Supervisory Control Equipment
- Data Processing and Telemetering Equipment
- Nuclear and Missile Installations
- P.A. Systems
- Fire Alarms

Model A-51 120-volt AC — 60 Hz sine wave output

SPECIFICATIONS

AC output voltage	120 volts nominal
Line regulation	±1% for ±15% DC change
Load regulation	±2% no load to full load
Frequency	60-cycle nominal
Frequency stability	±1% for load, input voltage and temperature variations
Wave shape	Sine wave
Distortion	Approximately 7%
Overall efficiency	Approximately 65%
Ambient temperature	—20° to 60°C (0° to 140°F)

FILTERED DC POWER SUPPLIES

Design features

- Silicon-diode rectifiers.
- Current-limiting circuit.
- Automatic AC voltage compensation.
- DC voltage regulation.
- Output ammeter and voltmeter.

These units are solid-state, fully automatic, constant-voltage DC power supplies designed for all regulated applications.

Standard features include automatic AC line compensation, DC voltage regulation and current limiting. The LaMarche transistor-controlled, magnetic amplifier circuit is designed to automatically provide a DC output regulation of ±1% on the Model A-29 and ±5% on the Model A-28 from no load to full rated output. Accurate output regulation is maintained with AC line variations of ±10%. Offered in a wide range of sizes and voltages.

Also... voltage-sensing relays and DC-to-AC converters for a wide variety of applications.

1,000 CHARGERS IN STOCK AT ALL TIMES, READY FOR NEXT-DAY SHIPMENT.

LAMARCHE

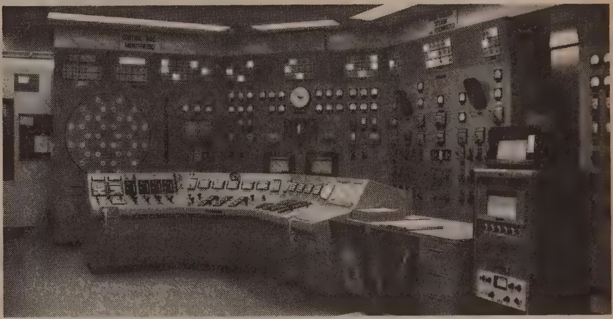
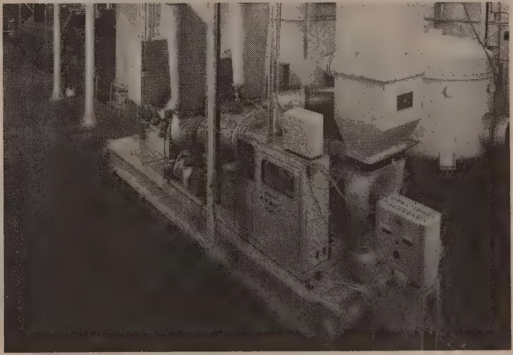
Electric utilities install LaMarche equipment for supervisory control, microwave communications and switchgear tripping.

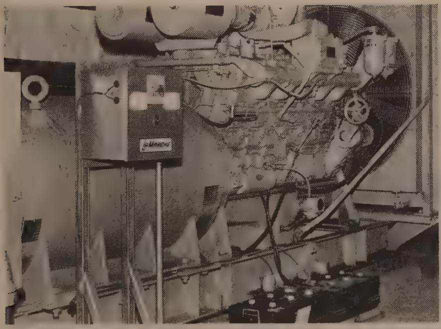


Where absolutely reliable battery charging or an alternate source of AC power is mandatory, such as at this nuclear power plant, LaMarche is a safe specification.

This huge apartment/hotel/shopping complex uses LaMarche equipment for dependable standby power.

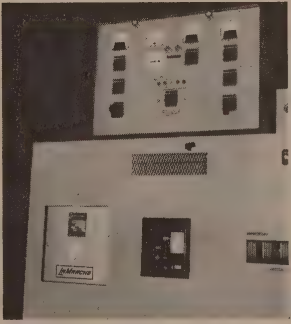


LaMarche charger at U.S. Government agency.

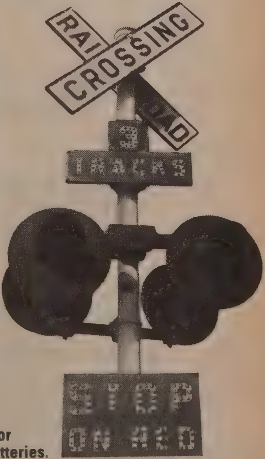


LaMarche battery charger installation at state institutional facility.

All LaMarche chargers are UL listed.



This LaMarche trickle charger is a popular choice at telephone power installations throughout the country.



LaMarche chargers are used extensively by railroads for crossing signals, microwave facilities and car lighting batteries.

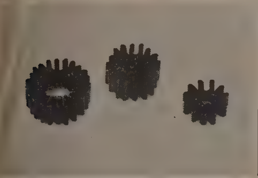
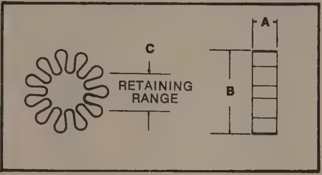
TR SERIES TRANSISTOR HEAT RADIATORS





TYPE	DIMENSIONS A	DIMENSIONS B	DIMENSIONS C
TR 101	.250	.600 .650	.290 .400
TR 120	.185	.600 .650	.290 .400
TR 108	.250	.650 .825	.360 .525
TR 118	.150	.450 .500	.150 .200

- Protect TO-packaged transistors from destructive heat rise
- Provide up to 4 sq. in. radiating surface in close thermal contact with package
- Self-adjusting. Sizes for TO packages listed with tolerances as specified by JEDEC.
- May be PC-board mounted
- Beryllium copper #25 with black ebanol finish

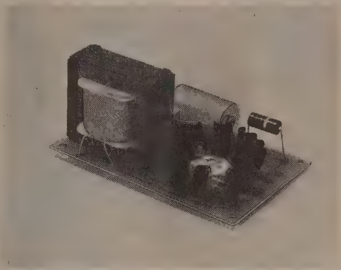
Self-adjusting to the following outlines:

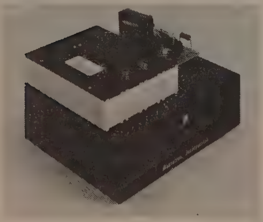
TR 118	TO-18
TR 108	TO-8
TR 101	TO-5, TO-9, TO-11, TO-12, TO-16, TO-29, TO-33, TO-39, TO-42, TO-43

TO ORDER: SPECIFY TYPE NUMBER.

CURRENT-REGULATED BATTERY CHARGERS

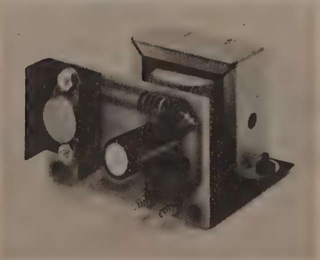
- Complete line, 20 mA to 50A output current
- Chargers available for all output voltage ranges
- Multiple-cell series-charging capability
- PC card, rack, or wall mounting
- Input frequencies available from 40 to 400 Hz.
- Current regulation ±2% (1%, 3%, or 5% available)
- Options include meters, timers, dual charge rates (full and trickle) and multiple current ranges (laboratory-type chargers).





POWER-PAKS

- Nickel-cadmium batteries integrally packaged with Mauratron's transistorized, current-regulated chargers
- "Dierdre" Power Paks: Pressed pocket-type plates for average discharge rates, long cycle life
- "Sean" Power Paks: Sintered plate type for high discharge current loads, extremely long cycle life
- 115 VAC, 60 Hz inputs (25 Hz to 400 Hz available)
- Ideal for standby power for controls, uninterruptible power systems, etc.



GELLED-ELECTROLYTE BATTERY CHARGERS

- Voltage regulated chargers specifically designed for gelled electrolyte batteries
- Models available for "float" installation or recharge in 16 hours
- Recharges unlimited number of cells
- Models available for all standard Gelled Electrolyte Batteries

MID-EASTERN INDUSTRIES

• About Mid-Eastern Industries

Mid-Eastern's engineering experience in the design and manufacture of standard and custom power supplies covers a span of 16 years. Over this period Mid-Eastern power supplies have proven their performance in computers, data processing, communications, nuclear research, machine tools; medical apparatus, ground support equipment, process controls and many other special applications.

• How to Select a Power Supply

The selection chart has been arranged so that you can choose the features you desire and then locate the Mid-Eastern power supply that contains those features. The power supplies listed are all standard production units and are usually delivered from stock. If a standard power supply does not meet all your requirements, Mid-Eastern will custom build for you. For more details, refer to Custom Power Supplies and Systems.

• Warranty

Mid-Eastern power supplies are backed by an unconditional repair or replacement warranty for one year after date of sale.

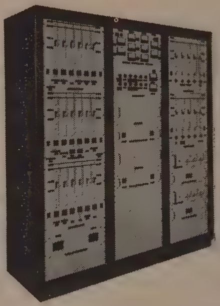
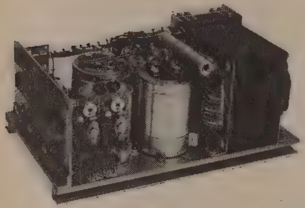
Custom Power Supplies and Systems

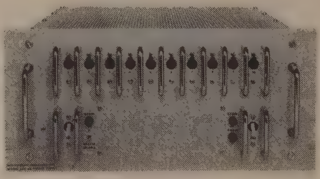
In addition to standard power supplies, Mid-Eastern designs and manufactures special power supplies and power distribution systems to customer specifications. A few custom devices are shown and their applications briefly described to demonstrate the broad scope of Mid-Eastern's experience in this field. If your needs are special, this experience can be of value to you. Whether you need a power supply with unusual outputs, features or dimensions, or a complete power distribution system, take advantage of Mid-Eastern's free consultation service. There is no obligation. Call your local Mid-Eastern representative or direct an inquiry to the factory.



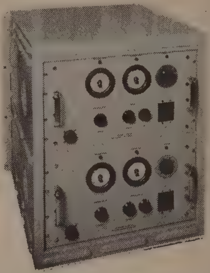
Regulated, no-break, redundant power distribution system with battery back-up for petroleum processing industry.



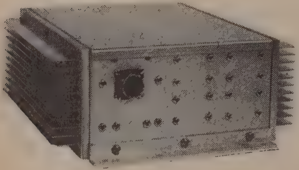
Regulated multi-output power supply for mini-computer.



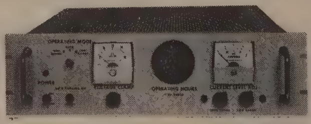
Regulated no-break, redundant 24-volt dc, 15-ampere, 10-channel power distribution system for television studios.



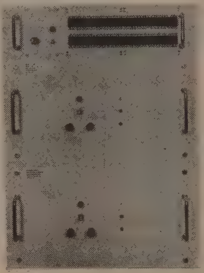
High power, 150-Volt, constant current//constant voltage, shipboard-qualified power supply.



Mil Spec 4 output regulated power supply.



Automatic constant current battery charger with automatic range selection based on battery temperature and voltage level.



Regulated no-break, redundant power distributior system for military application.

NOTE: Not pictured are these special devices: (a) Power supply for CW lasers; (b) Redundant power systems for military telephone communications systems; (c) Xenon lamp power supplies; (d) True RMS regulated ac power supplies; and (e) High current dc power supply for automotive production line testing.

• Applications Assistance

Mid-Eastern power supply experts will welcome the opportunity to assist you and to recommend the best standard or custom power supply for your intended application. Request assistance from any Mid-Eastern representative or consult the factory.

• Additional Literature

Send for a free copy of Mid-Eastern's full-line power supply catalog. It contains detailed technical descriptions and specifi-cations for all Mid-Eastern standard power supplies. Not al types and models are listed in EEM. Literature is also avail-able on custom power supplies. Please request it.

MIL ELECTRONICS has an extremely large selection of cataloged DC to DC and AC to DC power supplies. There are over 1000 different models available in this catalog with output power ratings of one, through twenty-five watts and output voltages from four to four thousand volts.

MIL ELECTRONICS designs and manufactures their own magnetic components. A fully staffed engineering department is constantly developing new products and upgrading the old. The quality of the end product has made MIL ELECTRONICS a leader in the power conversion field.

MIL ELECTRONICS reserves the right to make any changes in design, or to make additions and improvements in its products without imposing any obligation on itself to make similar changes in its products previously manufactured. Specifications and prices are subject to change without notice.

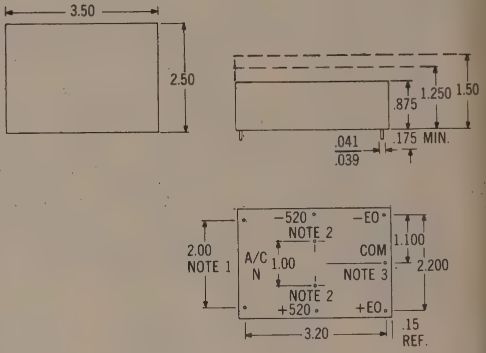
MIL FOR PERFORMANCE

Mil has taken every step to insure that you will receive a quality product at the lowest possible price.
Only quality components are used to insure safe and reliable operation. Specialized equipment such as the soldering line and custom transformer winding machinery have been installed to enable Mil's engineering department to optimize power supply design to your exact needs.



ELECTRICAL SPECIFICATIONS

Input: 105 to 125V A/C, 220V A/C Available Option K
Ripple and Noise: 1 mv rms
Regulation For Load: −0 to F/L .2%
Regulation for Line: .05%
Temp. Coefficient: .02%/°C
Temp. Operation: −25°C to +71°C
Temp. Storage: −55°C to +85°C
Isolation: 50 meg. Ohms.
Hi Pot: 1500 VDC

PHYSICAL SPECIFICATIONS

Mounting—PC Pins
(2) 4-40 Inserts
Case Finish—Diallylphthalate, Black
Semiconductors—All Silicon
Encapsulation—Epoxy

NOTE 1 2.200 spacing Available. Ask for Option "W".
NOTE 2 Used on Triple Output Models only.
NOTE 3 Not used on Single output models.

CRT AND HV POWER SUPPLIES

If your requirement is for a high voltage supply up through the 20KV range, MIL Electronics Inc. has in development proven HV Designs which may be used to meet your standard or custom needs.

For a power supply to meet your particular application, contact factory directly for prompt attention to your specific needs.

MIL ELECTRONICS *176 WALKER ST., LOWELL, MASS. 01854 (617) 453-4142 (617) 452-8981 ... OR TELEX 94-7490*

CUSTOM BUILT AC/DC POWER SUPPLIES, INDUSTRIAL AND LABORATORY TYPES,

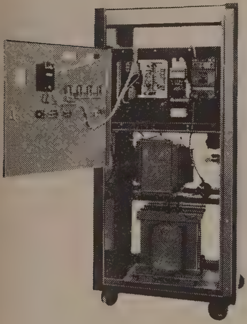
TO YOUR SPECIFICATIONS – HIGH OR LOW CURRENT, VOLTAGE OR FREQUENCY, CONSTANT OUTPUT, PRECISE REGULATION FOR SPECIALIZED APPLICATIONS

Manufacturing power supplies utilizing forced air, water, natural convection and oil cooling systems; both regulated and non-regulated using saturable reactor; variac or SCR controls.

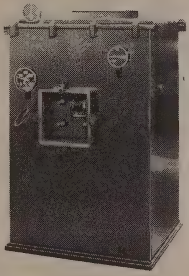
75 KVA water-cooled SCR controlled supply for electric melting furnace.

MANUFACTURING RANGE

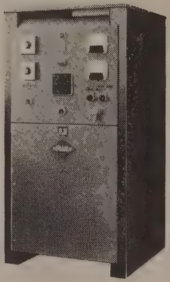
Up to 150 KV
1 ma to 50,000 AMP
4 Hz to 20 Khz
5 KVA to 2000 KVA
50 lb. to 15,000 lb.



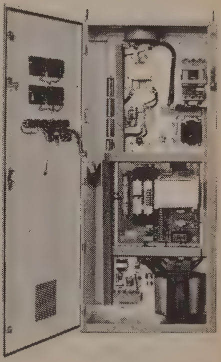
45.5 KVA Saturable Reactor controlled precisely regulated high voltage power supply for sputtering film application.



This unit is typical of our oil-filled power supplies and is rated 45 KV DC at 1 amp output.



Distortion free high current low voltage programmed power supply with precise regulation used for laboratory component testing.



Solid State SCR type Controller with current limiter and spark rate control used with an NWL manufactured Transformer Rectifier set.

NWL also manufactures various types of power transformers, reactors, chokes. See our full page ad in the transformer section of EEM.

Our engineers are available to assist you in selecting magnetic components to meet your application requirements.

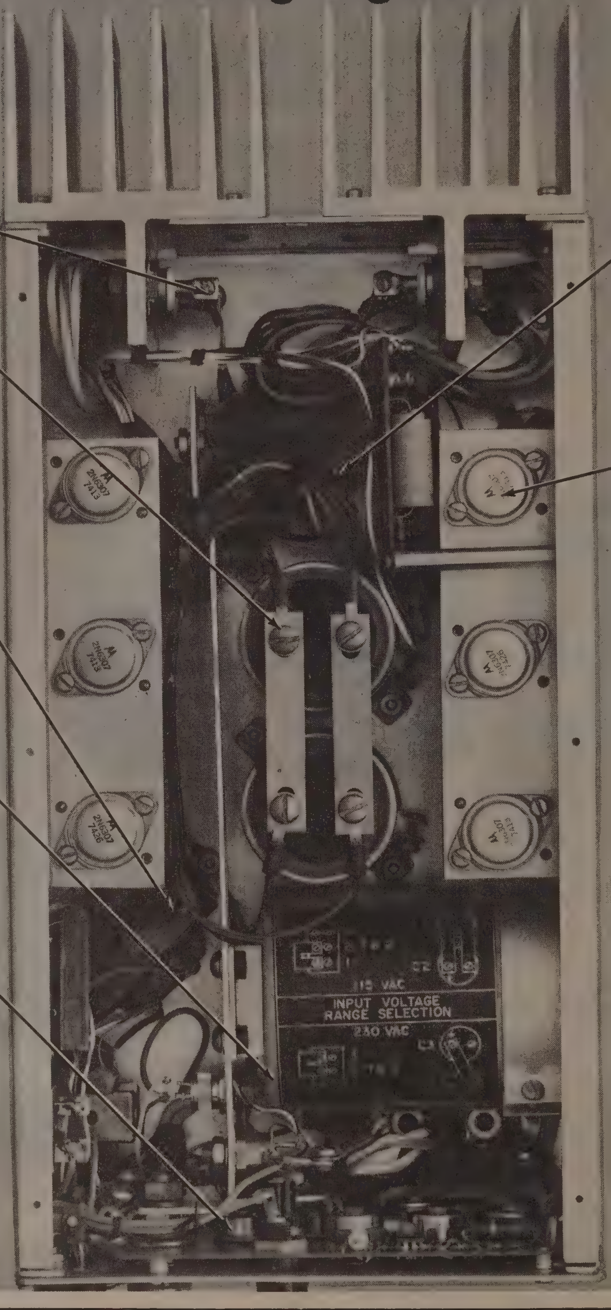
SWITCH WITH NJE

NEW Energy Saver™ Power Supplies

Switching Regulated



80% EFFICIENCY
High speed low forward drop diodes provide efficiencies up to 80%.

20 MILLISECOND POWER HOLDUP
Simple strapping of input caps allows change of input voltage from 115 VAC nominal to 230 VAC nominal. Large input capacitance provides energy storage for at least 20 ms during power failures.

RFI and SOFT START
Input circuitry includes RFI filtering, and "Soft Start" to prevent high input current surges.

LOW RIPPLE
Use of extremely low ESR stacked foil output capacitor produces low output ripple and excellent transient response.

AUTOMATIC RECOVERY FOR OVP and OCP
New concepts in circuit design greatly simplify switching circuitry through use of integrated circuits. Unique features include automatic recovery from overvoltage and an overcurrent trip circuit which reduces average short circuit current to below 10% of maximum.

UNIQUE TRANSFORMER DESIGN
Pulse width modulated transformer operates at 20 KHZ carrier frequency. Provides full regulated output to 88 volts RMS input.

MULTIPLE SWITCHING TRANSISTORS
Super high reliability with over 1 Joule of secondary breakdown capability.

OPERATING CHARACTERISTICS

AC INPUT REQUIREMENTS

Voltage, RMS	88 to 132 volts and 176 to 264 volts (See Note 1)
Frequency, (Hz)	47 to 440
Starting Current	Slow or "Soft" start characteristic avoids current surges
Noise Generation (RFI)	Input filter provides noise suppression and maintains line integrity

PERFORMANCE

Output Voltage	See Model Table
Output Voltage Adjustment	± 5% of nominal
Output Current	See Model Table
Line Regulation	0.1% + 5mv for a 10% line change
Load Regulation	0.1% + 5mv, NL to FL
Ripple and Noise	0.2% RMS; 1% p-p max.
Stability	0.1% after initial warm-up
Overshoot	None
ransient Response	
Recovery Time	Returns to within 1.0% of nominal within 500 microseconds (50% of load step)
Excursion for load steps from nominal load	2% max. for 25% step 3% max. for 50% step
emperature Coefficient	0.02%/°C
Efficiency, Typical	65% for 5 volt units; 80% for 28 volt units. See options for 75% 5 volt units.

Note 1: All units may have the input voltage changed from one to the other of the stated ranges by internally shifting two jumpers. Units will be shipped for 88-132 input volts operation unless specified.

FEATURES

Temperature:
Operating: 0° to +71°C (See Model Table)
Storage: -55° to +85°C

Remote Output Voltage Control: Logic "1" at control terminal brings output voltage to zero automatically.

Remote Voltage Sensing: Terminals are provided to maintain regulation at the load to compensate for up to 0.5 volt line drop.

Overload Protection: Input power drops to zero when overloaded, but restores automatically to normal operation when overload disappears. Adjustable from 75% to 125% of nominal.

Overvoltage Protection (OVP): Standard on all 5 volt units; optional for other voltages. Automatically restarts when overvoltage condition disappears without having to recycle input power.

Accessible Controls: Output voltage adjust; Overvoltage adjust (where provided)

Internal Controls: Overload; (Note: Input voltage range is shifted by shifting two jumpers.)

Output Connections: Studs; Terminal Board connections for remote sensing and remote output voltage control.

Input Connections: Terminal Board

Cooling: Natural convection (see Operating Temperature and Model Table).

Transformer Design: Rugged, vacuum impregnated to comply generally with the requirements of MIL-T-27B, Grade 6

Case Finish: Iridite

Mounting: Tapped holes on each of the two or three mounting faces (See Model Table).

Power Interrupt: Output Voltage will remain within basic performance characteristics when input is interrupted for 20 ms.

AVAILABLE OPTIONS

Overvoltage Protection (OVP): Units not provided with OVP as standard, are available with this feature as an option (Contact Factory)

High Efficiency (HE): 5 volt units are available for typical 75% efficiency in lieu of 65%. (Contact Factory)

Early Warning Signal (EW): Output logic "O" signal alerts user to impending loss of output (within 10 milliseconds). (Contact factory)

Low Ripple (LR): For units to be furnished with more stringent ripple requirements, 5 millivolts rms option is available. (Contact Factory)

RFI (RF): Units may be specified to meet the input requirement CEO3 of MIL-STD-461. (Contact Factory)

TBC: Units so specified will be provided with a Terminal Board cover. (See Table for prices)

E: Moisture and fungus resistance coating furnished on certain pc boards (Contact Factory)

B: Uninterruptible operation — battery standby available. (Contact Factory)

ENERGY SAVING POWER

- **Switching Regulator Circuitry*(20KC)**
- **Power Supplies to Combat "Brown-Out" (88V-132V Input)**
- **Power Failure Absorbed within its Design (20 ms holdup)**
- **Two User Settable AC Input Voltages (88-132) or (180-260)**
- **High Efficiency Performance (65-80%)**
- **Small Size and Greatly Reduced Weight per Watt**

MANUAL & DIGITAL

PRECISION CURRENT SOURCES

ACCURACIES TO 0.01%

FEATURES:

- Digital In-line Current Setting and Readout.
- 5 or 6 Decade Dividers for Setting to 1 Part in 100,000 or 1 Part in 1,000,000 of Full Scale.
- Uni- and Bi-Polar Models.
- External Modulation Capability.
- Externally Programmable Models.
- Automatic Protection Circuits.

STABILITIES TO 2 PPM

APPLICATIONS:

- Laboratory and Production Testing of Semiconductors, Gyros, Lamps, Meters, Thermistors, etc.
- Systems requiring a Precision Constant Current Setting such as X-ray Equipments, Electron Beam Welders, and Electron Beam Microscopes.

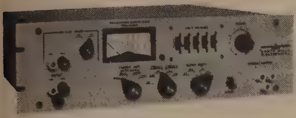
PRECISION CURRENT & VOLTAGE SOURCES

PRECISION VOLTAGE/CURRENT SOURCES

These highly stable and accurate precision sources can be operated in either constant voltage or constant current modes.
All models include such features as manual and remote programming, and output voltage regulation by either local or remote sensing.
Voltage and current outputs are selected on decade switches whose markings form an in-line digital readout.

Automatic protection limits output voltage and current to safe levels. No voltage or current overshoot occurs during turn-on or turn-off. A warning indicator alerts the operator if the actual output should differ from the dialed setting beyond the specified limits. Models TC-100.2BR and TC-602CR include a panel meter to monitor output current.



TC-602CR

AC-AC FREQUENCY CONVERTERS 50 Hz, 60 Hz, 400 Hz

SPECIFICATIONS:

AC INPUT

Voltage: 105 to 125VAC, 1φ (other voltages and 3φ available).

Frequency: 48 to 440 Hz.

AC OUTPUT

Voltage: 117VAC, single phase (other voltages and phases available).

Voltage Regulation: ±1% for line or load.

Voltage Adjustment Range: ±10% of nominal.

Frequency: 60 Hz (50 Hz and 400 Hz available with same spec's, see ordering information).

Frequency Regulation: ±0.15% for line and load.

Frequency/Temperature Coefficient: 0.01%/°C.

Frequency Adjustment Range: ±5% of nominal.

Transient Response: Less than 50 ms for 100% load change.

Maximum Distortion: Less than 4% worse case.

CIRCUIT PROTECTION

Input circuit breaker.

Short circuit protection.

Output automatic current limited.

Thermal protected.

OTHER FEATURES

Load Power Factor Range: 0.7 lagging to 0.7 leading.

Operating Temperature: −20 to +50°C.

Two Mounting Surfaces: Front and bottom.

All units adaptable for rack mounting with addition of front panel.

OPTIONAL FEATURES AND ACCESSORIES

**These units are available with 60 Hz output only.

Terms — Net 30 F.O.B. Nutley, New Jersey

ORDERING INFORMATION

Model numbers for 50 Hz and 400 Hz output converters 125VA and larger are obtained from the equivalent 60 Hz model (FC25 60 U) and insert the number 50 or 400 in the space where the 60 appears. Therefore the new model for 50 Hz is FC25 50 U and for 400 Hz is FC25 400 U. Units 120VA and smaller constitute Nova's Miniature line and are available only in the frequencies indicated by the asterisk.

Weights on 50 Hz converters are approximately the same as the 60 Hz units; the 400 Hz inverters weigh about 25% less. Dimensions essentially remain the same.

Pricing for 50 Hz and 400Hz converters—add 10% to the 60 Hz price.

THREE-PHASE FREQUENCY CHANGERS

SPECIFICATIONS:

Input Range: 115V ±10%.

AC Input: 48-440 Hz.

Input Configuration: 1φ 115V.

Output specifications same as for corresponding fixed freqjuency inverter types.

WARRANTY

NOVA ELECTRIC Manufacturing Company warrants each instrument manufactured by it to be free from defects in material and workmanship. Our liability under this warranty is limited to repairing or replacing any unit or part thereof which shall within one year after delivery to the original purchaser, be returned to us with transportation charges prepaid and prove after our examination to be thus defective. Our warranty for this instrument is rendered void if the unit has been modified, or if it has been subject to operating conditions inconsistent with the specifications as outlined in this catalog, unless such changes or operation have been made in accordance with written instructions received from NOVA ELECTRIC. NOVA ELECTRIC reserves the right to discontinue particular models without notice, and to make modifications in design at any time without incurring any obligations to make such modifications to units previously delivered.

NOVA ELECTRIC shall not be liable for any operation delays or consequent damages under this warranty. There shall be no other obligation expressed or implied.

ORDERING INFORMATION

Model numbers for 50 Hz and 400 Hz output inverters are obtained in the following manner:

A. Units 125VA or larger — Take the equivalent 60 Hz model (25 60 -24) and insert the number 50 or 400 in the space where the 60 appears. Therefore a typical model designation for 50 Hz is 25 50 -24 and for 400 Hz is 25 400 -24.

B. Units 60VA and smaller — Take the equivalent 60 Hz model (60 6 -24) and insert the number 4 in the space where the 6 appears. Therefore a typical model designation for 400 Hz is 60 4 -24.

Weights on 50 Hz inverters are approximately the same as the 60 Hz units; the 400 Hz inverters weigh about 25% less. Dimensions essentially remain the same. Pricing for 50 Hz and 400 Hz inverters — add 10% to the 60 Hz price.

* These units are available with 400 Hz output only, at prices indicated.

MINITRON™ INVERTERS

The Minitron™ series of low cost DC/AC inverters are available in power ratings of 30, 60 and 120 VA for 400, 50 and 60 Hz operation. They feature light weight, an hermetically sealed enclosure and they are fully repairable. Minitrons comply with MIL requirements for shock, vibration, humidity and altitude.

SPECIFICATIONS

OUTPUT

Voltage .... 117 VAC
Regulation .... ±1% for line or load
Remote voltage adjust. range ±10% of nominal
Frequency regulation ±0.15% for line or load
Frequency temp. coefficient .... ±0.01%/°C
Remote frequency adjustment ±5% of nominal
Maximum distortion 6%
Operating temp. range .... −20°C to +50°C
Typical efficiency .... 50%-70% depending on input voltage and power

CIRCUIT PROTECTION

Output is automatic current limited.
Short circuit protected.
Overtemperature output (automatic reset).
Slow-start-overshoot less than 5%.
Input transient protection per MIL-STD-704 (80 VDC for 0.1 sec.) (for 24V units only) for other input voltages consult factory.
Environment — meets the environmental requirements of MIL-STD-810B and MIL-E-5400.

UNINTERRUPTIBLE POWER SYSTEMS

Total System Responsibility!

***EMERGENCY *NO BREAK *STAND BY**

- *Nova offers complete uninterruptible power systems (UPS), designed, manufactured and warranteed by one company
- *Complete system with battery housed in one cabinet or rack
- *One cabinet — one easy installation

INPUT

Voltage: 117V ±15% 1ϕ (other voltages and phases available).
Frequency: 60 Hz ±5% (other frequencies available).

OUTPUT

Voltage: 117V, 60 Hz, 1ϕ (other voltages and phases available).
Adjustable Range: Voltage ±10%.
Frequency: ±5%.
Voltage Regulation: ±1% no load to full load.
Frequency Regulation: ±0.15% no load to full load.
Recovery Time: Less than 50 milliseconds for 100% load change.
Distortion: Less than 6%.
Power Factor Range: 0.7 lead to 0.7 lag.
Frequency Temperature Coefficient: 0.01% per °C.
Overload Capability: 130% of rating for 5 min. (at reduced tolerances).

FEATURES

AC Ammeter and Voltmeter.
Automatic Transfer Relay Switch: Transfers critical load to utility in the event of system failure.
Cooling: Natural convection, no fans or external heat sinks.
Temperature: −20°C to 50°C, except battery rated @ 25°C.
Recharge Time: 8 hours.
Battery Protection Time: 15 minutes.

CIRCUIT PROTECTION

Input Circuit Breaker.
Short Circuit Protection.
Output Automatic Current Limited.
Internal Over Temperature Protection.
Input, Battery and Output: Electrically isolated. Contacts for remote power switching.

OPTIONAL FEATURES AND ACCESSORIES

Static Transfer Switch.
Emergency Mode, Indicator Lamp and Alarm Contacts: Activated when emergency battery is in use.
System Monitor, Indicator Lamp and Alarm Contacts: Indicates failure of system.
Exerciser for Automatic Transfer Relay Switch: For testing of relay switch.
High Precision Frequency: ±0.005%.
Synchronizing Circuit: Syncs inverter output to that of an external signal.
Manual By-Pass (break-before-make): To remove system from service for maintenance.
Additional Meters: AC or DC volt ammeters.
Additional Back-up protection time.
Consult Factory for Special Requirements or Options Not Listed.

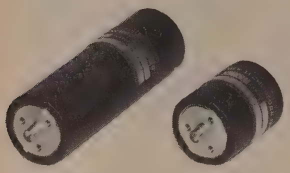
LASER POWER SUPPLIES & DIODE PULSERS
DC MOTOR SPEED CONTROLS

ILC



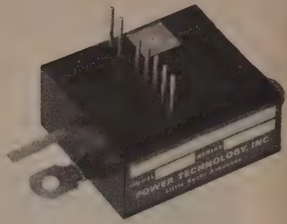
ILC LASER DIODE PULSERS

Suitable for driving laser diodes at pulse widths of 10 to 200NS. Models available for pulse currents of 2 through 100 amps. Very fast rise and fall time with low power consumption. Internal power supply and clock available. Pulse rates to 500,000 PPS.

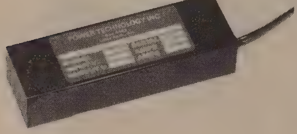
IL LASER DIODE PULSERS

Low-cost general purpose pulsers for pulse widths of 50 to 300NS. Models available for pulse currents of 10 to 100 amps. Internal power supply for operation from 6 to 28V source. Internal clock for pulse rates of 1 to 10,000 PPS. Long pulse version available for LED'S.

IL



L23



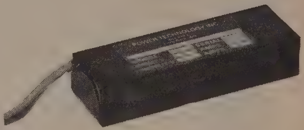
L23 HELIUM NEON LASER POWER SUPPLY

Very compact, highly efficient module for portable lasers from 10 to 17V DC input. For applications requiring long battery life, excellent current regulation and cool operation. 6 and 24V versions available.

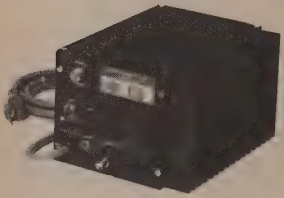
BR6B

Converter for operating L23 from 115/230V AC 50-400HZ power while retaining the 12V operating feature. Measures only 15/16 x 1 7/16 x 4 1/2''.

BR6B



L30



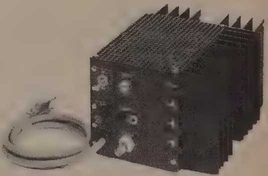
L30, CO, CO^2, AND METAL VAPOR LASER POWER SUPPLY

Low ripple, well regulated; 50 to 300 watt models available. Operates from 117V AC 50-400HZ.

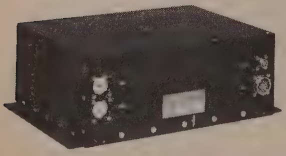
L12-13 METAL VAPOR LASER POWER SUPPLY

Light weight, high efficiency for Helium Cadmium Laser. 150 and 200 watt models for operation from 117V AC 50-400HZ. Rack mount and modular versions available.

L12-13



L22



L18-L22 CO^2 LASER POWER SUPPLY

Light weight, compact, high efficiency power supplies for CO^2 Lasers requiring 300 to 1500 watts input. Liquid cooled and air cooled versions.

M21-M33 MOTOR SPEED CONTROL

High efficiency DC motor speed controls for 12V and 24V battery operation with full load current of 15 to 90 amps. Joystick control available for two-axis control.

Oval cell also available (Fig. C) in 4000 mAH, W-2.080, T-1.260 and H-1.656. Wt. 0.37 oz.

All battery configurations available with pressure contact buttons or solder lug terminals.

All cylindrical and oval battery types feature a pressure safety device for security and reliability making them especially suited for cordless consumer and electronic products.

CUSTOM BATTERY PACKS

Cylindrical cells are incased in a rigid, high impact case. Case materials are highly dielectric to provide maximum cell insulation at minimum cost. The case is vented to each cell to provide cooling and long life. Packs are available to your specifications in any voltage.

FIG. C

ALSO MARKETS:

- Emergency lighting units.
- Flashlight and lantern rechargeable batteries.
- Custom and prototype design battery packs built to your specifications.
- Battery chargers for all types of batteries.
- Batteries - **NICKLE CADMIUM - SILVER CADMIUM - SILVER ZINC - MERCURY - SEALED LEAD-ACID.**

Button cell batteries are constructed of sealed nickle cadmium button cells (see fig. B) to meet almost any application requirement. The compact size of button cells permits easy stacking to form multiple cell batteries of optimum power/volume ratio and space utilization. Completely sealed button cells are ideally suited for portable radios, flashlights, photoflash, alarms, and any low-drain, high capacity application.

TYPICAL BUTTON CELL BATTERIES

INVESTIGATE direct current emergency power sources available in any regulated voltage or current, featuring automatic SCR solid state switchover to a self-contained battery. We have the answer to reliable economical D.C. power with automatic emergency back-up.

ECONO/MATE II POWER SUPPLIES

NEW ECONO/MATE II — SUPERIOR PERFORMANCE OPEN FRAME MODULE POWER SUPPLIES

OUTSTANDING FEATURES

- Remote sensing
- Adjustable current limiting
- Vacuum impregnated Mil-T-27 Transformers
- 100,000 MTBF per Mil Handbook 217
- Computer-Aided-Design
- Computer Grade Components
- Dual AC inputs
- Integrated Circuit Regulation
- Guaranteed performance
- Off-the-shelf delivery

PRODUCT DIGEST

The Power/Mate Econo/Mate II power supplies are superior performance modules which provide ultra reliable performance at low cost. Power/Mate has been able to achieve these high performance qualities through the use of our "PWR-CHK" design program. This concept insures not only 100,000 hour MTBF but also continuous full life high performance to full rated specifications under worst case conditions.

Our Econo/Mate II designs are complete with remote sensing, adjustable self resting current limiting, dual AC inputs, built in short-circuit protection, vacuum impregnated transformers and the highest quality capacitors. Our modern computer control production facilities utilize the latest production techniques, thus allowing Power/Mate to pass along savings to you the customer without sacrificing quality or reliability. The Econo/Mate II open frame modules are particularly appropriate for use in today's modern application.

In addition, overvoltage protection is available for even further protection for each Econo/Mate unit.

Every "EM Series" power supply is thoroughly tested and backed by Power/Mate's enviable record of technical excellence.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

NOBODY KNOWS MORE

ABOUT POWER SUPPLIES THAN POWER/MATE BECAUSE . . . WE HAVE THE WORLD'S MOST COMPLETE MANUFACTURING PLANT DEVOTED EXCLUSIVELY TO POWER SUPPLIES.

A small portion of one of the assembly areas at the Power/Mate plant. Production lines are laid out by our manufacturing engineers for the rapid and efficient assembly of our one and only product . . . POWER SUPPLIES. We know our business. It can save you time and money.

Our skilled assemblers, through training and experience . . . know what it takes and most important, know what it means to produce a quality product.

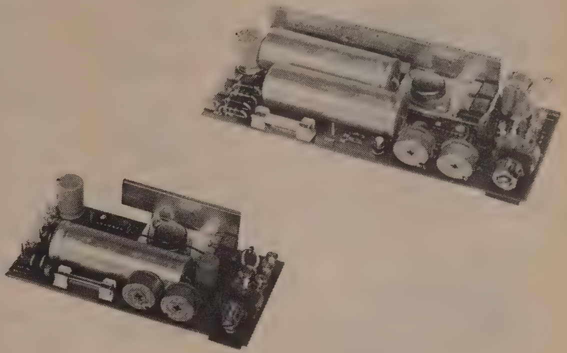
SMS SUBMODULAR POWER SUPPLIES

OUTSTANDING FEATURES

- Separate modular components
- Multiple or single outputs
- Built-in overvoltage protection
- Includes filter, regulators and rectifiers
- Fully adjustable current limiting
- Wide range voltage adjustment
- Special inhibit function for turn on/off
- Remote sensing and remote programming
- Computer grade capacitors
- Same-day-shipment



PRODUCT DIGEST

Power/Mate's innovative power supply technology has created new circuit designs which offer improved power supply performance via Power/Mate's new SUBMODULAR power supply System approach.

Whether you decide to build or to buy your own power supplies, Power/Mate's innovative features give you single, dual or multiple outputs and provide you with everything needed for the best power supply possible. Our SUBMODULAR System units contain all the electronics for rectifying, filtering, regulating and circuit protection. Everything you need for virtually any power supply application is built in to Power/Mate's SUBMODULAR System.

You need only select the necessary transformer and heat sinks. Then merely connect the SUBMODULAR System to the appropriate transformer taps and bind down and secure the unit to its heat sink. Couldn't be simpler and obviously, manufacturing labor is almost extinct.

Power/Mate's SUBMODULAR power supply System concept provides the greatest design and application versatility ever realized and certainly more significant than is obtainable through either monolithic or hybrid approaches.

With Power/Mate's SUBMODULAR power supply System, an almost unlimited variety of configurations which can accommodate the most sophisticated power supply requirements have now been reduced to simply a SUBMODULAR System unit, a transformer and a heat sink.

SPECIFICATIONS

DC OUTPUT VOLTAGES AND CURRENTS: See respective tables.

REGULATION (ALL DC OUTPUTS): Line . . . ±.075% for load variations from 0 to full load.

RIPPLE: Less than 1mV RMS, 3mV Pk to Pk typical.

INPUT CHARACTERISTICS: Requires low level AC input; Derate output current 15% for operations at 50 Hz.

LOGIC INHIBIT FUNCTION: A low-level signal between 1V and 50V will inhibit the DC output. May be used for control, sequencing or maintenance.

OVERLOAD PROTECTION: Fully adjustable foldback type current limiting is standard. "Constant current" overload protection available for use with constant current loads (consult factory).

OVERVOLTAGE PROTECTION: SCR crowbar type. Trigger level fully adjustable.

REMOTE SENSE: Standard on Models B through F.

TEMPERATURE RATING, STORAGE: −55°C to +85°C.

TEMPERATURE RATING, OPERATING: 0°C to +40°C full load, derated to +71°C. Percent of full-rated load at ambient temperature: +40°C/100%, +50°C/75%, +60°C/50%, +71°C/35%.

TEMPERATURE COEFFICIENT: ±.007%/°C typical.

TRANSIENT RESPONSE: 50 sec for a 50% load change.

STABILITY: ±0.1% for 8 hours after warm-up.

INPUT PROTECTION: Input fusing standard.

SH HEATSINKS

The SMS Series high efficiency SH Heatsinks are used to allow "stand alone" operation at full ratings of each SUBMODULE. All SH Heatsinks are compatible with and can be mounted in virtually any 5¼" rack mounting chassis.

Model	Used With SMS SUBMODULE	Cooling	Price
SH-A	Series A	Convection*	$ 6
SH-B	Series B	Convection*	8
SH-C	Series C	Convection*	10
SH-D	Series D	Convection*	15
SH-E	Series E	Convection* Forced Air 200 FPM	20
SH-F	Series F	Forced Air 1000 FPM	25

*Moving air is recommended when mounting in confined area.

TH Thermostats are used with SMS Series SUBMODULES to prevent the possibility of overtemperature damage. Also, in conjunction with the Logic Inhibit Function, these devices can inhibit operation when an overtemperature condition is reached.

Part Number	Contacts	Opening Temperature +5°C	Price
TH-70	Normally Closed	+70°C	$6
TH-80	Normally Closed	+80°C	6
TH-90	Normally Closed	+90°C	6
TH-100	Normally Closed	+100°C	6

ST TRANSFORMERS

The SM Series multiple tapped "ST" transformers are designed for use with the SMS Series SUBMODULES. A separate ST Transformer is required for each SUBMODULE used.

Model	Used With SMS SUBMODULE	Weight	Size H x W x D	Price
ST-A	Series A	1.0	2.0 x 3.3 x 2.2	$20
ST-B	Series B	3.0	3.4 x 3.0 x 2.8	25
ST-C	Series C	5.5	3.8 x 3.3 x 4.0	30
ST-D	Series D	8.6	4.5 x 3.8 x 4.0	40
ST-E	Series E	11.0	4.5 x 3.8 x 4.8	45
ST-F	Series F	22	4.5 x 5.5 x 6.0	50

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

THE POWER/MATE MANAGEMENT COMMITMENT TO QUALITY IS TOTAL.

POWER/MATE MEANS PEOPLE

IT Also Takes Dedication, Guts, and Backbone . . . .

That's because there is no compromise or rationalization when it comes to to shipping out a quality product. Your power supply has to meet our published standards of Workmanship and Performance or it doesn't ship.

Sometimes that hurts . . . .

But we at Power/Mate like to think we have a backbone.

When you receive a Power/Mate power supply, you know we do.

SUPER/UNI UNIVERSAL POWER SUPPLIES

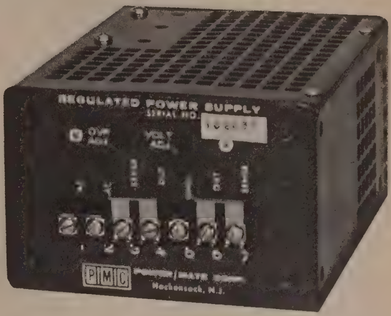
PRODUCT DIGEST

Power/Mate's new SUPER/UNI Series of variable rated modular power supplies represent a major advance in power supply technology. Through Power/Mate's unique design techniques, the SUPER/UNI Series offer all the inherent advantages of Power/Mate's field proven original UNI Series while simultaneously achieving significant power density and high efficiency advantages.

The new SUPER/UNI Series offers optimum rated DC outputs between 0-30 VDC with output currents up to 36 amps. In addition, the SUPER/UNI Series exhibit excellent performance characteristics, high efficiencies and 100,000 hr. MTBF.

All models are designed to meet MIL Spec environment requirements. Also, the SUPER/UNI Series are short-circuit proof, contain built-in over-voltage protection and are designed for efficient operation up to 71°C without the need for external cooling.

All models are UL recognized and carry a full 5-year Warrantee.



REGULATION: SUPER/UNI-76V and SUPER/UNI-88V better than ±0.005% + 1MV for line and load. All other units better than ±0.05% + 1MV for line and load.
RIPPLE: Less than 250 microvolts.

SPECIFICATIONS

INPUT: 105-125V, 47-420 CPS.

OUTPUT VOLTAGE: 0-30 volts for all units.

OUTPUT VOLTAGE RANGE: Set in overlapping ranges by means of internal quick disconnect taps.

OUTPUT CURRENT: See chart on following page.

REGULATION: SUPER/UNI-76V and SUPER/UNI-88V better than ±0.005% +1MV for line and load. All other units better than ±0.05% +1MV for line and load.

RIPPLE: Less than 250 microvolts.

RESPONSE TIME: Less than 50 microseconds.

TEMPERATURE COEFFICIENT: Better than 0.02%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

OVERLOAD & SHORT CIRCUIT PROTECTION: Solid state short circuit and overload protected. Instantaneous recovery, and automatic reset. Unit cannot be damaged by prolonged short circuits or overloads.

POLARITY: May be either positive, negative or floating up to 300 volts.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20°C to +71°C ambient.

STORAGE TEMPERATURE: −55°C to +85°C.

OUTPUT CURRENT vs. TEMPERATURE: Unit is rated for full current output at temperatures between −20°C and +45°C and is linearly derated from +45°C to 70% of the full output at +71°C.

REMOTE-LOCAL SENSING: Provision is included to permit remote sensing of the output voltage directly at the load for improved over-all regulation. Unit may be connected for local sensing if desired.

REMOTE-LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted, or internally adjusted with course and fine controls. Both are accessible through holes in the terminal end of the supply.

MECHANICAL DATA

The SUPER/UNI power supplies may be mounted on any of three surfaces (except EE case which mounts only on bottom or side). Units will function when mounted in any position. 3½-inch and 5¼-inch rack mounting assemblies are available, along with other accessories. See pages 41-44

SAME-DAY-SHIPMENT

You can be sure that POWER/MATE CORP. will ship any of its UNI series power supplies to you the same day that your order arrives in our offices.

UL APPROVED

POWER/MATE's power supplies are listed as a recognized component in Underwriter Laboratory's recognized component index. (UL 478-1967).

5-YEAR WARRANTY

5 Year Warranty

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

qual•i•ty \ˈkwäl-ət-ē\ *n*, a degree of excellence, a distinguishing attribute, superiority in kind.

The word QUALITY

Is one of the more mis-applied and insincerely used words in industry today . . .

That's too bad, because it's a word, when properly used, that has a lot of importance to **you** and **your** product.

We at Power/Mate, take the word at face value. We don't rationalize about a product failure. Failures are inexcusable.

At Power/Mate . . . We take Action ! ! . . . .

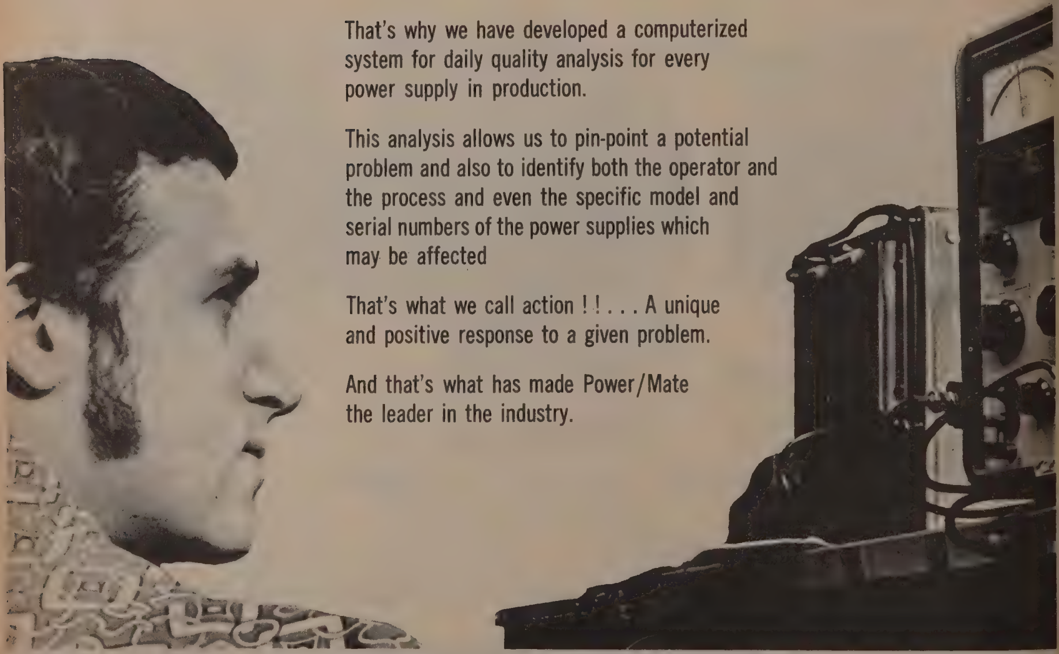
Thats why we thermally cycle and burn-in all power supplies a minimum of 24 hours before shipment to you.

That's why we have developed a computerized system for daily quality analysis for every power supply in production.

This analysis allows us to pin-point a potential problem and also to identify both the operator and the process and even the specific model and serial numbers of the power supplies which may be affected

That's what we call action ! ! . . . A unique and positive response to a given problem.

And that's what has made Power/Mate the leader in the industry.



PMC POWER/MATE CORP.

PM MODULAR POWER SUPPLIES

PRODUCT DIGEST

PM Series of regulated power supplies are a 1 for 1 replacement for other manufacturers older model power supplies. Package for package power supplies are identical but the similiarity ceases there.

The Power/Mates' PM Series systems power supply design is modern and uses only the latest state-of-the-art integrated circuits and hybrids of the seventies.

The new PM Series are available to OEM users with liberal quantity discounts. Thus, the PM Series provides a high quality, power supply that saves space, weight and money. And offers a superior alternative to five year old, old fashioned power supply designs.

One of the PM Series space-saving features is a built-in over-voltage protection that doesn't add a fraction to the basic module dimensions. Over-voltage protection is inside the module case and is standard on most models.

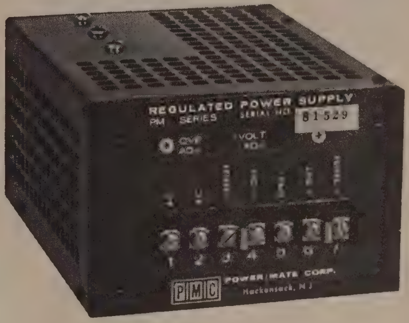
Self-restoring current limiting and built-in circuit protection limit the maximum output available on external loads. In addition a 'fail-safe' thermal device offers even further protection for each PM unit.

The PM Series are available with the same wide variety of options as the other Power/Mate systems power supplies. Typical available options are fungus proofing with MIL-173 varnish, wide input AC ranges and rack accessories.

As with all Power/Mate power supplies, the new PM Series is backed by Power/Mate's Five Year Warranty.

UL APPROVED

POWER/MATE's power supplies are listed as a recognized component in Underwriter Laboratory's recognized component index. (UL 478-1967).



REGULATION (ALL DC OUTPUTS): Line . . . ± 0.015% + 1mV for line variations from 105-132 VAC. Load . . . ± 0.015% + 1mV for load variations from 0 to full load.

RIPPLE: Less than 1mV RMS.

SPECIFICATIONS

AC INPUT: 105-132 Vac, 47-440 Hz.

DC OUTPUT VOLTAGES AND CURRENTS: See respective tables.

REGULATION (ALL DC OUTPUTS): Line . . . ± 0.015% + 1mV for line variations from 105-132 VAC. Load . . . ± 0.015% + 1mV for load variations from 0 to full load.

RIPPLE: Less than 1mV RMS.

RESPONSE TIME: Less than 20 micro-seconds.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

REMOTE OR LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted or internally adjusted.

POLARITY: May be either positive, negative or floating up to 300 volts.

TEMPERATURE COEFFICIENT: Better than 0.01%°C.

LONG TERM STABILITY: Better than 0.01%°C.

AMBIENT OPERATING TEMPERATURE: Continuous duty from — 20°C to + 71°C.

STORAGE TEMPERATURE: −55°C to +85°C.

OVERSHOOT: No voltage spikes for turn on-turn off or power failure.

OVERLOAD AND SHORT CIRCUIT PROTECTION: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short circuits or overloads.

MIL SPECS: Designed to meet the environmental requirements of MIL-E-5272 and RFI requirements of MIL-1-6181. Meantime between failures — in excess of 100,000 hours per MIL HDBK 217.

TRANSFORMERS: Meets MIL-T-27 specs.

INPUT AND OUTPUT CONNECTIONS: Heavy duty terminal blocks.

MECHANICAL DATA

The PM power supplies may be mounted on any of three surfaces (except EE case which mounts only on bottom or side). Units will function when mounted in any position, 3½-inch and 5¼-inch rack mounting assemblies are available, along with other accessories.

AVAILABLE OPTIONS

1. Fungus proofing, with MIL-V-173 varnish, for all fungus nutrient components, at $10 per unit. Use suffix "F".
2. AC input. For 205-265 VAC, 47-420 Hz operation, specify "LJ" option and add $10.00 to price.

PM FULL RACK POWER SUPPLIES

PRODUCT DIGEST

POWER/MATE'S expanded PM Series, an extension of our field proven PM Series Systems Power Supply Modules, now make available "Full Rack" power supplies with voltages up to 150 VDC and currents up to 150 amperes. The expanded PM Series are offered in three additional package sizes (F, G and H case), all of which set into standard 19" racks. The expanded series are ideally suited for use with digital (TTL, ECL, TRL, DTL and HTL) integrated circuits and the new MOS/LSI logic.

The PM Full Rack power supplies are offered in 42 fixed voltage range models and 4 wide range models in metered or nonmetered versions. Built-in over-voltage protection on all PM Series "H" package models is standard. Self-restoring current limiting and over-voltage protection provide complete protection. Advanced electronic circuitry limits the output current on external loads, including short circuit providing protection for the load as well as the power supply. Remote sensing, remote programming and complete serviceability are additional features.

The Full Rack PM Series offer the same wide variety of options as the systems PM power supplies. Typical available options are fungus proofing with MIL-V-173 varnish, metering, dual AC inputs, high performance option, OVP and dual primaries.

As with all Power/Mate power supplies, the Full Rack PM Series are backed by Power/Mate's Five Year Warranty.

REGULATED POWER SUPPLY

REGULATED POWER SUPPLY

REGULATED VOLTAGE:
Line—0.05% +4mV for line variations from 105-132 VAC.
0.01% +1.0mV for line variations from 105-132 VAC. (optional)*
Load—0.03% +3mV for load variations from 0 to full load.
0.02% +2mV for load variations from 0 to full load. (optional)*
RIPPLE: .5mV RMS with either positive or negative terminal grounded.

SPECIFICATIONS

AC INPUT: 105-132 VAC, 47-420 Hz.

OUTPUT VOLTAGE AND CURRENT: See respective tables.

REGULATED VOLTAGE:
Line—0.05% +4mV for line variations from 105-132 VAC.
0.01% +1.0mV for line variations from 105-132 VAC. (optional)*
Load—0.03% +3mV for load variations from 0 to full load.
0.02% +2mV for load variations from 0 to full load. (optional)*

RIPPLE: .5mV RMS with either positive or negative terminal grounded.

METERS: Voltmeter and ammeter, rated accurate to 2% of full scale value, are provided on the front panel. See options.

POLARITY: The output may be "floated" up to 300V peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

FINISH: Front panel is finished with dual tone gray and black baked enamel with brushed aluminum handles. Panel marking is gray. All other finishes are appropriate paint, plating, or chemical film, as required.

TEMPERATURE COEFFICIENT: Better than 0.01%°C.

LONG TERM STABLITY: Better than 0.025% for 8 hours.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

REMOTE OR LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted or internally adjusted with course and fine control.

OVERLOAD AND SHORT CIRCUIT PROTECTION: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short circuits or overloads.
Thermal—Thermostat; automatic rest when overtemperature condition is eliminated.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20°C to +71°C ambient.

STORAGE TEMPERATURE: −55°C to +85°C.

INPUT AND OUTPUT CONNECTIONS: Heavy duty terminal block on rear of chassis.

*See Options.

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

MIL/SPEC PERFORMANCE

Independently tested to meet the environment of MIL-E-5272 and related specs. See MIL SPEC Section of this catalog.

PM FULL RACK POWER SUPPLIES

AVAILABLE OPTIONS

METERS: Prices of "F" and "G" packages are for non-metered models. For metered models add suffix "M" to model number and $30 to price.
Package "H" models are available only with overvoltage protection, high performance option, and meters, all of which are included in the price.

OVERVOLTAGE PROTECTION: Built-in overvoltage protection is standard on all package "H" models and available as an option on all package "F" and "G" models. To order OVP for "F" and "G" packages, add suffix "OV" to the model number and add $50 to price. Price of package "H" models includes overvoltage protection.

CHASSIS SLIDES: "F", "G" and "H" packages are available with mounted chassis slides. Add suffix "CS" to model number, and add $50 to the price of "F" and "G" models, $89 to the price of "H" models.

HIGH PERFORMANCE: Better regulation, ripple, and temperature coefficient for extra performance and safety margin in your system.

All package "F" and "G" units are available with the following high performance specifications at a $15 surcharge.

Load Regulation: .02% +2mV.
Line Regulation: .01% +1dV.
Ripple and Noise: with 60 Hz input: 0.5mV RMS; 1.5mV p-To-p.
Temperature Coeff; .01%°C.

Add suffix "Y" to package "F" and "G" model numbers. High performance option standard on "H" case units.

AC INPUT: All models are available with 205-265 VAC input voltage. Add suffix "LJ" to model number (40°C rating not applicable) and add $10 to cost.

FUNGUS PROOFING: All models available with fungus proofing with MIL-V-173 varnish for all fungi Nutrient components. To order add suffix "FP" to model number and add $15 to the price of "F", "G" and "H" package models.

"F" PACKAGE

3-1/2" x 19" x 16-1/2"

PX MODULAR POWER SUPPLIES

PRODUCT DIGEST

Power/Mates new PX Series power supplies consist of 90 different models in 6 convection cooled package sizes. The PX Series utilizes state-of-the-art Integrated Circuit regulators and high efficiency internal heat dissipating devices to achieve their compact size and high reliability.

The PX Series are ideally suited for IC Logic and Systems applications. The new models provide DC outputs to 3.6VDC to 150VDC with currents to 40 amps. Most models contain built-in overvoltage protection. All PX Series power supplies are short circuit and overload protected. In addition, all models contain built-in "fail-safe" thermal protection devices.

Power/Mates' unique PX Series power supplies offer the same wide variety of options as other Power/Mate systems power supplies. Typical available options are fungus proofing with MIL-173 varnish, wide input AC ranges, and standard Power/Mate racks and accessories.

The PX Series power supplies are also a direct form-fit-function replacement for LXS, RS and other manufacturers older model units.

As with all Power/Mate power supplies, the new PX Series is backed by Power Mate's Five Year Warranty.

UL APPROVED

POWER/MATE's power supplies are listed as a recognized component in Underwriter Laboratory's recognized component index. (UL 478-1967).

REGULATION (ALL DC OUTPUTS): Line 0.1% — Load 0.1%.

NOISE AND RIPPLE: 1.5mv RMS, 5mv PK-PK with pos. or neg. grounded.

SPECIFICATIONS

AC INPUT: 105-132 Vac, 47-440 Hz.

DC OUTPUT VOLTAGES AND CURRENTS: See respective tables.

REGULATION (ALL DC OUTPUTS): Line 0.1% — Load 0.1%.

NOISE AND RIPPLE: 1.5mv RMS, 5mv PK-PK with pos. or neg. grounded.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

REMOTE OR LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted or internally adjusted.

POLARITY: May be either positive, negative or floating up to 300 volts.

DC OUTPUT CONTROL: Simple screwdriver voltage adjustment.

AMBIENT OPERATING TEMPERATURE: Continuous duty from 0°C to +71°C.

STORAGE TEMPERATURE: −55°C to +85°C.

OVERLOAD AND SHORT CIRCUIT PROTECTION: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short circuits or overloads.

OVERSHOOT: No voltage spikes for turn on-turn off or power failure.

TRANSFORMERS: Meets MIL-T-27 specs.

MIL SPECS: Designed to meet the environmental requirements of MIL-E-5272 and RFI requirements of MIL-I-6181. Meantime between failures — in excess of 100,000 hours per MIL HDBK 217.

INPUT AND OUTPUT CONNECTIONS: Heavy duty terminal blocks or rear of module.

MECHANICAL DATA

The PX power supplies may be mounted on any of three surfaces (except EE case which mounts only on bottom or side). Units will function when mounted in any position, 3½-inch and 5¼-inch rack mounting assemblies are available, along with other accessories.

AVAILABLE OPTIONS

1. Fungus proofing, with MIL-V-173 varnish, for all fungus nutrient components, at $10 per unit. Use suffix "F".
2. AC input. For 205-265 VAC, 47-420 Hz operation, specify "LJ" option and add $10.00 to price.

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

PX FULL RACK POWER SUPPLIES

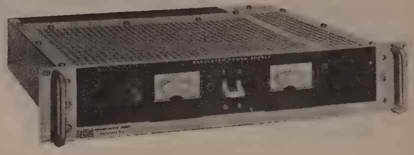
PRODUCT DIGEST

Power/Mate's "PX Series" full rack power supplies are offered in over 40 fixed voltage models and 4 wide range models are ideally suited for use with any digital IC system or with MOS/LSI logic. All models are designed to set into standard 19" racks.

Built-in over-voltage protection is standard on all full rack PX Series "H" package models. Self-restoring current limiting and over-voltage protection provide complete protection. Advanced electronic circuitry limits the output current on external loads, including short circuit protection for the load as well as the power supply. Remote sensing, remote programming and complete serviceability are additional features.

The Full Rack PX Series offer the same wide variety of options as the systems OEM power supplies. Typical available options are fungus proofing with MIL-V-173 varnish, metering, dual AC inputs, high performance option, OVP and dual primaries.

As with all Power/Mate power supplies, the Full Rack PX Series are backed by Power/Mate's Five Year Warranty.



REGULATED VOLTAGE:
Line— 0.015% + 1mV for line variations from 105-132 VAC.
Load— 0.015% + 1mV for load variations from 0 to full load.

RIPPLE: Less than .5mV RMS with either positive or negative terminal grounded.

SPECIFICATIONS

AC INPUT: 105-132 VAC, 47-420 HZ.

OUTPUT VOLTAGE AND CURRENT: See respective tables.

REGULATED VOLTAGE:
Line—0.1% +1MV for line variations from 105-132 VAC.
Load—0.1% +1MV for load variations from 0 to full load.

RIPPLE: .5mV RMS with either positive or negative terminal grounded.

METERS: Voltmeter and ammeter, rated accurate to 2% of full scale value, are provided on the front panel. See options.

POLARITY: The output may be "floated" up to 300V peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

FINISH: Front panel is finished with dual tone gray and black baked enamel with brushed aluminum handles. Panel marking is gray. All other finishes are appropriate paint, plating, or chemical film, as required.

TEMPERATURE COEFFICIENT: Better than 0.01%°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

MECHANICAL DATA

REMOTE OR LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted or internally adjusted with coarse and fine control.

OVERLOAD AND SHORT CIRCUIT PROTECTION: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short circuits or overloads.
Thermal—Thermostat; automatic reset when overtemperature condition is eliminated.

AMBIENT OPERATING TEMPERATURE: Continuous duty from —20°C to +71°C ambient.

STORAGE TEMPERATURE: —55°C to +85°C.

INPUT AND OUTPUT CONNECTIONS: Heavy duty terminal block on rear of chassis.

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

MIL/SPEC PERFORMANCE

Independently tested to meet the environment of MIL-E-5272 and related specs. See MIL SPEC Section of this catalog.

PX FULL RACK POWER SUPPLIES

AVAILABLE OPTIONS

METERS: Prices of "F" and "G" packages are for non-metered models. For metered models add suffix "M" to model number and $30 to price.

Package "H" models are available only with overvoltage protection, high performance option, and meters, all of which are included in the price.

OVERVOLTAGE PROTECTION: Built-in overvoltage protection is standard on all package "H" models and available as an option on all package "F" and "G" models. To order OVP for "F" and "G" packages, add suffix "OV" to the model number and add $50 to price. Price of package "N" models includes overvoltage protection.

CHASSIS SLIDES: "F", "G" and "H" packages are available with mounted chassis slides. Add suffix "CS" to model number, and add $50 to the price of "F" and "G" models, $89 to the price of "H" models.

AC INPUT: All models are available with 205-265 VAC input voltage. Add suffix "LJ" to model number. (40°C rating not applicable) and add $10 to price.

FUNGUS PROOFING: All models available with fungus proofing with MIL-173 varnish for all fungi Nutrient components. To order add suffix "FP" to model number and add $15 to the price of "F", "G" and "H" package models.

"F" PACKAGE

FPS FERRORESONANT POWER SUPPLIES

PRODUCT DIGEST

FPS Power Supplies use PMC's uniquely designed "MAG-POWER" ferroresonant power transformer to provide simple, efficient and economical operation. They deliver more power-per-penny than conventional units. FPS Series units supply DC outputs from 5 to 60 volts with currents to 75 amps. The inherent simplicity of design of these supplies greatly increases the reliability. All components are conservatively rated to further assure optimum performance.

Efficiency is high, in the area of 70-90%. Typical reliability is more than 150,000 hours MTBF. Quality features include built-in limiting for over-voltage and over-current, short circuit protection, and all-silicon semiconductors.

The FPS units, which operate in series or parallel, may be used with many of the standard POWER/MATE racks and metered accessories. This makes the FPS Series compatible with all other PMC supplies to produce a uniquely tailored power supply system to suit your demands.

REGULATION LINE: ±1%, for ±15 volt AC line variation, at 25-100% load. For loads below 25%, line regulation is ±1.5% output change.

REGULATION LOAD: See charts.

SPECIFICATIONS

INPUT: 115 VAC ±15 VAC, 60 Hz ±5% single phase. Input frequency variations produces an approximate equal percentage output voltage change.

OUTPUT VOLTAGE: See charts.

OUTPUT IMPEDANCE: 1 kHz-10 kHz: 0.05 ohms, 10 kHz-100 kHz: 0.05 ohms +0.5 microhenries.

ACCURACY: ±2%, measured at 115 VAC, full load, 30°C. Initial cold output is 1% higher.

REGULATION LINE: ±1%, for ±15 volt AC line variation, at 25-100% load. For loads below 25%, line regulation is ±1.5% output change.

REGULATION LOAD: See charts.

STABILITY (8 hr.): 1% or 0.1V, whichever is greater.

TEMPERATURE COEFFICIENT: 0.05%/C°.

AMBIENT OPERATING TEMPERATURE: −20°C to +55°C.

STORAGE TEMPERATURE: −40°C to +85°C.

COOLING: Convection.

TRANSIENT RESPONSE: (50-100% current) 50 milliseconds.

OVERLOAD PROTECTION: Current limiting transformer restricts short circuit current to safe value.

ISOLATION VOLTAGE: 600 volts to chassis.

SERIES/PARALLEL OPERATION: Identical models, can be paralleled for approximately double current (allow for 10% imbalance). Series operation to rated isolation.

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

MIL/SPEC PERFORMANCE

Independently tested to meet the environment of MIL-E-5272 and related specs. See MIL SPEC Section of this catalog.

HV/HW HIGH EFFICIENCY POWER SUPPLIES

PRODUCT DIGEST

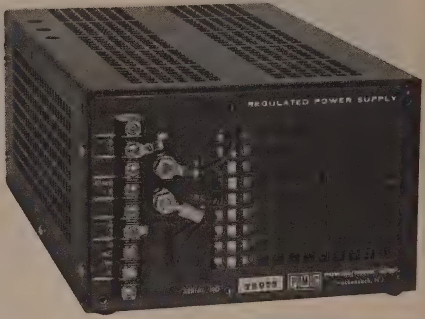
Power/Mate's new HV/HW High Efficiency Power Supply Series, utilizes Power/Mate's "SIMAG" circutry (patent pending), a breakthrough in power supply design and is the result of a development program to provide high efficiency power supplies for use with digital (TTL, ECL, TRL, DTL, and HTL) integrated circuits and MOS/LSI logic.

The new HV/HW series operates at efficiencies greater than 50% and are offered in a wide range of voltages up to 150 VDC with current ratings up to 200 amps.

Power/Mate's unique mechanical and electrical design allows the power supplies to be packaged in almost half the space required for equivalent conventional series power supplies.

Built-in overvoltage protection and self-restoring current limiting provide complete protection. Advanced electronic circuitry limits the output current on external loads, including short circuit providing protection for the load as well as the power supply. Remote sensing, remote programming and complete serviceability are additional features.

The HV/HW Series are backed by Power/Mate's Five Year Warranty.



LINE REGULATION: ±0.1% 10 mv for line variations from 105-132 VAC.
LOAD REGULATION: ±0.1% 10 mv from no load to full load.
RIPPLE: 10 mv RMS MAX.

HV SERIES SPECIFICATIONS

INPUT VOLTAGE: 105-132 VAC, 57-63 HZ.
OUTPUT VOLTAGE: Refer to applicable charts.
LINE REGULATION: ±0.1% + 10 mv for line variations from 105-132 VAC.
LOAD REGULATION: ±0.1% + 10 mv from no load to full load.
RIPPLE: 10 mv RMS MAX.
TEMPERATURE COEFFICIENT: .015% + 0:5 mv/°C.
EFFICIENCY: Greater than 50%.
OPERATING AMBIENT TEMPERATURE: 0-71°C.
STORAGE TEMPERATURE: —55°C to +85°C.
REMOTE OR LOCAL SENSING: Provision included for remote sensing of the DC output voltage directly at the load.
OVERLOAD PROTECTION: Both thermal and adjustable electronic current limiting overload protection and circuit breaker on all models.
OVERVOLTAGE PROTECTION: "Built-in" continuously adjustable overvoltage protection is standard on all models. Response time 5-10 microseconds.
NO OVERSHOOT ON TURN ON/OFF OR POWER FAILURE.
DC OUTPUT CONTROL: Voltage adjustment over entire voltage range.
OVERVOLTAGE PROTECTOR CONTROL: Overvoltage adjustment covers entire operating range.
OVERVOLTAGE PROTECTION: Built-in, continuously adjustable overvoltage protection crowbars output when trip level is exceeded. Included on all models.
OVERLOAD PROTECTION: (Thermal) Thermostat—Automatic reset of thermostat on all models when overtemperature condition is eliminated.
OVERLOAD PROTECTION: (Electrical) External overload protection; fixed, automatic electronic current limiting circuit limits the output current upon external overloads, including short circuit, thereby providing protection for load as well as power supply. On EE and G packages, ON-OFF circuit breaker must be manually reset.
MOUNTING: One surface with tapped mounting holes for E and EE packages; package G is rack mounted.
INPUT CONNECTIONS: Heavy duty terminal block on rear of chassis.
OUTPUT CONNECTIONS: Two heavy-duty studs on rear of chassis.

AVAILABLE OPTIONS

G case models are available with mounted chassis slides. Add suffix "—CS" to the model number and $60 to the price.

G case models are available with meters. For meters use suffix "M" and add $75 to the price.

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

HV/HW HIGH EFFICIENCY POWER SUPPLIES

SPECIFICATIONS

The specifications for the HW Series are identical to those of the HV Series except that:

OUTPUT VOLTAGE: Refer to applicable charts.

LINE REGULATION: 1.0% for line variations from 105=132 VAC.

LOAD REGULATION: 1% for a 20% load to full load or full load to 20% load; or 1% full load to no load with a 20% preload throughout the voltage adjust range.

RIPPLE: 150 mv RMS or 1% of output voltage, whichever is greater.

OVERLOAD PROTECTION: (Electrical) External overload protection: fixed, automatic electronic current limiting circuit limits the output current upon external overloads, including short circuit, thereby providing protection for load as well as power supply. In addition, an automatic thermal reset switch is incorporated to sense overtemperature.

OVERVOLTAGE PROTECTION: (OPTIONAL) Built-in continuously adjustable overvoltage protection crowbars output when trip level is exceeded. Optional on all models. Add suffix OV to model number and $50 to price.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

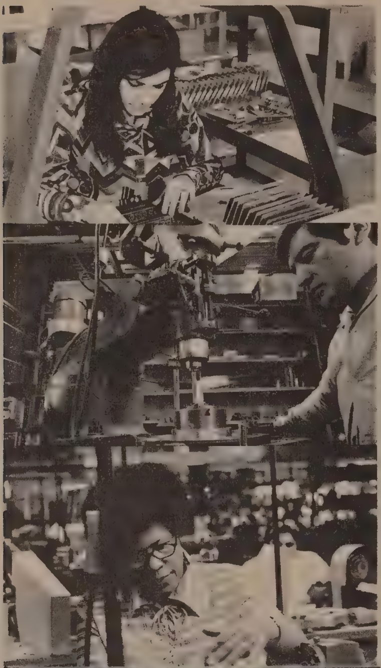
AT POWER/MATE...
QUALITY IS A SIMPLE MATTER



Simply Stated . . . "Every Power/Mate power supply must surpass its published performance specifications and conform to Power/Mate's rigid workmanship standards . . . OR . . . it doesn't leave our plant".

At Power/Mate, there is no compromise on Quality ! ! !

This high level of performance was **not simple** to achieve. It took much effort on everyone's part. Many of our employees and managers spent countless hours "burning the midnight oil". It took a total commitment to quality by everyone . . . from production to president. It means that our entire plant has to work together. It means a lot of training. It means skilled hands . . . specialized equipment . . . automated testing and much more. But it's worth it. "Because at Power/Mate we know how important it is to produce a quality power supply product".

Today we are proud of our achievements . . . We have combined a team of skilled men with machines, together with understanding, all producing power supplies you can depend on.

THERE IS NO
COMPROMISE
ON QUALITY!

UNI UNIVERSAL POWER SUPPLIES

PRODUCT DIGEST

The UNI Series VARI-rated power supply modules may be operated at any range of DC output voltages and currents, so the nine units replace literally thousands of more expensive, narrow-range power supplies. Collectively, the outputs of the UNI Series cover currents from 0 to 34 amperes and voltages from 0 to 34 volts. All units are UL approved.

These power supplies are compact, rugged, mount on any of three sides, and meet Mil Spec environment requirements. They are short-circuit proof, designed for efficient operation up to 71°C without external cooling, carry a 5-year Warranty, and are significantly less expensive than narrow-range units.

THE UNIQUE UNI CONCEPT

The key to the versatility of PMC's UNI Series is an exceptional design concept pioneered by POWER/MATE CORP. It allows any UNI power supply to be set for a range of DC outputs. This adjustable feature simplifies the customer's inventory situation, and it makes possible POWER/MATE's Same-Day-Shipment policy for UNI power supplies.

POWER SUPPLY MODEL UNI 30 B
POWER/MATE CORP
DO NOT OPERATE BEYOND INTERNAL VOLTAGE RANGE SETTING

SPECIFICATIONS

INPUT: 105-125V, 47-420 CPS.

OUTPUT VOLTAGE: 0-30 volts for all units except Uni-76 (0-34V); Uni-88 (0-34V); and UniTwin 164 (0-25V dual output).

OUTPUT VOLTAGE RANGE: Set in overlapping ranges by means of internal quick disconnect taps.

OUTPUT CURRENT: See chart on following page.

REGULATION: Uni-76 and Uni-88 better than ±0.005% +1MV for line and load. All other units better than ±0.01% +1MV for line and load.

RIPPLE: Less than 250 microvolts.

RESPONSE TIME: Less than 20 microseconds.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

OVERLOAD & SHORT CIRCUIT PROTECTION: Solid state short circuit and overload protected. Instantaneous recovery, and automatic reset. Unit cannot be damaged by prolonged short circuits or overloads.

POLARITY: May be either positive, negative or floating up to 300 volts.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20°C to +71°C ambient.

STORAGE TEMPERATURE: −55°C to +85°C.

OUTPUT CURRENT vs. TEMPERATURE: Unit is rated for full current output at temperatures between −20°C and +45°C and is linearly derated from +45°C to 70% of the full output at +71°C.

REMOTE-LOCAL SENSING: Provision is included to permit remote sensing of the output voltage directly at the load for improved over-all regulation. Unit may be connected for local sensing if desired.

REMOTE-LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted, or internally adjusted with coarse and fine controls. Both are accessible through holes in the terminal end of the supply.

MECHANICAL DATA

UNI power supplies may be mounted on any of three surfaces. They will function when mounted in any position.

3½-inch and 5¼-inch rack mounting assemblies are available, along with other accessories.

SAME-DAY-SHIPMENT

You can be sure that POWER/MATE CORP. will ship any of its UNI series power supplies to you the same day that your order arrives in our offices.

UL APPROVED

POWER/MATE's power supplies are listed as a recognized component in Underwriter Laboratory's recognized component index. (UL 478-1967).

5-YEAR WARRANTY

5 Year Warranty

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

THE POWER/MATE MANAGEMENT COMMITMENT TO QUALITY IS TOTAL

POWER/MATE MEANS PEOPLE

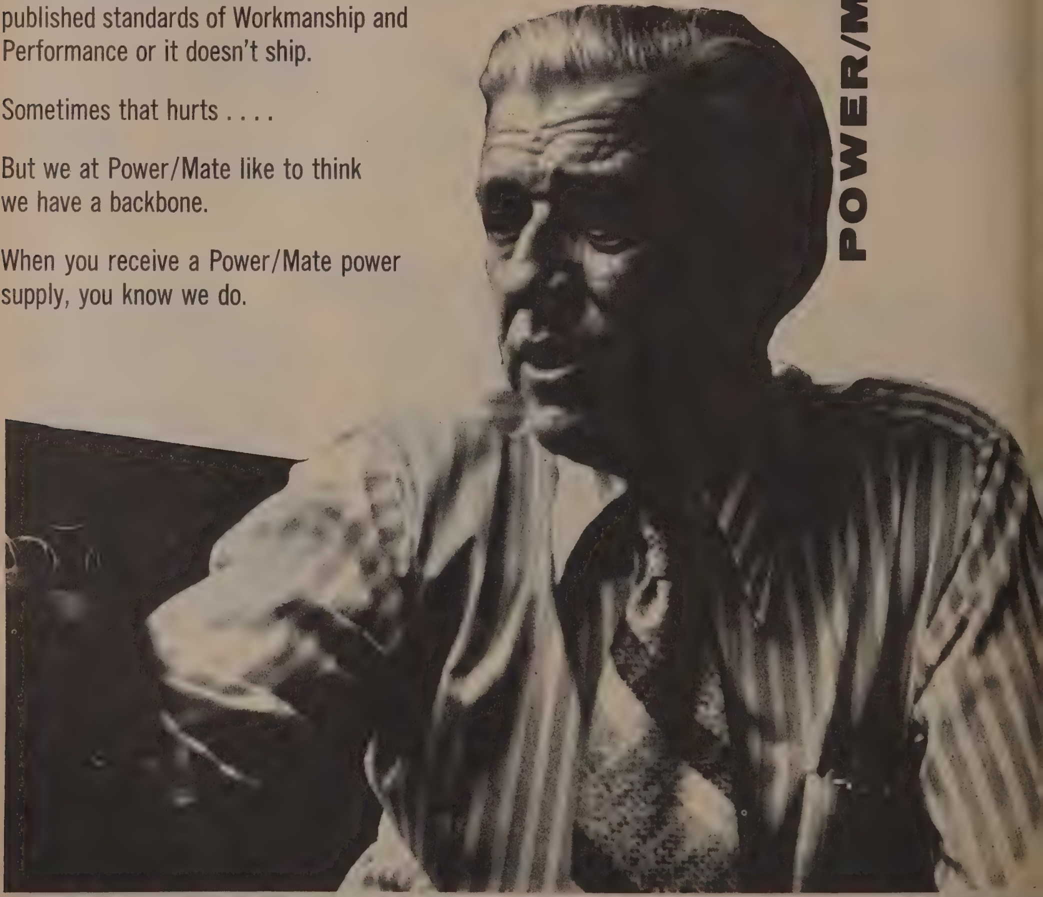
IT Also Takes Dedication, Guts, and Backbone . . . .

That's because there is no compromise or rationalization when it comes to to shipping out a quality product. Your power supply has to meet our published standards of Workmanship and Performance or it doesn't ship.

Sometimes that hurts . . . .

But we at Power/Mate like to think we have a backbone.

When you receive a Power/Mate power supply, you know we do.



PMC **POWER/MATE CORP.**

OEM POWER SUPPLIES

PRODUCT DIGEST

The POWER/MATE OEM Series of DC, regulated power supplies is available to manufacturers at liberal quantity discounts. This, combined with the fact that the OEM Series is based on the proven principles of the UNI Series, and is Underwriter Laboratory Approved, provides a quality, regulated voltage power supply that can save space, weight, and money.

One of the OEM Series space-saving features is a built-in over-voltage protection option that doesn't add a fraction to the basic module dimensions. Over-voltage protection is inside the module case, so there is no need for design changes in your product.

Complete freedom of mounting is another design advantage, by virtue of the fact that these power supplies are convection cooled. No heat sinking or forced air is required; however, substantial increases in ratings are possible with small amounts of forced air cooling.

The OEM power supplies can tolerate a wide input voltage and frequency range; therefore, they are suitable for field gear and worst-case conditions, reducing the need for special provisions.

Consider, too, that OEM units can be connected in series, parallel, or series/parallel for various outputs, and that the wide variety of POWER/MATE racks and metered or non-metered control panels and other accessories are compatible with the OEM Series. You can assemble virtually any supply system on the spot to meet your precise requirements.

SPECIFICATIONS

VOLTAGE INPUT: 105-125 VAC, 47-420 cps.

CURRENT OUTPUT: Up to 34 amps.

VOLTAGE OUTPUT: 3 to 48 volts.

REGULATION: ±0.01% line and load +1 mv.

RIPPLE: Less than 250 microvolts.

RESPONSE TIME: Less than 20 microseconds.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

OVERLOAD & SHORT-CIRCUIT PROTECTION: Solid-state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short-circuits or overloads.

POLARITY: May be either positive, negative or floating up to 300 volts.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20°C to +71°C ambient.

STORAGE TEMPERATURE: −55°C to +85°C.

OUTPUT CURRENT vs TEMPERATURE: Rated for full current output at temperatures between −20°C and +45°C. Linearly derated from +45°C.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

REMOTE OR LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted, or internally adjusted with coarse and fine controls. Fine control is accessible through hole in terminal end of supply.

MECHANICAL DATA

OEM power supplies may be mounted on any of their three surfaces.

They will function when mounted in any position.

3½ and 5¼-inch rack mounting assemblies are available, along with other accessories.

5 Year Warranty

UL APPROVED

POWER/MATE's power supplies are listed as a recognized component in Underwriter Laboratory's recognized component index. (UL 478-1967).

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

MIL/SPEC PERFORMANCE

Independently tested to meet the environment of MIL-E-5272 and related specs. See MIL SPEC Section of this catalog.

HOW TO ORDER POWER/MATE OEM POWER SUPPLIES

To specify voltage and current, including those not listed, place the required voltage after OEM-, and the current after the case size A, B, etc.

For example: OEM-34C-2.25 or OEM-5-HOV for over-voltage protection.

AVAILABLE OPTIONS

1. Built-in over-voltage protection at $30 per unit. Use suffix "OV."
2. Fungus proofing, with MIL-V-173 varnish, for all fungus nutrient components, at $10 per unit. Use suffix "FP."
3. AC input. All units are available with 208 VAC ±10% (use suffix "L") or 230 VAC ±10% (use suffix "LL") at no extra cost.

OTHER VOLTAGE/CURRENT COMBINATIONS AVAILABLE

It is always worthwhile to contact POWER/MATE, even if the exact power supply you need is not shown in this catalog. The supply you want has probably been designed and is in the PMC "design bank" waiting to be specified. Send us your specifications on the sheet provided in the back of this catalog.

4. Dual AC input. All units are available with 208 VAC and 230 VAC (use suffix "Y," at $25 per unit).
5. Dual primary. All units are available with 230 VAC and 115 VAC (use suffix "X," at $25 per unit).

FR FULL RANGE POWER SUPPLIES

PRODUCT DIGEST

The new Power/Mate "FR" Full Range Modular Power Supply Series combines the field proven reliability of our Uni-Power and OEM Series with the benefits of our same day off-the-shelf delivery to give the Systems Engineer a new dimension in design flexibility.

Now, with the new "FR" Series, the full wide voltage ranges of these modular power supplies may be accomplished without the necessity of internal power supply adjustments or changes. The power supplies may be set at any voltage within the specified range by merely a simple pot adjustment.

Built-in overvoltage protection is optional and does not add a fraction to the module dimensions. Thus, all components are internal — no need for design changes or extra space in your product.

All "FR" power supply modules feature remote sensing and programming, built-in current limiting with automatic recovery, thermal overload protection, excellent temperature stability and may be connected in series, parallel or series/parallel for virtually any voltage and/or current output. Plus, the new "FR" Series is backed by Power/Mate's Five Year Warranty.

Accessories available for use with the "FR" Series include Power/Mate's full line of rack adapters and metered panels.

AC INPUT

SPECIFICATIONS

VOLTAGE INPUT: 105-125 VAC, 47-420 cps.

CURRENT OUTPUT: Refer to applicable chart.

VOLTAGE OUTPUT: Refer to applicable chart.

REGULATION: ± 0.01% line and load +1 mv.

RIPPLE: Less than 250 microvolts.

RESPONSE TIME: Less than 20 microseconds.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.25% for 8 hours.

OVERLOAD & SHORT-CIRCUIT PROTECTION: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short-circuits or overloads.

POLARITY: May be either positive, negative or floating up to 300 volts.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20C° to +71°C ambient.

STORAGE TEMPERATURE: −55°C to +85°C.

OUTPUT CURRENT vs. TEMPERATURE: Rated for full current output at temperatures between −20°C and +45°C. Linearly derated from +45°C as shown in charts.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

REMOTE OR LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted, or internally adjusted with coarse and fine controls. Fine control is accessible through hole in terminal end of supply.

MECHANICAL DATA

The "FR" Series power supplies may be mounted on any of three surfaces. They will function when mounted in any position.

3½-inch and 5¼-inch rack mounting assemblies are available, along with other accessories.

SAME DAY SHIPMENT

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

RACKS AND ACCESSORIES

PRODUCT DIGEST

All PMC racks and accessories accommodate a variety of PMC modules in any configuration in a standard 19″ rack, 3½″ high or 5¼″ high, with 5 different styles. All of the racks and panels are finished in durable baked gray enamel, with predrilled and tapped holes, ready for easy assembly.

THE PMC "BUILDING BLOCK" APPROACH

Because most PMC power supply modules are compatible with PMC racks, panels and other accessories, an infinite variety of combinations is possible to produce the exact requirements of the application. Assembly of a CUSTOM power supply, instead of specifying a "special order," gains the substantial benefits of lower cost and the use of industry proven and accepted PMC power supplies.

This approach also gives the engineer a new dimension in design freedom. He chooses from readily available, off-the-shelf, standard modules (at standard prices), and from matching off-the-shelf mounting racks, metered and non-metered control panels, in addition to the complete assortment of other accessories.

RACKS AND ACCESSORIES

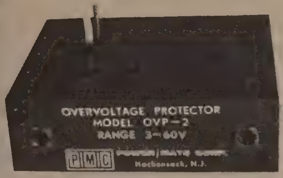
ACCESSORIES

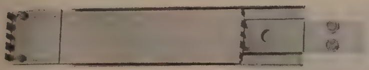
REAR PANELS for use with AP or AR-35 and AP or AR-425 series accessories racks. Six terminal barrier strips are mounted on each panel for ease of input/output conection. Complete with mounted hardware and all terminals marked for ease of wiring.

Models RP-35-1 and RP-525-1:



OVERVOLTAGE PROTECTOR for use on any POWER/MATE power supply up to 34 amps. Self contained crowbar type solid state unit. Independent of power supply or type of failure. Output adjustable to trip between 3 and 60 volts. Trips within 10 microseconds. Dimensions 2⅞ x 3⅜ x 1

Model OVP-2



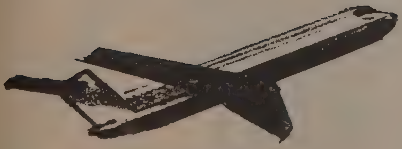
RACK SLIDE for use with all POWER/MATE CORP. racks. Feature quick disconnect and ball bearing action. Includes hardware for mounting.

Model CS-1

ADAPTER for mounting type A, B, C and D cases in AR525 rack. Permits mounting 3½ inch height modules in 5¼ inch mounting space on AR525 rack. Permits complete intermixing of both 3½ and 5¼ inch supplies in this rack. Complete with hardware.

Model A525-1

SAME DAY SHIPMENT



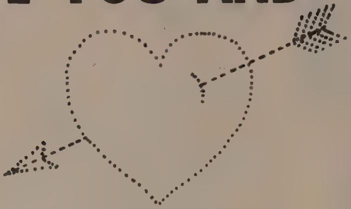
HOW TO ORDER ACCESSORIES:

Determine the quantity of each unit you will need and order them by the model numbers shown above. Notice that numbers ending in 35 represent the 3½ inch rack and those ending in 525 indicate the 5¼ inch rack.

PMC racks and accessories plus PMC's high quality power supplies give you the best possible combination of design freedom and proven reliability. If you have further questions, please contact either your local PMC Representative or POWER/MATE CORPORATION.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

POWER/MATE DOESN'T LOVE YOU AND LEAVE YOU



Because SERVICE to our CUSTOMERS is one of our KEY policies.

That's why we have automated and computerized our entire paper work system . . . so our people can spend more time serving you and your needs.

And that's why our Customer Service group is under one responsible operating manager. His task encompasses order handling, processing applications, field service and technical publications; and most importantly over $1,000,000 worth of finished power supply inventory on the shelf! ! !

All these services are coordinated to serve you better and more efficiently than anyone else.

BP LABORATORY POWER SUPPLIES

PRODUCT DIGEST

The POWER/MATE Bench Pac (BP) line of laboratory power supplies consists of 23 different models. This versatile group of DC bench units, voltage and current regulated, can meet every laboratory and systems power supply requirement, offering a complete range of outputs from 0 to 60 volts with currents up to 15 amperes.

Special features of the UniPower Bench Pacs include: high accuracy, adjustable current limiting, concentric controls for course and fine voltage adjustment, constant voltage and/or constant current, front panel remote sensing of output voltage (Models "E" through "H"), AC indicator, on/off switch, five-way binding posts, easy-to-read dual meters, and the added feature of built-in short-circuit protection.

Low in cost and high in performance, these general-purpose bench supplies employ the same field-proven designs and state-of-the-art solid state silicon circuitry found in POWER/MATE's UNI Series and OEM Series power modules. The UNI concept provides a combination of mechanical and electrical maximum reliability features, and the Bench Pacs carry the full 5-Year POWER/MATE Warranty.

REGULATED POWER SUPPLY

REGULATION —
Load: The regulation for load changes is less than .01% +1 millivolt, whichever is greater from no load to full load.

Line: The regulation is less than 0.01% +1 millivolt, whichever is greater, for a line change from 125V to 105V at constant load.

RIPPLE: Less than 250 microvolts.

SPECIFICATIONS

INPUT: 105-125 Volts, 47-420 cps, single phase.

OUTPUT VOLTAGE AND CURRENT: See Respective Tables.

REGULATION —
Load: The regulation for load changes is less than .01% +1 millivolt, whichever is greater from no load to full load.

Line: The regulation is less than 0.01% +1 millivolt, whichever is greater, for a line change from 125V to 105V at constant load.

RIPPLE: Less than 250 microvolts.

TRANSIENT RESPONSE: For a ±10 Volt step change in line voltage, or for a no load to full load, or a full load to no load step change, the output voltage will return to within 10 millivolts of the regulated region in less than 20 microseconds.

METERS: Voltmeter and ammeter, rated accurate to 2% of full scale value, are provided on the front panel.

POLARITY: The output may be "floated" up to 300V peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

CONSTANT CURRENT, CONSTANT VOLTAGE: Constant current and constant voltage levels may be preset within the maximum rated voltage and current levels specified in appropriate tables. The intersection of the constant voltage and constant current operation lines called the "Crossover Point" may be located anywhere within the output volt-ampere range of the unit. Regardless of the demands of the load, the output voltage and/or the output current will never exceed the limits (1% or better) preset by the output voltage and output current controls.

CONTROLS —
Voltage: Continuously variable coarse and vernier DC OUTPUT ADJUST potentiometers on concentric shafts provide variable DC Output.

Current: Continuously variable single turn potentiometer provides current limiting adjustment.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

DUTY: Continuous at ambient temperatures from 0°C to 50°C. Operation above 50°C is allowed provided the output current is derated 20% for every 10°C rise above 50°C.

REMOTE SENSING: Sensing terminals, separate from the Output terminals, provide sensing and load regulation against the voltage at the load rather than the voltage at the power supply output terminals on Models "E" through "H". This eliminates the otherwise unavoidable load regulation due to the voltage drop in the wires connecting the supply to the adjacent load.

REMOTE PROGRAMMING: The output voltage may be controlled accurately from a remote point if desired by inserting a resistance across the REMOTE PROGRAM terminals. The sensitviity of this circuit is approximately 100 ohms per volt on Models "E" through "H".

PARALLELING: Two or more units may be operated in series to provide higher voltage output at rated current. Units of the same voltage and current ratings may be operated in parallel.

PROTECTION: Load and power supply protection for any overload condition is accomplished by an adjustable electronic current limiting circuit controlled by a front panel potentiometer.

AIRFLOW: All units are convection cooled and do not require internal blowers or depend on internal forced air cooling.

INSPECTION: MIL-Q-9858 Procedures.

MECHANICAL DATA

FINISH: Front panel is finished with dual tone grey and black baked enamel. Panel marking is grey. All other finishes are appropriate paint, plating, or chemical film as required.

MOUNTING: Units are designed for bench operation, however, rack adapters are available (see page 55).
Consult factory for special systems configurations.

ACCESSORIES: Bench Pacs can be rack mounted as required. Up to three Series "C," or two Series "D" power supplies will mount in a standard 19" rack, just 3½" high.

PR HIGH CURRENT RACK POWER SUPPLIES

PRODUCT DIGEST

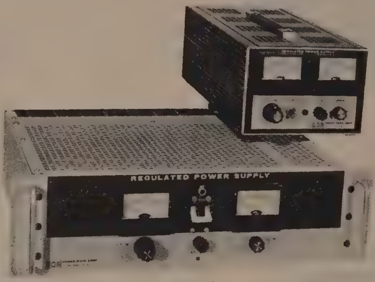
Power/Mate's new Power Rack "PR" Series, high current power supplies, consist of 16 different models in three all convection cooled package sizes (HM, K and L packages). The "PR" Series are both voltage and current regulated and can satisfy virtually every laboratory and systems power supply requirements. A complete range of outputs from 0-60 VDC with currents to 100 amperes are available as standard models.

Special features of the "PR" Series include high accuracy, adjustable current limiting, concentric controls for course and fine voltage adjustment, constant voltage and/or constant current, remote sensing, large easy to read precision meters and built-in short circuit and overload protection. Built-in overvoltage protection is offered on all models.

Power/Mate's unique "SIMAG" design concept (patent pending) allows the power supplies to be packaged in approximately 20% less space than equivalent conventional series power supplies.

The "PR" Series offer the same wide variety of options as the other Power/Mate Corporation systems power supplies. Typical available options are fungus proofing with MIL-173 varnish, wide input AC ranges, chassis slides, and overvoltage protection.

As with all Power/Mate power supplies, the new "PR" Series is backed by Power/Mate's Five Year Warranty.



REGULATED VOLTAGE:
Line— 0.015% + 1mV for line variations from 105-132 VAC.
Load— 0.015 % + 1mV for load variations from 0 to full load.

RIPPLE: Less than .5mV RMS with either positive or negative terminal grounded.

SPECIFICATIONS

AC INPUT: 105-132 VAC, 57-63HZ;
Package L 188-238 VAC, 57-63HZ.

OUTPUT VOLTAGE AND CURRENT: See respective tables.

REGULATED VOLTAGE:
Line— 0.015% + 1mV for line variations from 105-132 VAC.
Load— 0.015 % + 1mV for load variations from 0 to full load.

RIPPLE: Less than .5mV RMS with either positive or negative terminal grounded.

CURRENT REGULATION: Less than 0.05% of maximum rating, 0-95% DC Voltage change.

CURRENT RIPPLE: Less than 0.05% of maximum rating.

METERS: Voltmeter and ammeter, rated accurate of 2% of full scale value, are provided on the front panel.

POLARITY: The output may be "floated" up to 300 V peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

FINISH: Front panel is finished with dual tone gray and black baked enamel with brushed aluminum handles. Panel marking is gray. All other finishes are appropriate paint, plating, or chemical film, as required.

TEMPERATURE COEFFICIENT: Better than 0.015%C.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

OVERLOAD AND SHORT CIRCUIT PROTECTION: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short circuits or overloads.
Thermal—Thermostat; automatic reset when overtemperature condition is eliminated.

AMBIENT OPERATING TEMPERATURE: Continuous duty from 0 to +71°C ambient.

STORAGE TEMPERATURE: —55°C to +85°C.

INPUT AND OUTPUT CONNECTIONS: Heavy duty terminal block on rear of chassis.

OVERVOLTAGE PROTECTION: Optional

AVAILABLE OPTIONS

OVERVOLTAGE PROTECTION: Built-in overvoltage protection is optional on all models. To order OVP, add suffix "OV" to the model number and add $35 to the price for "H" package, $60 to the price for "K" package, and $100 to the price for "L" package.

5 Year Warranty

5-YEAR WARRANTY

To express our confidence in the skill and care with which our power supplies are designed and built — confidence based on an impressive 100,000 hour MTBF — we offer the POWER/MATE 5-Year Warranty.

MM MINIATURE POWER SUPPLIES

PRODUCT DIGEST

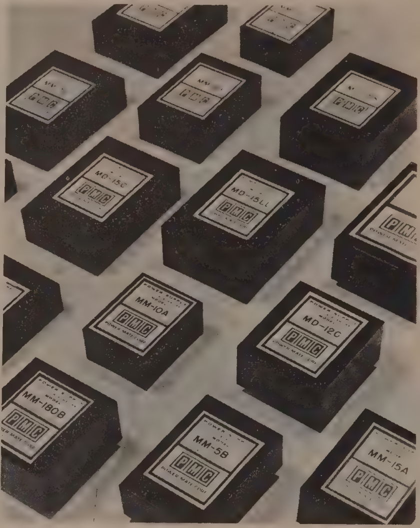
The Power/Mate "Mini/Mate" Series regulated power supplies are a minature encapsulated series of DC power supplies which, in addition to their high performance qualities, are ultra-reliable, compact, rugged and moderate in price.

All Mini/Mate encapsulated power supplies are "potted" with an aluminum oxide filled epoxy. This is among one of the many superior construction techniques which allow higher heat conduction to insure highly reliable operation and virtually any environmental condition.

The Mini/Mate Series contain both AC to DC and DC to DC power supplies, and are available with either single or dual outputs. The output voltage and current ranges of the Mini/Mate Series provide the user with maximum versatility. Over 165 models are available in voltages from 3.6 Vdc to 200 Vdc with current to 2 amp. The Mini/Mates are particularly appropriate for use in today's modern applications. Common uses for the Mini/Mate Series are the power Operational Amplifiers, Digital Logic, Shift Registers, ROM's, RAM's, A to D converters, D to A converters, and other signal conditioning instrumentation.

The Mini/Mate Series are packaged in either the standard rectangular case or Power/Mate's new space saving "Mini-Square" module that saves PC board area for more compact designs.

Whatever your choice, AC to DC, DC to DC, encapsulated or plug-in, each of these miniature DC power supplies is backed by Power/Mate's world-wide reputation for power supply excellence.



SPECIFICATIONS

INPUT VOLTAGE: 115 ±10VAC, 50-400 cps.

OUTPUT VOLTAGE: Up to 200VDC. (See charts).

OUTPUT CURRENT: Up to 2 Amps. (See charts).

LOAD REGULATION: ±0.015% (NL-FL) above 10VDC. ±0.035% (NL-FL) up to 10VDC.

LINE REGULATION: ±0.015% (NL-FL) above 10VDC. ±0.02% (NL-FL) up to 10VDC.

RIPPLE: Less than 500 microvolts up to 15VDC. Less than 1.0 mv above 15 VDC.

OPERATING TEMPERATURE RANGE: 0-71°C.

STORAGE TEMPERATURE: −25°C to +85°C.

OUTPUT IMPEDANCE: 0.2 ohms @ 10KHZ.

TEMPERATURE COEFFICIENT: 0.02%/°C Max.

OUTPUT CURRENT VC TEMPERATURE: Each output is rated for full current at temperatures between −20°C and +50°C and is linearly derated from +50° to 70% of the full output at +71°C.

SHORT CIRCUIT PROTECTION: The Mini/Mate Series power supplies are ruggedly constructed, and designed with built-in short circuit protection to withstand substantial overloads for reasonable periods of time. The output can be shorted without causing damage to the power supply. However, prolonged operation with the supply overloaded or shorted is not recommended.

PRECISION OUTPUT ADJUST: The output voltage of each supply is factory set to within ±2% of the specified voltage. The TRIM connection, where provided, allows a means of externally adjusting the output voltage precisely to the labeled voltage.

AVAILABLE OPTIONS

1. For 230VAC, add suffix "-230" to model number and add $5.00 to price.

SAME DAY SHIPMENT

Each MM unit is warranteed for 1 full year.

DD MINIATURE POWER SUPPLIES

MINI/MATE DC TO DC CONVERTER — DESCRIPTION

Power/Mate's new DC Series dual output DC to DC converters is the result of Power/Mate's engineering development program to offer the OEM user a full line of high efficiency, low cost DC to DC power supplies.

These new units are designed for use in application that requires precise regulation from a DC source. The DD Series are ideally suited for use with brute force High Current DC power sources such as Power/Mate's FPS Series ferroresonant power supplies. By combining the advantages of a preregulated DC input, the DD Series converters provide isolation, high efficiency and excellent point of load regulation.

The mechanical design is compatible with today's PC Board pin spacing for proper mating with standard logic cards and op amps.

MINI/MATE DC TO DC SPECIFICATIONS

INPUT VOLTAGES: 5V, and 28VDC.

OUTPUT VOLTAGES: ±12, ±15, ±18, and ±24VDC.

OUTPUT CURRENT: 50mA, 100mA, and 200mA.

REGULATION: Line and Load 0.02% max.

INPUT RIPPLE: Less than 1% P-P of Nominal Input Voltage.

OUTPUT RIPPLE AND NOISE: 1mV RMS max.

OPERATING TEMPERATURE RANGE: −25°C to +71°C.

ISOLATION DIFFERENCE: 1/0 300VDC min.

TEMPERATURE COEFFICIENT: 0.02%/°C.

EFFICIENCY: Nominal line at full load (refer to charts).

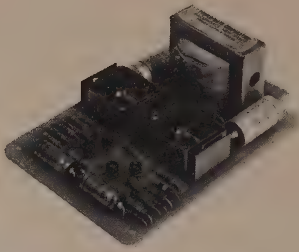
CP CARD-PAC SERIES

PRODUCT DIGEST

The new CARD/PAC Series all-silicon P.C. board power supplies are among the most competitively priced power supplies in the industry and provide a compact, low-cost regulated DC voltage source. Using P.C. board construction for economy, these power supplies provide high performance in a unit compatible in packaging and price with the new generation lower cost integrated circuits, operational amplifiers, and digital function devices.

All components are high quality computer-rated for long life. The CARD/PAC Series cannot be damaged by prolonged short circuits or overloads. In addition, the CARD/PAC Series are backed by the same 5-year warranty given all POWER/MATE power supply products.



LINE REGULATION: 0.01% or 1 mV (whichever is greater).
LOAD REGULATION: 0.05%.
RIPPLE: Less than 1 mV RMS max.

SPECIFICATIONS

VOLTAGE INPUT: 105-125 VAC, 50-440 CPS.

CURRENT OUTPUT: Up to 1 amp.

VOLTAGE OUTPUT: 3 to 50 volts.

LINE REGULATION: 0.01% or 1 mV (whichever is greater).

LOAD REGULATION: 0.05%.

RIPPLE: Less than 1 mV RMS max.

TEMPERATURE COEFFICIENT: Better than 0.02%/°C (typical).

OVERLOAD PROTECTION: Power supply cannot be damaged by current overloads.

POLARITY: May be either positive , negative or floating.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −25°C to +71°C ambient.

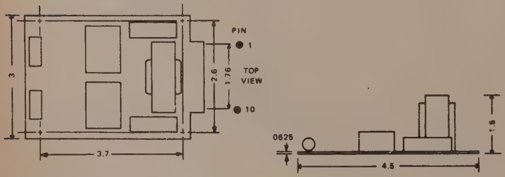
STORAGE TEMPERATURE: −25°C to +85°C.

OUTPUT CURRENT VS. TEMPERATURE: Rated for full current output at temperatures between −25°C to +71°C.

REMOTE OR LOCAL SENSING: Provision included for remote sensing of output voltage directly at the load, for improved overall regulation. Also may be connected for local sensing.

MECHANICAL DATA

CARD/PAC "A": 3"W x 4.5"L x 2"H
CARD/PAC "B": 3"W x 4.5"L x 1.5"H



AVAILABLE OPTIONS

1. Improved regulation, 0.01%, available at $5 per unit. Add suffix R to model number (Example: CP-9MR).
2. Ten-pin P.C. card connector. Order separately as CARD/PAC CONN at $3.00 ea.

CARD/PAC CONNECTIONS

FOR CARD/PAC "B" (9 VDC TO 15 VDC)

PIN 1	No. Conn.	PIN 6	−VDC out
2	No. Conn.	7	−Sense
3	AC in	8	AC in
4	No. Conn.	9	+VDC out
5	No. Conn.	10	+Sense

Connect Pin 6 with Pin 7, Connect Pin 9 with Pin 10, take output between Pins 6 and 9

TO OPERATE WITH REMOTE SENSING:

a. Connect Pin 9 to positive side of load.
b. Bring out a separate lead from Pin 10 to positive side of load.
c. Connect Pin 6 to negative side of load.
d. Bring out a separate lead from Pin 7 to negative side of load.

FOR CARD/PAC "B" (GREATER THAN 15 VDC OUTPUT)

PIN 1	−Sense	PIN 6	No Conn.
2	−VDC out	7	No Conn.
3	AC in	8	AC in
4	No Conn.	9	+VDC out
5	No Conn.	10	+Sense

Connect Pin 1 with Pin 2, Connect Pin 9 with Pin 10, take output between Pins 2 and 9

CARD/PAC A CONNECTIONS (LESS THAN 9VDC OUTPUT)

PIN 1	Positive Sense—Connect Pin 1 to Pin 2	8	AC Line
2	Positive VDC	9	Negative VDC—Connect Pin 9 to Pin 10
3	AC Line	10	Negative Sense
4, 5, 6 and 7	No Connections		

TO OPERATE WITH REMOTE SENSING:

a. Connect Pin 2 to positive side of load.
b. Bring out a separate lead from Pin 1 to positive side of load.
c. Connect Pin 9 to negative side of load.
d. Bring out a separate lead from Pin 10 to negative side of load.

CARD/PAC B CONNECTIONS (DUAL)

PIN 1	Negative Sense	6	Output Common
2	Negative VDC	7	Positive Sense—Common
3	AC Line	8	AC Lne
4	Negative Sense-Common	9	Positive VDC
5	Output Common	10	Positive Sense

NOTES:
A. Connect Pin 1 with Pin 2
B. Connect Pins 4, 5, 6, and 7 together
C. Connect Pin 9 with Pin 10

TO OPERATE WITH REMOTE SENSING:

a. Connect Pin 2 to negative side of load.
b. Bring out a separate lead from Pin 1 to negative side of load.
c. Connect Pin 5 or 6 to common point of load.
d. Bring out separate leads from Pins 4 and 7 to common point of load.
e. Connect Pin 9 to positive side of load.
f. Bring out a separate lead from Pin 10 to positive side of load.

RA POWER MODULES

PRODUCT DIGEST

All Silicon Semiconductors Throughout
All Units Rated for Continuous Duty at −20° to +71°C Ambient
Short Circuit Proof — May be Shorted Indefinitely without Damage
Automatic Overload and Short Circuit Recovery
No External Heat Sink or Cooling Required up to +71°C
MTBI — Over 100,000 Hours
All Components Accessible and Replaceable for Maintenance
Top Quality Components and Rugged Construction
All Power Supplies Subjected to Rigorous QC Inspections

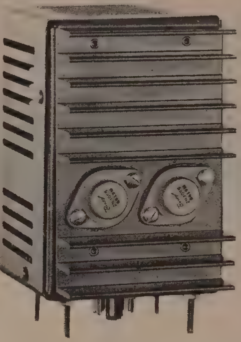
The RA Series of modular power supplies provide regulated voltage outputs between 0 and 400 volts at output currents up to 25 amperes, at regulations of 0.05 or 0.5%, according to the model selected.

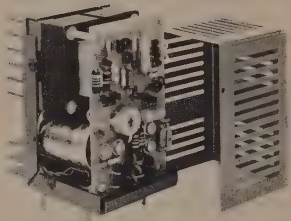
Silicon semiconductors are used exclusively in the power supply circuitry. This together with the internal heat sinking provided in the supply enables full load operation of the unit at ambient temperatures of 71°C without any additional cooling, heat sinking, and without derating.

The RA Series power supplies are completely short circuit proof. The output may be short circuited indefinitely without damage. A unique circuit reduces the output current and voltage if the full load rating of the supply is exceeded. This not only protects the power supply, but serves to protect the load against further damage due to excessive current flow. The power supply automatically restores itself to normal operation after the short or overload is removed.

All components are accessible and replaceable in the field if required. All components are conservatively rated and are of the highest quality. For example, the electrolytic capacitors are 85°C types and the transformers are MIL-T-27 quality.

Connections at the connector permit either internal or remote adjustment of the output voltages. External connections also permit the remote sensing of the voltage directly at the load for improved overall load regulation on the RA Series.





REGULATION: ±0.05% or 2 MV (whichever is greater) vs line and load for RA Series

RIPPLE: Less than 0.002%, or 1 MV RMS (whichever is greater) for RA Series

SPECIFICATIONS

INPUT: 105-125 VAC, 47-420 CPS.

OUTPUT: See Specific Model Listed.

REGULATION: ±0.05% or 2 MV (whichever is greater) vs line and load for RA Series.

RIPPLE: Less than 0.002%, or 1 MV RMS (whichever is greater) for RA Series.

RESPONSE TIME: 50 Microseconds.

OPERATING AMBIENT TEMPERATURE: −20° to +71°C.

TEMPERATURE COEFFICIENT: 0.015%/C or 1.8 MV, whichever is greater.

OUTPUT ADJUSTMENT: Either internal or external as desired.

COOLING: None required at specified ambients.

POLARITY: May be either positive, negative, or floating (up to 300 volts).

OVERLOAD PROTECTION: Solid state short circuit and overload protected, instantaneous recovery and automatic reset.

MEAN TIME BETWEEN FAILURES: 100,000 hours typical, calculated according to MIL Handbook 217A.

MILITARY SPECIFICATIONS: Designed to meet the environmental requirements of MIL-E-5272, and RFI requirements of MIL-I-6181.

OPTIONS

OVER-VOLTAGE PROTECTION: Additional charge 30% ($50.00 min.).

Solid-state crow-bar protection for voltage sensitive loads is available for all RA models. Trip point of crow-bar is adjustable. The addition of crow-bar circuitry generally requires next larger case size for N & R case supplies. Larger units can generally accommodate crow-bar circuitry. Consult factory for confirmation of case size when ordering. Add suffix V to model number when ordering.

ACCESSORIES

PANEL & CHASSIS MOUNTING ADAPTER: This adapter permits any standard **POWER/MATE** module to be surface mounted to either a chassis or panel. Includes socket. Order part no. A200- (—). Follow model no. with module case size with which adapter would be used. Cost — ANY TYPE $14.75.

NOTE: For all models up to and including 6 amps, with octal output plug. Consult factory for 12 and 25 amp models. RI-500 ohm pot for models prefixed RA2 thru RA8, RA327 thru RA385. Use 5000 ohm pot for models prefixed RA10 thru RA295.

POWER SUPPLY WEIGHTS

The approximate weight of POWER/MATE power supply modules is primarily determined by the case size as shown below. Consult the factory for the exact weight of any specific model.

For approximate shipping weight, increase the weights shown by one-third.

Case Size	Net Weight (pounds)
N	2¼
R	3¾
RH	4¾
BRH	5½
T	8¾
TH	9¼

D C POWER SUPPLIES

- 2 Year Warranty
- 2 Hour Burn In
- Full Rated to 50°C

Standard Units Feature:

Remote Sensing On All Units
105-125 VAC, 47-440 HZ Input
±.02% Regulation
Reverse Voltage Protection
Tracking on Dual Outputs

- I C Regulation
- Foldback Current Limit
- Popular Industry Sizes

HI-VOL Units Feature:

Built In OVP on 5V Units
115/230 VAC ± 10% 47-440 HZ Input
±.05% Regulation
Wider Variety of Outputs

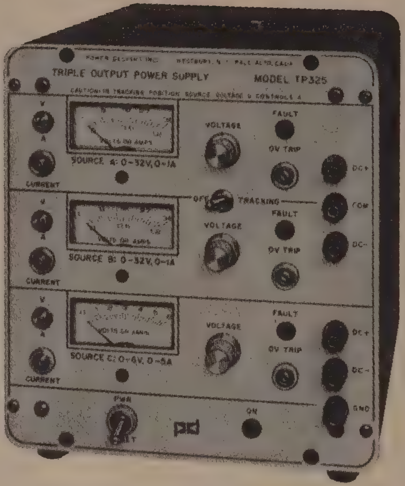
TECHNICAL DATA

TRIPLE OUTPUT LABORATORY POWER SUPPLY DIGITAL AND ANALOG APPLICATIONS

MODEL TP325



0-32 VDC, 0-1A*

0-32 VDC, 0-1A*

0-6 VDC, 0-5A

NOISE & RIPPLE LESS THAN 1.0 MILLIVOLT P-P

* Independent or 0.1% tracking with panel switch

features:

- No derating. All outputs may be operated simultaneously at full capacity for a maximum of 94 VA.
- Outputs are floating with respect to each other and chassis except for an internal connection between one negative terminal and one positive terminal of the 32 volt sources. The two 32 volt sources may be operated in series to provide 0-64 VDC, 0-1A in any polarity with respect to chassis or left floating. The 0-6 VDC source may be operated in any polarity with respect to chassis or left floating.
- Independent adjustment of each output voltage utilizing 10-turn potentiometers with .05% resolution.
- Separate current limiting adjustment for each output.
- Separately adjustable overvoltage crowbars on each output. Overvoltage crowbars on 0-32V outputs trip simultaneously at the lower voltage trip setting of either source.
- Three taut band suspension dual range meters individually selectable for voltage or current of each source.
- A "FAULT" indicator lamp on each output signals overload, short circuit, crowbar trip or current limit operation.
- Automatic voltage tracking of the 0-32 VDC sources to ±0.1% by means of a panel toggle switch. This switch is equipped with a locking lever to prevent accidental operation. Single potentiometer control of tracking outputs.
- Outputs may be shorted into each other in any polarity without damage.

electrical specifications:

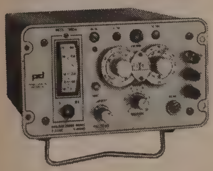
CALIBRATED POWER SOURCES

CALIBRATED, STABLE, LOW NOISE, HIGH RESOLUTION POWER SOURCES FOR PRECISION LABORATORY APPLICATIONS

0-20 VDC/0-500 mA

MODEL 2005A

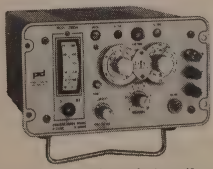


***$350.00**

• Two dual concentric switches (four decades) and a calibrated potentiometer provide digital readout to five significant figures • A toggle switch provides readout to six figures above 10 volts • Last-place potentiometer has 10 µV resolution • Source impedance is less than two milliohms at DC, less than 0.5 ohms at 1 MHz • Recovery time is less than 25 microseconds to return within a 100 µV band of the programmed voltage for an 80% load change • Front and rear access terminals.

• Better than 0.1% calibration accuracy • Critical components in temperature stabilized oven • 10 PPM plus 100 µV stability for 8 hours • Temperature coefficient better than 10 PPM or 50 µV per °C • Self-restoring overload and short circuit protection with adjustable current limit control and flashing limit indicator • 100 µV maximum peak-to-peak ripple (250 µV on Model C400) • Solid silver decade switch contacts • 100 hour minimum burn-in prior to calibration • Individual calibration data furnishd with each unit • Provisions for remote sensing and remote resistance programming at 1000 Ω/volt • Voltage or current metering.

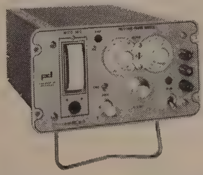
0-20 VDC/0-2 A



• Two dual concentric switches (four decades) and a calibrated potentiometer provide digital readout to five significant figures • A toggle switch provides readout to six figures above 10 volts • Last-place potentiometer has 10 µV resolution • Source impedance is less than two milliohms at DC, less than 0.5 ohms at 1 MHz • Recovery time is less than 25 microseconds to return within a 100 µV band of the programmed voltage for an 80% load change • Front and rear access terminals.

MODEL 2020A ***$395.00**

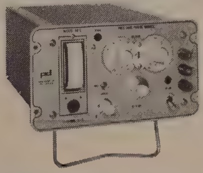
0-40 VDC/0-1 A



• Two dual concentric switches (4 decades) and a calibrated 10-turn potentiometer provide calibrated readout to six significant figures • Sixth place interpolation with 10 microvolt resolution • Dial accuracy is 0.1% plus one millivolt below one volt, 0.1% from one to forty volts • Front and rear access terminals • Bail/carrying handle tilts front panel for viewing ease • Electrical characteristics similar to Model 2005A.

MODEL 4010 ***$395.00**

0-100 VDC/0-400 mA



• Two dual concentric switches (4 decades) and a calibrated 10-turn potentiometer provide calibrated readout to six significant figures • Sixth place interpolation with 10 microvolt resolution • Dial accuracy is 0.1% plus one millivolt below one volt, 0.1% from one to 100 volts • Front and rear access terminals • Bail/carrying handle tilts front panel for viewing ease • Electrical characteristics similar to Model 2005A.

MODEL C400 ***$395.00**

HIGH VOLTAGE POWER SOURCES

CALIBRATED POWER SOURCES FOR PHOTOMULTIPLIER PROPORTIONAL AND SOLID STATE DETECTORS, ELECTRON OPTICS, LASERS, CRT DISPLAYS

MODEL 1556B

Calibrated high voltage power sources supplying tightly regulated DC for critical applications where stability, low noise and reliability are of prime consideration. • .25% calibration accuracy • 10 MV resolution • Sealed transformers and rectifiers • Self-restoring overload and short circuit protection • All solid state except for "Series" Pass Tube • Voltage and current metering.

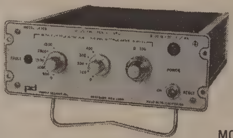
PHOTOMULTIPLIER HIGH VOLTAGE CALIBRATED POWER SOURCE

10-3000 VDC 0-10 MA



MODEL 3K10B

The Model 3K10B is a calibrated laboratory power source ideally suited for photomultiplier and similar applications requiring high stability, low noise and superior regulation.

This all solid-state supply achieves high efficiency and unusually compact construction through the use of high frequency technology.

The Model 3K10B incorporates proprietary overvoltage and arc protection circuitry which prevents damage to the supply and its load in the event of failure or voltage transients generated by sustained arcing at the load. The power supply is automatically shut off and a fault indicator illuminated. Normal function is restored by turning the AC switch off then on again.

The Model 3K10B may be remote resistance or voltage programmed over its entire range. It may also be programmed over a limited range around a preset voltage by an analog signal to provide automatic amplitude or drift compensation control for a photomultiplier tube system. (See options.)

The power supply may be operated in either positive or negative output polarity by means of a reversing switch on the rear of the unit.

Two paralleled Safety High Voltage (SHV) BNC connectors provide dual output or meter monitoring at the rear panel. These connectors are National Bureau of Standards approved per DWG ND-545A.

High voltage transformers and critical circuit elements are environmentally isolated in vacuum encapsulated epoxy modules.

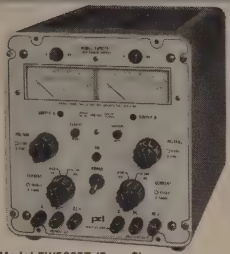
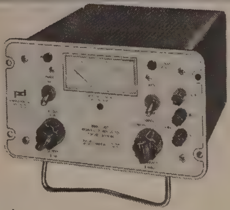
LABORATORY/MODULAR POWER SUPPLIES

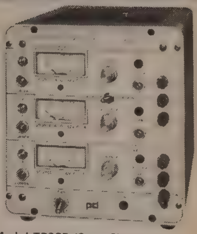
Model 5015T (Case B)
5¾″ w x 8⅝″ h x 10⅞″ d



Model TW5005T (Case C)
7¾″ w x 8⅝″ h x 13½″ d



Model 5005T (Case A)
8⅜″ w x 4¾″ h x 9″ d



Model TP325 (Case C)
7¾″ w x 8⅝″ h x 13½″ d

• Laboratory workhorse power supplies with over 12 years of field history • Continuously adjustable voltage, current or current limiting controls with limiter or current mode indicating lamps • No RFI generating SCR or switching circuits • Modular package construction suitable for bench or rack mounting • Processed under a "Predictable Reliability" Program for 5-year minimum operation to published specifications. This program features: Avalanche-controlled rectifiers, 100% stress testing of transistors, pre-aged zener references with maximum I/F noise specifications, computer grade capacitors, low T.C. 1% tin oxide film resistors in critical circuits, etc. • Supplies are burned in under full load for a minimum of 50 hours prior to test.

Uniply®

A Laboratory of Power Supplies in a Single Package

The UNIPLY® principle involves a regulator technique that provides a general purpose power source functionally replacing four conventional power supplies.

The regulator system comprises a number of unregulated DC sources, a number of power semiconductors selected for optimum voltage and current characteristics and a single control amplifier which selects through "OR" gates that combination of unregulated source and power semiconductors that satisfy the demands of the load and the panel control settings with minimum power supply losses.

Ranging is automatic and transient-free. Operation is electronic, without relays or manual switching and utilizes linear circuits only. No triacs, SCR's or switching circuits are employed.

A built-in front panel continuously adjustable overvoltage "crowbar" in conjunction with an inhibit switch limiting the automatic ranging to 6 volts provides completely safe operation with digital circuit loads. The UNIPLY® technique permits increased power supply capability with increasing AC line voltages. Up to 150% of panel ratings is available at line voltages over 105 volts. Useful output at reduced levels is available at line voltages as low as 85 volts. A flashing panel indicator signals loss of regulation if load demands exceed the regulator capability or AC input voltages are inadequate. Two voltage and current ranges are provided on the taut-band suspension panel meter to increase resolution. Ranges switch automatically with range switch setting.

Model 6050A: 0-7V at 5A / 0-15V at 3A / 0-25V at 2A / 0-60V at 1A *$229.00

SPECIFICATIONS

Input: 105-125 volts, 57-440 Hz, 100 watts nominal.

Line Regulation: 0.01% + 1 millivolt.

Load Regulation: 0.01% + 1 millivolt for load variations from 0-100% of rated output current.

Polarity: Either positive or negative output terminal may be operated at ground potential

Ripple and Noise: Less than 1 millivolt peak-to-peak.

Source Impedance: <0.005 Ω at DC, 0.1 Ω to 20 KHz, 1.0 to 1 MHz.

Recovery Time: Less than 50 microseconds to return to within a 15 millivolt band of the original voltage for a step change in rated load of 10% to 100% (1 microsecond rise time).

Stability: 0.02% +3 millivolts per 24 hours.

Operating Temperature: 0-50°C at full load. Storage: −20°C to +85°C.

Temperature Coefficient: 0.02% per degree C.

Current Limiting: Concentric switch/potentiometer provides continuous adjustment in two ranges: 0-500 milliamperes, 0-5 amperes.

Metering: Front panel taut-band meter and a selector switch permit monitoring voltage or current with an accuracy of ±3% of full scale. Voltage ranges 0-6V/0-60V change automatically with voltage range control. Current ranges 0-500 mA/0-5A change automatically with current range control.

Output Terminals: Front Panel: Three binding posts for positive, negative and ground.

Rear Panel: Seven terminal barrier strip for output voltage, sensing, voltage programming and parallel operation.

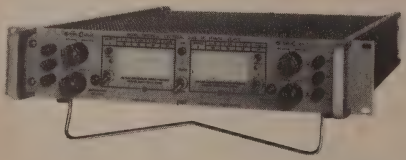
Dimensions: 8⅜" wide x 4¾" high x 11⁹⁄₁₆" deep.

Weight: 15½ lbs.

Overvoltage Crowbar: Built-in overvoltage crowbar adjustable from 2.0 V to 70 V from the front panel.

Model TW6050A: TWO MODEL 6050A SOURCES IN A 3-1/2" x 19" RACK MOUNTING PACKAGE *$449.00

More compact than two Model 6050A units, the Model TW6050A offers two independent sources which are electrically identical to the Model 6050A, but permit series operation to 120 V at 1 ampere or parallel operation to 7V at 10 amperes.



Model 6150: 0-7V at 15A / 0-15V at 7.5A 0-25V at 5A / 0-60V at 2A *$350.00

The Model 6150 offers more than twice the output power of the Model 6050A, with essentially the same electrical characteristics. Two taut-band meters are provided. Each instrument has two voltage and current ranges 0-6V/0-60V, 0-1.5A/0-15A. Ranges switch automatically with range switch setting. The Model 6150 mounts in a 19" rack, measures 3½" H x 16"D and is suitable for laboratory bench operation as well.

UNIQUE REGULATOR CONCEPT FEATURES:

- Multi-range output with automatic electronic ranging
- Useful power output up to 150% of ratings at line voltages over 105 VAC
- Flashing light signals regulator inability to support increased power output levels
- Continuous operation into an overload or short circuit without damage
- Four range, taut-band panel meter
- Front panel adjustable overvoltage crowbar
- Performance of a high quality regulated DC source: .01% regulation, 1 mv peak-to-peak noise and ripple, etc.

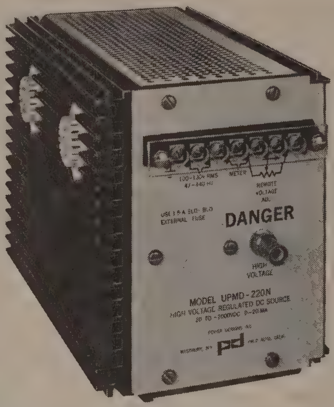
MODULAR HIGH VOLTAGE PRECISION POWER SOURCES



10-2000 VDC, 0-20 MA
10-3000 VDC, 0-10 MA
10-5000 VDC, 0-5 MA

The UPMD series of high voltage sources are compact modular units designed for critical applications where high stability, low noise and flexibility of output voltage control are important considerations.

They are ideal for such applications as photomultipliers, Geiger-Muller counters, proportional detectors, CRT sources, high resolution video displays, electrostatic lenses, etc.

Remote control of the high voltage output is achieved by means of an external potentiometer operating at low potentials with respect to ground. Output voltage resolution is a function of the resolution of this control. Options are available for remote voltage control at any desired input/output voltage ratio or for digital operation with an external D/A converter.

A unique overvoltage/arc suppression system is incorporated to protect the supply and its load in the event of loss of output voltage control or an overvoltage due to L di/dt transients generated by sustained load arcing. The circuit operates to clamp the output voltage to approximately 200 volts above any setting, hold this clamp for approximately two seconds and shutting down the supply electronically if the fault persists. The supply may be manually reset by momentary interruption of the AC line.

An internal 1% multiplier permits connection of an external meter for monitoring. A zener diode across the metering terminals minimizes shock hazard.

The compact size (4½″ x 6″ x 7½″), excluding the high voltage connector and light weight (8 lbs.) is achieved through the use of high frequency inverter technology in conjunction with a fast series regulator. RFI and EMI is held to low levels through the use of careful shielding and low pass AC line and DC output filters.

High voltage transformers and high voltage components encapsulated in readily replaceable epoxy modules. Low voltage components are accessible on epoxy coated PC boards.

An SHV (Safety High Voltage) BNC receptacle is utilized for the output voltage. A mating connector is furnished with each unit.

Characteristics

INPUT: 105-125 V, 47-440 Hz, 60 w (115 V line)

OUTPUT: See Table

REGULATION: .001% or 10 MV (whichever is greater), for line or load variations.

NOISE AND RIPPLE: 10 MV peak-to-peak to 1 MHz

STABILITY: Less than .01% or 15 MV (whichever is greater)

TEMPERATURE: 0-50°C

TEMPERATURE COEFFICIENT: Less than 50 PPM/°C

PROTECTION: Current limiter and overvoltage system limits output to safe levels.

SIZE: 4½″ x 6″ x 7½″

WEIGHT: 8 lbs.

MOUNTING: In any plane

TECHNICAL DATA

*NIM POWER SOURCES

***Per TID-20893, Rv. 4, Dtd JULY 1974, "STD. NUCLEAR INSTRUMENT MODULES"**

BIN POWER SOURCES

AEC-320-5A

The Model AEC-320-5A conforms to the requirements for a Type 1, Class A nuclear instrument modules bin power supply per TID-20893 (Rev. 4).

Plus... no power derating is necessary in this unit which can supply a full 96 va instead of the 72 va maximum rating of the specification.

Power input and output routing connectors permit interbin bussing of voltages not available in the power supply. An internal connector permits the field addition or removal of the routing connector assembly making it available as an option.

The Model AEC-320-5A provides four regulated outputs: ±12VDC at two amperes each and ±24VDC at 1 ampere each.

Special discounts are available to AEC laboratories, cost contractors and research and educational institutions.

AEC-320-7

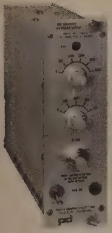
The Power Designs Model AEC-320-7 conforms to the requirements of a Type IV Bin Power Supply per TID-20893 (Rev. 4).

It provides three regulated outputs: ±6VDC at 10 amperes from either source and +12VDC at one ampere, with a maximum supply output rating of 72 VA. Built-in over-voltage crowbar circuits protect modules against damage.

Power input and output routing connectors permit interbin bussing of voltages not available in the power supply. An internal connector permits the field addition or removal of the routing connector assembly making it available as an option.

The Model AEC-320-7 is manufactured to the high quality standards demanded by on-line nuclear instrumentation. Discounts are available to AEC laboratories, cost contractors, research and educational institutions.

HIGH VOLTAGE PHOTOMULTIPLIER AND SOLID STATE DETECTOR SOURCES



MODEL AEC-315B

10-3000 VDC 0-10 MA

The Model AEC-315B is a calibrated high voltage power supply designed for use with photomultiplier systems requiring a high stability, low noise, well regulated power source. It mounts in a standard 8¾″ NIM Bin, and occupies two module widths. It is supplied with an integral three-wire power cord and NEMA plug and does not use the NIM Bin Power Supply.

Input: 103-129 VAC, 47-440 Hz, 65 watts

Calibration Accuracy: 0.25% of the dial settings from 500-3000 volts.

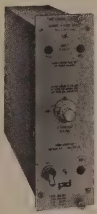
Resolution: 50 millivolts (10-turn vernier potentiometer with 100 volt range).

Noise and Ripple: 3 millivolts peak-to-peak to 15 MHz.

Regulation: .001% or 3 millivolts, whichever is greater, for line or load variations.

Stability: Drift is less than 100 PPM or 10 millivolts per hour, whichever is greater.

***$390.00**



MODEL AEC-1000

0-3000 VDC 0-1.0 MA

The Model AEC-1000 is a continuously adjustable, calibrated 0-3000 VDC power source designed for solid state nuclear detector applications where extremely low noise levels are necessary to avoid degradation of timing and energy level resolution. The high voltage output is guarded against stray fields and isolated from chassis to minimize ground loop and common mode noise.

Input: ±24 VDC, 200 mA, ±12 VDC, 35 mA derived from a standard Type 1, NIM Bin Power Source.

Regulation: Better than one ppm for input voltage variations (with a Type 1, Class A power supply) and better than 10 ppm/100 μA load change.

Noise and Ripple: Less than one mV peak-to-peak to 50 MHz. Linear circuits are used in the high voltage generating system.

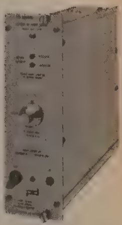
Calibration: 10-turn direct reading dial with an accuracy of better than 1% of maximum output voltage.

Stability: Output voltage drift is less than 50 ppm per hour and less than 200 ppm per day at constant load and ambient temperature after one hour warm-up.

***$375.00**

0-5000 VDC 0-0.5 MA

The Model AEC-5000 is a high voltage calibrated modular power source for operation with high resolution solid state detectors where low noise and stability is a prime consideration. The instrument occupies two module widths in a standard NIM Bin and operates from the ±24 VDC sources provided by the Bin power supply.



MODEL AEC-5000

Input: ±24 VDC, 165 MA for 100 μA output, 250 MA for 500 μA output derived from a standard Type 1 NIM Bin Power Supply.

Regulation: Better than one ppm for input voltage variations and better than 10 ppm/100μA load change.

Noise and Ripple: Less than one mV peak-to-peak to 50 MHz.

Calibration: 10-turn direct reading dial with an accuracy of better than 1% of maximum output voltage.

Stability: Output voltage drift is less than 50 ppm per hour and less than 200 ppm per day.

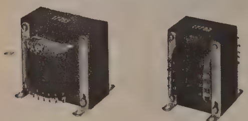
From $15

SM SERIES Sub-Modular DC power supplies function as building-block power components for user in-house assembly of power supplies or custom requirements. 10 basic power packages, with 60 models to choose from — 1.2V to 30V, up to 75A. **FEATURES:** Built-in rectifier, filter, regulator, OVP • Adjustable voltage, current limit, OVP • Logic inhibit function • Remote sensing and programming • Computer-grade capacitors • UL recognized

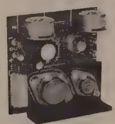
Contact factory

PK SERIES SM Series sub-modular power supplies combined with a single or multiple output transformer provide an almost unlimited variety of multiple output systems in power assembly kits. **FEATURES:** Minimum number of components • Completely engineered, tested, and documented • Maximum form factor flexibility • Easily spared and maintained • Sub-modules and transformer are only components • Minimal assembly costs



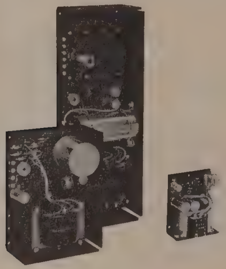
From $15

PT SERIES Power transformers provided with multi-tapped primaries and secondaries, each capable of powering any one of six SM Series sub-modules within the series for which it is rated. 60 different outputs available from 7 basic package sizes. **FEATURES:** 47-440 Hz operation • Low interwinding capacitance, primary to secondaries • Electrostatic shielding • Highest grade commercial materials used throughout • Lower cost than custom designs • Off-the-shelf delivery



From $16.95

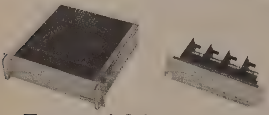
DCR SERIES Complete DC voltage regulators designed for use in custom DC power supplies or as point of load regulators in industrial or commercial OEM applications. For regulation of voltages up to 24 VDC and currents up to 12 amps.
FEATURES: 90/180 watt power rating • 6 models available in one mini-package size • Variable voltage output offers exceptional versatility • Excellent power/cost ratios • No external components required



From $24.95

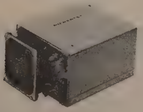
NEW EXPANDED LINE

OEM II SERIES The all-new second generation open-frame series regulated DC power supplies offering a total of 6 new packages and 54 new models. For a wide range of low and high power requirements, 70 different single outputs are available in 10 basic sizes. For analog and digital circuit requirements, there are 24 multiple output models to choose from, including 6 different packages and both dual and triple output configurations.
FEATURES: IC regulated design • Remote sensing and programming • Computer Grade capacitors • Adjustable current limiting • Metal film resistors • All hermetic semiconductors • 100% computer tested • Multi outputs fully isolated and interconnectable in any positive/negative configuration • Off-the-shelf delivery



From $60

PRA SERIES Rack Adapters in rugged all-steel frame construction with brushed aluminum front panels and handles. Unique interpanel configuration will accept almost any combination of single and multiple output OEM Series power supplies. **FEATURES:** Depths of 14", 17.5", and 21". • Standard 5¼" x 19" rack compatible • Hole pattern for standard 4½" fan • Input/output terminal strip hole patterns

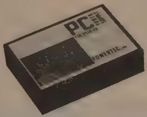


$695

SS SERIES Super Switchers incorporating transistor switching power supply design. Up to 24 V, up to 120 A. High efficiency enables size and weight improvement over present series regulator, SCR and phase control techniques. **FEATURES:** Over 3 years field proven • Efficiency up to 80% • Weight 15 lbs • 48-hour burn in • Logic inhibit function • Parallel operation of up to 5 units • High thruput fan, cooler operation • "Motherboard" eliminates cable harnessing • Delivery from stock

From $145

CR SERIES SCR regulated DC power modules for brute force applications at lowest possible cost. Up to 50V, up to 24A, with wide range adjustable output.
FEATURES: New simplified design • Variable outputs, 12 to 50 VDC • Open chassis with rugged, reliable construction • Top quality components throughout • Efficiency exceeding 75%

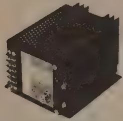


From $25

PC SERIES Fixed DC voltage card-mounted power supplies offering high performance and proven reliability in 12 miniature encapsulated models. Ideally suited for linear and digital IC applications.
FEATURES: Single or dual output models • Output ratings from 5 to 24 VDC • Current ratings from 50 mA to 1000 mA • Card mountable • Rugged construction • Low cost • Versatile design for wide application

From $49

XR SERIES Low-profile regulated DC power modules in single, dual, and wide range output models. 36 different outputs are available from three basic case sizes—up to 36V, up to 3A.
FEATURES: Highest grade military and computer components throughout • Main frame, peripheral, and instrument and test equipment rated • Fully adjustable and Nixie® models • Series regulated modular design • Built-in OVP

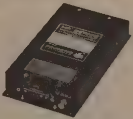


From $120

SR SERIES High-temperature rated, series regulated DC power modules provide outstanding power/cost ratios. 32 different outputs are available in four basic case sizes.
FEATURES: Up to 28V, up to 35A • Modular design, rugged construction • Built-in OVP • Main frame, peripheral, instrument and test equipment rated • 55°C rated • Highest grade components throughout

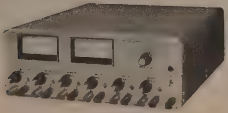
From $495

SX SERIES Series regulated DC power supplies in two full-rack mountable power packages—3½" and 5¼" high. 15 different models to choose from—up to 28 V, up to 120 A.
FEATURES: 115/208/230 VAC input • Master/slave operation of up to 3 units • Logic inhibit function • OVP and thermal overload protection • Remote programming • Fully metered output voltage and current



From $475

HP SERIES Militarized series regulated DC power modules designed to meet airborne specifications. Units are flat pack modular design for airborne applications.
FEATURES: Up to 28 V, up to 120 A • 30 different models • No switching spikes or RFI problems • Excellent power/cost ratios • Maximum power density up to 5 watts/in^3



From $295

LAB SERIES Single, triple and six output models with high power density, maximum convenience and versatility in a portable and attractive package.
FEATURES: R and D precision and accuracy • Small size, low weight • Least dollars per watt for lab supply • Self-locking bail bar, all models • Proven design for reliable performance

From $195

SMI SERIES DC-AC Inverter power systems providing custom power performance at standard off-the-shelf prices. May be used as a completely self-contained unit or as a "building block" for a complete DC to DC converter system. **FEATURES:** 3 power packages—150, 300, and 600 W outputs • 9 different models • Wide input range, nominal 24, 48 or 120 VDC input • Single or multiple outputs • Switching regulator for high efficiency • Modular design for high reliability • 500 Hz square wave output

5 year warranty

20kHz 'switchers'

with a five year warranty
now from the leader in *reliable* **20kHz switching power supplies**

This increase in warranty coverage is offered because of the success we have enjoyed in producing in excess of 25,000 SWITCHERS at a very low failure rate. It is proof of the confidence we have in our proven designs and production techniques. Extensive in-process quality control and 100% burn-in practically eliminates infant mortality, thus guaranteeing you long trouble-free operation.

Please consult the manufacturers' directory section for a listing of our sales representatives offices.

Call or write for our complete catalog which includes the informative article, "The Principles and Facts About Switching Power Supplies."

OVER 100,000 STRONG

Every month over 100,000 buyers and specifiers like yourself receive Electronic Products Magazine . . . that makes us the largest electronics magazine around. And we're the largest for a darn good reason . . . we give you what you need: a practical editorial approach . . . one that's application and new product oriented. Editorial that offers solutions to the problems you face in your everyday task of designing and building electronic systems and subassemblies. The type of information you can put to use now.

If you're not getting EPM . . . why not write our circulation manager for a qualification form and join the over 100,000 strong.

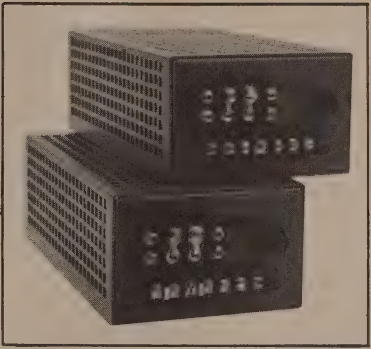
SORENSEN POWER SUPPLIES

more reliability,
more performance,
more selection — from stock

676 ISLAND POND RD.,
MANCHESTER, N. H. 03103
TEL: (603) 668-4500 TWX: 710-220-1339

STM SERIES



These modular power supplies utilize advanced switching techniques to achieve high power outputs from small volume. They're favorably priced with excellent performance features, including a low temperature coefficient, low drift and ripple, and fine regulation. Computer-optimized input/output filtering for RFI performance closely approximates MIL-STD-461A.

Common Specifications:

Efficiency: to 75%

Volume: 160 in ^{3} for Module III:
238 in^3 for Module IIIA,
352 in^3 for Module IVA,
518.5 in^3 for Module VI.

Stability: .05% for 24 hours after warmup

Temperature Coefficient: .01% per °C

RFI: Minimized through computer-optimized input/output filtering. Meets most portions of MIL-STD 461A for both narrowband and broadband interference. Surpasses performance of conventional regulators. See representative test data below.

Transient Response: 1 millisecond for half-load to full-load change and return to a one-percent band.

Resolution: .05% V_{out} max

Adjustable Built-in Overvoltage Protection: All models.

Automatic Current Limiting: Adjustable from 50 to 125% rated full-load current.

Temperature Range: Operating: 0° to 71°C
Storage: −40° to +85°C

Programming: Resistance ≡ 1000 Ω/V
Signal ≡ Volt/Volt

Series Operation: to 200 Vdc

Turn on/off Overshoots: None

Isolation: 1300 Vdc, Input to Chassis
500 Vdc, Output to Chassis

Output Impedance (typical):
.005Ω at 10 kHz
.01Ω at 50 kHz
.015Ω at 100 kHz
.02Ω at 500 kHz

Fall Out: Will provide full output at regulated voltage for 15 milliseconds following removal of nominal input power, half output for 30 milliseconds.

Voltage Regulation (comb. line and load): .05%

Ripple (p—p): 50 mV (Worst case. Typically less than 30 mV)

Input Power: Vac: 105—132
Freq. (Hz): 50-440
Vdc: 150±15%

Electrical Specifications:

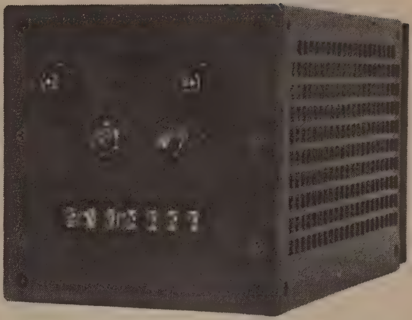
SORENSEN PTM SERIES

SINGLE AND DUAL OUTPUT MODULAR POWER SUPPLIES

Excellent space saving over competitive models is offered with the PTM series-pass regulated DC power supplies. These rugged units are designed to deliver outstanding power per cubic inch at suprisingly modest cost. Quality components and material are used in each PTM, including computer-grade capacitors, ceramic, hermetically sealed plug-in IC's; plug-in power transistors; grain-oriented steel transformer laminations; bridge rectifier package. Convection cooling allows complete mounting flexibility. All models feature as standard built-in over-voltage protection.



Common Specifications:

	PTM Single	PTM Dual
Voltage Regulation (line and load comb.)	0.05% + 5 mV	0.02%
Voltage Ripple (PARD)[1]	1 mV rms, 5 mV peak-to-peak	
Temperature Coefficient .	0.01%/°C or 1 mV/°C whichever is greater	
Transient Response Time	50 μsec (for changes in load between 10-100% and 100-10% to recover to ±20 mV band)	
Tracking Accuracy	Adjustable to	0.2%
Drift (24 hours)	0.1% after 1 hour warmup	
Remote Programming ...	500 ohms/volt	500 ohms/volt
Remote Sensing	250 mV max. drop in each leg	
Power Factor (Typical) ...	80%	80%
Operating Temperature ..	0°C to 71°C	0°C to 71°C
Storage Temperature	−40°C to +85°C	−40°C to +85°C
Finish	Textured blue thermal paint	
Cooling	Convection	Convection

Current Foldback

PTM SINGLE — Automatic, adjustable; 50-130% of rated current; factory-set to 125% of rated (40°C) output current.

PTM DUAL — Automatic, adjustable; factory-set to 125% of rated (40°C) output current.

Overvoltage Protection

PTM SINGLE — Automatic, adjustable crowbar action; response time 100μsec typ. to avoid nuisance tripping.

PTM DUAL - DC outputs are protected from an overvoltage condition by an internally adjustable protection circuit. The outputs are sensed separately and in the event of an overvoltage condition in either output, both outputs are shorted by an internal SCR within 50 μsec. The SCR shorts the positive output to the negative output. This feature together with built-in reverse-polarity diodes on each output effectively keeps the outputs within 2.5 volts of the common after an OVP trip. The circuit is designed to tolerate the OVP tripped condition indefinitely.

NOTES:

(1) PARD — The "Periodic and Random Deviation" of the output power from its average value, with all external operational and environmental parameters maintained constant.

(2) 132 VAC at 20% reduced rating, reduce linearly from 125 VAC.

Module Package PTM Dual	Size (in.) H	W	L	Weight (lbs)	Input Power at 1ϕ 50-440 Hz AC volts/AC amps

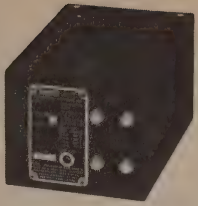
SORENSEN QSA SERIES

Modular, Wide-Range, Convection-Cooled DC Power Supplies



Sorensen's QSA Series modular power supplies are U.L. listed and feature excellent regulation, ripple and response-time characteristics. The 22 models in the series provide 3-330 volts and up to 150 watts output.

A complete line of accessories — metered panels, rack adapters, chassis slides, filler panels, and overvoltage protectors — are available for the QSA Series. Thus, you can build your own multi-output system, or Sorensen can do it for you.

Electrical Specifications:

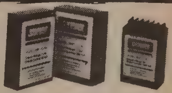
NOTES:

(1) With load change (NL-to-FL or FL-to-NL) and line-voltage change (±10%) combined.
(2) Whichever is greater.

MMT, MMS, MMD AND CMS, CMD SERIES



Compact, ultra-reliable units specifically designed to provide excellent regulation at a modest cost. Typical applications include drivers for displays, linear IC's reed relays, dynamic and static shift registers, ROM's RAM's, plus D/A and A/D converters. All units are fully warranted for a 24-month period.

COMMON DATA — ALL MMT, MMS, MMD UNITS

Short Circuit Protection: Internal current limiting. **Overvoltage Protection:** Standard on Model MMS5-1.00 and MMS5-.500 — Should the output voltage exceed 6.8 volts, crowbar operates to reduce the output voltage. **Operating Temperature:** −25°C to +71°C. **Storage Temperature:** −25°C to +85°C.

COMMON DATA — ALL CMD, CMS UNITS

Chassis-mounted encapsulated power supplies. **Output Impedance:** 0.2Ω @ 10 KHz. **Ripple and Noise:** 2.0 mV rms. **Temperature Coefficient:** 0.02%/°C. **Operating Temperature Range:** −25°C to +71°C. **Storage Temperature:** −25°C to +85°C. **Input Voltage:** 115 ±10[4] Vac. **Input Frequency:** 50-400 Hz. **Setpoint Accuracy:** ±2.0%.

NOTES:

*220/230 Vac available at extra cost. [1]Overvoltage protection standard. [2]Does not require derating until 60°C. [3]Derating begins at 50°C. [4]220/230 Vac available; Add $5 to unit price.

TEL: (603) 668-4500 • TWX: 710-220-1339

Common Specifications:

Constant Voltage Ripple (PARD): 300 microvolts rms (3 miliovolts peak to peak).

Remote Sensing: 1.5 volts drop maximum per load lead.

Overload/Short Circuit Protection: Current foldback (current limiting for 10-volt models).

Overvoltage Protection (Optional): Should the output voltage tend to exceed the adjustable overvoltage trip level, a sensing/SCR crowbar circuit operates in 10 microseconds to reduce the output voltage to 2.5Vdc or less (see Optional Overvoltage Protection column in table).

Series Operation: Two units may be operated in series (10-volt models may be operated in series up to a total output of 200 volts).

Parallel Operation: Four units may be operated in parallel.

Drift: 0.025%/8 hours (after 30-minute warmup) with constant line, load and ambient temperature.

Remote Prog.: 1V/V

Input Power: 105-125V, 200-240V, 210-250V single phase, 47-440Hz

Operating Temperature Range: 0°C to +71°C

Storage Temperature Range: −40°C to +85°C (with VP)

Output Floating: Either side of the output may be grounded.

Cooling: Convection.

Isolation Voltage: 1000Vdc — input; 700 Vdc — output.

Finish: Case is finished in black wrinkle paint.

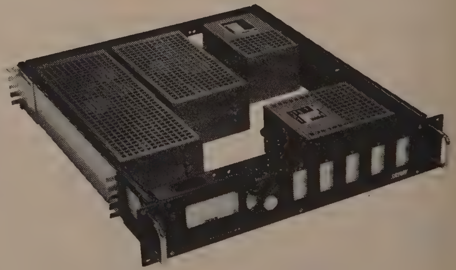
(3) To return to ±10mV band for a step-load change of NL-to-FL or FL-to-NL.
(4) To return to ±15mV for a step-load change of NL-to-FL or FL-to-NL.
(5) To return to ±20mV for a step-load change of NL-to-FL or FL-to-NL.

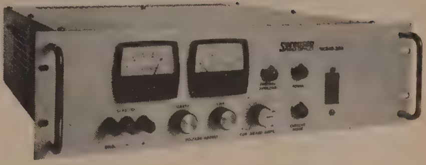
MULTI-OUTPUT RACK SYSTEMS



Sorensen rack assemblies offer a standard 19-inch width, two heights, three depths and are supplied both with and without slide adapters and with or without metering. Quarter-rack and full-rack metering schemes are available.

Any of Sorensen's modular power supplies may be inserted into single- or multiple-output rack systems. These modulars include the high-efficiency STM Series (40 models), the PTM's (singles and duals), the high-performance QSA Series and the encapsulated MMS, MMD, CMS and CMD Series.

SORENSEN DCR-A&B SERIES



The DCR series satisfies today's need for precision or general purpose power supplies from 400 to 20,000 watts. They feature voltage and current regulation, high efficiences, remote signal or resistance programming, and remote sensing to 200 feet. All silicon, solid state design is used throughout.

Common Specifications (except as noted)

Resolution (voltage): 0.05% of E_0 max. (typical)

Resolution (current): 0.5% (DCR-A) 0.05% (DCR-B), typical

Remote sensing: Max. drop per load lead 3V (DCR-A), 8V (DCR-B)

Overload/short circuit protection: Adjustable. Current limiting with automatic recovery.

Series operation: To 200 Vdc max. (150 and 300V models — 2 in series)

Parallel operation: Master-slave, 4 units max.

Operating temperature range: 0°C to +71°C

Storage temperature: +40°C to +85°C

Isolation voltage: 1000 Vdc input to output

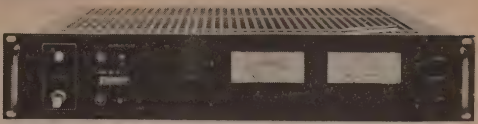
SORENSEN SRL SERIES



Instant front panel monitoring and adjustment of overvoltage set point without removing the load are just two of the unique features of Sorensen's new SRL Series of solid-state DC regulated power supplies.

Other user-oriented features include higher power density (watts/cu.in.), operation to 71°C, and designed-in reliability through the use of integrated circuits. These features, combined with traditional Sorensen quality, make the competitively priced SRL Series an ideal choice for medium power, low voltage systems and laboratory applications.

Model	Output Power				Constant Voltage Mode					Constant Current Mode

ACR SERIES

The solid state ACR series of AC line voltage regulators offers outstanding power, performance, and packaging. They are ideal for controlling the RMS voltage to a wide variety of loads requiring precision regulation, fast response time, and low distortion. They are one-half the size and weight of competitive regulators.

	Output Power*		Voltage Regulation		Response Time	Temp. Coeff.	Input Power			% Efficiency	List Price (U.S.A)

*ACR units may be connected in multiple to supply regulated three phase power (Write for Application Note AC 701).

Specifications:

- **Remote Programming:** 10 ohms per volt (Typ.)
- **Remote Sensing:** All models 1.5 volts drop maximum per load lead.
- **Input Power Factor (Typical):** 0.75
- **RFI:** Meets MIL-I-26600 specifications for Class III equipment.

Notes:

1. The speed to recover to 63% of the peak deviation of the transient caused by maximum line or load changes. Complete recovery may be from 1 to 8 cycles, depending on the magnitude of line or load change or up to 10 cycles for a simultaneous combination of worst-case line and load changes.
2. May be operated from 47 to 53 Hz or 57-63 Hz. All units are factory adjusted for optimum 60 Hz performance and may be readjusted for optimum 50 Hz performance.

- **Remote Sensing:** 1 volt per load lead (maximum allowable)
- **Series Operation:** Up to 200 Vdc output maximum
- **Parallel Operation:** 3 units maximum in parallel
- **Operating Temperature Range:** 0°C to 71°C
- **Storage Temperature:** −40°C to +85°C
- **Isolation voltage to Ground:** 1000 Vdc input; 200 Vdc output
- **RFI:** MIL-I-6181D
- **Output Voltage Turn-On/Turn-Off Overshoot:** None
- **Output Current Turn-On/Turn-Off Overshoot:** None
- **Overload/Short Circuit Protection:** Crossover to current mode or crossover to voltage mode
- **Overvoltage Protection:** 10 microsecond crowbar
- **Finish:** Case is finished in black semi-gloss baked enamel; front panel is finished in black semi-gloss enamel / white lettering.
- **Programming:** Adjustable resistance and voltage (gain) programming constants. Complete details are in Sorensen's Performance Note PAN-1.

NOTES:

1. With load change (NL to FL or FL to NL) and line voltage change (±10%) combined.
2. Whichever is greater.
3. At full compliance voltage.
4. For 8 hours (after 30 min. warmup) with constant line, load and ambient temperature.
5. To return to a bandwidth of ±10mV for a step load change of NL to FL or FL to NL.
6. Standard model has 105-125 Vac input. Models with M1 suffix (example SRL10-50 M1) have 190-230 Vac input. Models with M2 suffix (example SRL10-50 M2) have 210-250 Vac input.
7. Models SRL40-50 and SRL60-35 have 190-230 Vac input. Models SRL40-50 M2 and SRL60-35 M2 have 210-250 Vac input.
8. Voltage-mode constants are factory selected. They may be altered at rear terminal board.

DAP SERIES

High Speed D-to-A Programmers

Directly Addressable / 10-Bit Accuracy / Data Storage / Photo-Isolation (1500 Vdc) / Deglitcher / High Speed (less than 25μs) / Programmable Shutdown / Data-Acknowledge Signal to Computer (flag)

Automatic test systems and process-control equipment are the primary applications of this new series of digital-to-analog programmers (DAP's). The programmer converts the output of all forms of digital devices to the analog signals required to program Sorensen's power supplies.

DC POWER SUPPLIES — REGULATED

QRD SERIES

General laboratory instruments featuring excellent voltage and current regulation, low noise and ripple, and high-speed programmability. Seven models from 30 to 90 watts, 15 to 60 volts, full range. Accessories include overvoltage protectors, rack adapters and calibrated ten-turn voltage and current controls.

OVERVOLTAGE PROTECTORS

OVP SERIES

Modular overvoltage protectors designed specifically for integrated and discrete solid state circuits and other voltage sensitive loads. Provides constant output voltage monitoring of solid state comparator signal, fast response SCR crowbar that triggers when voltage exceeds preset trip level.

Write or call today for your free copy of the informative Sorensen full line catalog. Sorensen Co., 676 Island Pond Road, Manchester, New Hampshire 03103.

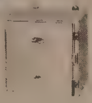
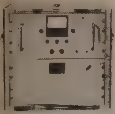
STABILINE® automatic VOLTAGE REGULATORS

TYPE IES9101



TYPE EMT10228



TYPE EMT4115B

Deliver a constant output voltage regardless of variations in input voltage or changes in line current. Types available from 0.25 to 275 kva. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input range shifts with output voltage setting.

EMT SERIES – Electro Mechanical Transistorized types with virtually zero waveform distortion, 47-63 hertz frequency range, very low internal impedance, negligible phase shift and efficiency approximately 99%. Rated accuracy ±.75% for all line voltage or load current variations within unit stated range. Insensitive to load magnitude and power factor; no effect on system power factor.

EMS SERIES – Electro Mechanical Transistorized types for heavier load requirements. Same operating characteristics as EMT Series. Units with letter I before first digit in type number have individual control for each line-to-neutral voltage.

EMK SERIES – Electro Mechanical Transistorized types providing faster correction times than other electromechanical models.

IES SERIES – Instantaneous Electronic Solid-State types having extremely fast correction, no moving parts. Will maintain output voltage within a 100 millivolt rms band for any combination of rated input voltage and/or load from 1.0 to 0 power factor lagging. Efficiency to 95%. All units have provision for remote sensing and have plug-in solid-state circuit boards.

MILITARIZED – Meet requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½"; type EM4108MCR fits standard 19" relay rack. Accuracy ±1.0%.

▲At 400 Hertz
†Also available as rack model (suffix R when ordering).
¶For 60 Hertz operation only.
*Can also be operated on an input range of 95 to 135 volts with a rating of 57 amperes, 6.6 kva and a correction rate of 0.075 seconds per volt
§Also available as rack (suffix R when ordering) or wall mounted (suffix W when ordering) models.
‡Unit can be converted for 208 volt operation by simple tap changes. Input and output voltage ranges change proportionally.
**At nominal output. Shifts with output voltage setting but not proportionally.
††Also available in open construction (suffix U) and with screened and enclosed (suffix UT) construction.
‡‡At nominal output. Shifts proportionally with output voltage setting

STABILINE®

Full Range REGULATOR CONTROLLERS

Designed for use with any motor-driven POWERSTAT Variable Transformer to provide full range regulation of a-c voltage, a-c current or d-c voltage. Output voltage will remain within a 2-volt band when used with 120 volt units and a 4-volt band when used with 240 volt models. Output current can be maintained within ±1% of maximum current setting with user supplied current transformer and Superior Electric transformer T6340. Type FR501DC and user supplied d-c power will provide regulated d-c voltage.

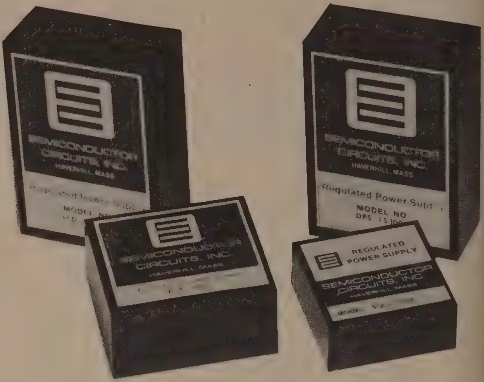
Low Cost Miniature Power Supplys with Better than Average Performance

- **SHORT CIRCUIT PROTECTED**
- **NO DERATING THROUGH +71°C**
- **MTBF 150,000 HOURS AT 25°C**



SEMICONDUCTOR CIRCUITS, INC.
HAVERHILL, MASS
Regulated Power Supply
MODEL NO
DPS
REGULATED POWER SUPPLY

The SQ, P741, DPS and LCD Series units are designed and manufactured using the same techniques utilized in the manufacture of the P and SP5900 Series units described on page 7. These units are ideally suited to applications not requiring tight line and load regulation.

GENERAL SPECIFICATIONS

INPUT VOLTAGE AND FREQUENCY
105 to 125 Vac — 50 to 440 Hz

OUTPUT VOLTAGE TOLERANCE
1% (Fixed); +4%, -1% on 5V @ 200 mA Models

RIPPLE AND NOISE (PARD)
1 mV RMS

OPERATING TEMPERATURE RANGE
-25°C to +71°C (No Derating)

STORAGE TEMPERATURE RANGE
-25°C to +85°C

Industry Standard, High Performance & Militarized Power Supplys

- **REGULATION TO 0.01%**
- **FULL OPERATION UP TO 85°C (M OPTION)**
- **MTBF > 150,000 HOURS**

The **P and SP5900 Series** of high performance modular encapsulated power supplys are the standard of the industry with a proven record in the field since 1968. Continuous design improvements with respect to magnetics and regulator circuitry have led to an increased reliability (MTBF), a lower case temperature rise (up to 18°C cooler than other manufacturers units), and highest actual performance. The Militarized version (Suffix M) of these units is designed to meet the more demanding temperature, humidity and vibration requirements of military and critical industrial applications. These units include hermetically sealed components and tantalum capacitors for full rated operation through +85°C.

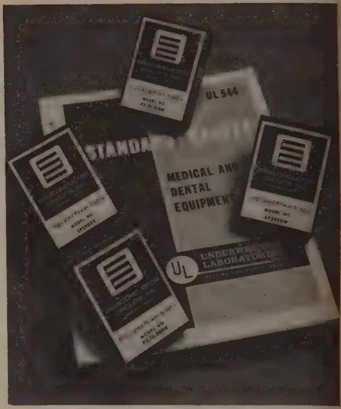
Power Supplys Recognized Under UL 544C Standard For Safety — Medical & Dental Equipment

UL544C

- **PATIENT CONTACT RATED (W OPTION)**
- **2500 VOLT BREAKDOWN**
- **<10μ AMP LEAKAGE (W OPTION)**
- **FARADAY SHIELDED TRANSFORMERS**



These units have met the "Standard for Safety" for Medical and Dental Equipment, as established under UL 544C for patient contact and hazardous location applications by Underwriters Laboratories, Inc. and are recognized as such under the U.L. Component Recognition Program, File E50975. Patient Contact rating and Hazardous Location rating are designated by **SUFFIX** W and R, respectively.

The proper heat management of components has resulted in no internal "Hot Spots" that could adversely affect reliability. Effective transformer designs have resulted in achieving and surpassing the high voltage breakdown and low leakage current requirements necessary for patient protection. The above are just two factors that were considered with respect to patient safety.

Use of these modules eliminates the probability of rejection at the equipment level due to the power supply. Approval at the equipment level will be expedited. The real benefit comes once the product reaches the field. Because they operate more efficiently, these units dissipate less heat and are more reliable. This higher reliability and lower heat dissipation will result in a higher reliability of the overall equipment.

Chassis Mount and Bench Type Power Supplys

- **SMALLEST AVAILABLE**

The CM and LCM Series are designed to meet application requirements where compact size and chassis mounting are factors. These units are equivalent electrically to the **P Series** units described on page 7. The **LCM Series** is identical to the **CM Series** except that a six foot long, three conductor line cord is provided for AC power. In addition, two terminals located on the barrier strip are in series with the AC input and can be used to turn power on and off from a remotely located switch.

The LP Series units are high performance bench type power supplys electrically identical to the **P Series** units described on page 7. These units are ideal for laboratory use, especially when designing equipment that will house and be powered by an equivalent unit. They take up almost no room on a busy work bench, provide reliable high performance power and are equipped with a six foot long, three conductor line cord, as well as an ON/OFF switch located up front next to the binding posts.

High Performance Triple Output Power Supplys

- POWER FOR BOTH "A & D" OUTPUTS
- TRI-POWER OUTPUTS TO 6.75 WATTS
- NO DERATING UP THROUGH +71°C

The **MP Series** triple output power supplys are ideal for those applications where space (P.C. Board real estate) is limited. Three outputs are available in the same area that is normally occupied by most single or dual output encapsulated modules. These units take advantage of the same design and manufacturing techniques used in the high performance **P SERIES** described on page 7.

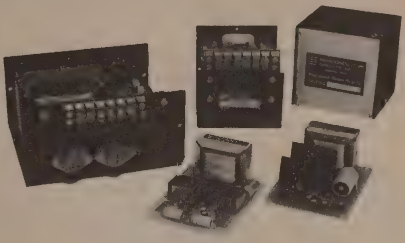
- **NO DERATING THROUGH +71°C**
- **FULL 5 YEAR WARRANTY**



The **PC, OF** and **C Series** power supplys are designed for general purpose applications requiring high performance at moderate prices. These series have a proven reliability, with up to six years of performance in the field.

GENERAL SPECIFICATIONS

INPUT VOLTAGE AND FREQUENCY
105 to 125 Vac – 50 to 440 Hz

OUTPUT VOLTAGE TOLERANCE
±1% (Fixed)

TEMPERATURE COEFFICIENT
0.02%/°C (typical)

OPERATING TEMPERATURE RANGE
-25°C to +71°C (No Derating)

STORAGE TEMPERATURE RANGE
-25°C to +85°C

SHORT CIRCUIT PROTECTION
Continuous

General Purpose Economy DC/DC Converters 3 to 20 Watts Output

RD, UD

- **EFFICIENCY TO 85%**
- **HIGH PERFORMANCE π INPUT FILTER**
- **SHORT CIRCUIT PROTECTED**

DC/DC CONVERTER
SEMICONDUCTOR CIRCUITS, INC.
MODEL RD48-5S1000
MODEL UD12-12D500
MODEL UD5-15D300

The RD Series DC/DC Converters are designed to meet most application requirements. They include a high performance π filter at the input to minimize input reflected ripple and use advanced techniques that reduce output noise current to less than 2.5mA (see page 13).

The UD Series DC/DC Converters include all of the features of the **RD Series** unit except that the output regulator is not provided. This series is economically priced and is ideal for applications where a stiff source of power is available. In addition, this series provides up to 20 watts of output power from a small package.

High Performance, Regulated DC/DC Converters 0.9 to 10 Watts Output

9C, 30C 50C, 100C

- **HIGHLY REGULATED FLOATING OUTPUTS**
- **EXTREMELY LOW OUTPUT NOISE**
- **HIGH PERFORMANCE π INPUT FILTER**

DC/DC CONVERTER
SEMICONDUCTOR CIRCUITS, INC.
MODEL 50C24—12D210
Regulated Power Supply
MODEL NO. 100C12 15D330
DC/DC CONVERTER
MODEL 9C24—15D30

The 30C, 50C and 100C Models are equipped with a high performance π filter at the input to minimize input reflected ripple. This series of high performance DC/DC converters is especially suited for use with circuitry that requires output noise to be at a minimum. In every DC/DC converter, noise in the form of a current source is generated during normal switching as the magnetic material changes state. Because of proprietary state-of-the-art design considerations, the output noise of the **30C, 50C** and **100C models** is <2 mA—more than 10 to 30 dB lower than other designs that are presently available (see page 13). In use, noise will be minimized, if a low impedance return exists between input common and output common, for those applications not requiring input to output isolation; conversely, noise will also be minimized in applications requiring isolation, if no return exists between input and output common.

OEM Design Capabilities, High Efficiency Modular Power Supplys and DC/DC Converters

BACKGROUND

Since 1966, Semiconductor Circuits, Inc., has been the largest producer of miniature power supply and DC/DC converter modules in the United States. During this period of time, SCI has developed many design innovations, which have become the standard within the industry. With over 350,000 units in operation throughout the world, SCI has the proven ability to design and manufacture products that pass the test of time in the field. As the number one manufacturer of these types of products, some of the innovations generated are as follows:

1967 ±15V at 50 and 100 mA card supply.
1968 a) ±15V at 200 mA card supply.
  b) 5V at 1 Amp card supply.
1969 a) ±15V at 100 mA encapsulated supply in a 2.5" x 3.5" x 0.875" module.
  b) 5V at 500 mA encapsulated supply in a 2.5" x 3.5" x 0.875" module.
1971 a) ±15V at 200 mA encapsulated supply in a 2.5" x 3.5" x 1.25" module.
  b) 5V at 1 Amp encapsulated supply in a 2.5" x 3.5" x 1.25" module.
1972 a) ±15V at 300 mA encapsulated supply in a 2.5" x 3.5" x 1.56" module.
  b) 5V at 2 Amps encapsulated supply in a 2.5" x 3.5" x 1.56" module.
  c) Logic Board compatible encapsulated DC to DC converters 1.5" x 2" x 0.4" and 2" x 2" x 0.4" modules.
  d) Multiple Output encapsulated supply in a 2.5" x 3.5" x 0.875" module.
1973 a) High efficiency Switching Regulators 24 Watts output in a 2.25" x 2.5" x 1.25" module.
  b) High efficiency DC/DC converters 1 Watt output in a 1" x 1" x 0.4" module.
1974 a) 5V at 2 Amp encapsulated supply in a 2.5" x 3.5" x 1.25" module.
  b) High efficiency DC/DC converters up to 20 Watts having up to a 2:1 input range.

SCI has the proven ability to design and manufacture reliable products for your specific application and production requirements. Before expending funds on power source development for use in your end product, contact SCI and allow us to propose the power system that best fits your needs. Your benefits will be a lower-per-unit cost and more time to adequately develop the unique portions of your equipment that will raise you above the competition. This combination can only result in a significant increase in the overall reliability and performance of your end products.

OEM CAPABILITIES DESCRIPTION

INPUT VOLTAGE
AC: 115 Vac; ±10, ±15, ±20 and ±25% Tolerance Ranges
Frequency 50 to 60, 50 to 440 and 47 to 440 Hz
DC: Min/max: 3 Vdc to 85 Vdc
Range: V nom ±5% to ±35% or up to a 2:1 Input Range

OUTPUT POWER
Up to 20 Watts Per Unit

EFFICIENCY
To 90%

OUTPUT VOLTAGE
Up to 1000 Vdc

OUTPUT CURRENT
Up to 7A

REGULATION
To 0.01% Line and Load

RIPPLE
To 1 mV RMS

OUTPUT VOLTAGE ACCURACY
Factory set at ±1% or ±2%

OUTPUT VOLTAGE VARIATION
Fixed, Trim Pin Variable or Potentiometer Adjustable

TEMPERATURE COEFFICIENT
To 0.005%/° C

CASE SIZES
2.5" x 3.5" x 1.25" for up to 12 Watts of Output
2.5" x 3.5" x 1.56" for up to 15 Watts of Output
2.5" x 3.5" x 2.0" for up to 20 Watts of Output

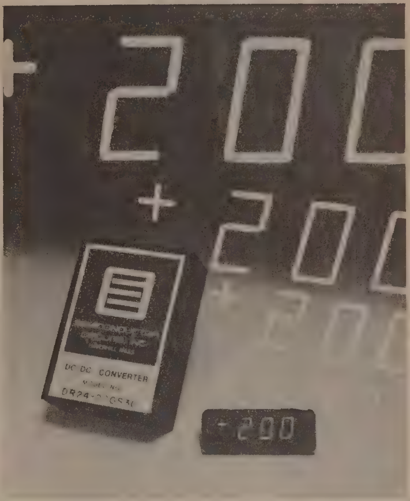
Plasma Digital Display Power Supplys and DC/DC Converters

- >75% EFFICIENCY
- UP TO 200% INPUT RANGE
- LOW CASE TEMPERATURE RISE



This family uses high efficiency techniques to develop a source of well regulated ionization voltage for plasma type digital displays. Models are available for AC inputs, as well as for regulated and unregulated sources of DC power.

GENERAL SPECIFICATIONS

OPERATING TEMPERATURE RANGE
-25°C to +71°C (No Derating)

STORAGE TEMPERATURE RANGE
-25°C to +85°C

CASE TEMPERATURE RISE
10 to 15°C above ambient

BLOCK DIAGRAM

The **E Series** power supplys use a high efficiency regulation technique. This design maintains nearly constant efficiency over the entire input voltage range. Less power is dissipated internally and the power supply runs cooler. The lower dissipation and cooler operation result in a higher overall system reliability. As an example, a conventional 5 Vdc output power supply dissipates 4 to 5 times as much power internally as would be dissipated by an equivalent **E Series** unit. These supplys offer line transient immunity not found in conventional power supply designs. The effects of line transients are significantly reduced by the low pass filter used within the high efficiency regulator.

This series of single output DC/DC converters uses proportional energy transfer high efficiency techniques that deliver a well regulated output voltage for applications requiring a wide input voltage range capability. This series is ideal for use in applications where the source of power is a battery or other source of poorly regulated DC power; such as a motor generator, a solar cell system or a fuel cell. Units can be configured into almost any form for OEM applications where size and shape are factors. Isolation can be provided **(DC Series)** or not provided **(DR and SW Series)** depending on the application. Input to output (I/O) isolation permits either output terminal to serve as the Output Common. This provides a simple method for obtaining positive or negative voltages from either input polarity.

Special Features

HIGHER REGULATION

Suffix "A" on a specific model number designates an improved Line and Load Regulation that is specified for the standard units as follows:

Standard Unit	Suffix "A"
Line Regulation	Line Regulation
0.01%	0.01%
0.05%	0.02%
Load Regulation	Load Regulation
0.05%	0.01%
0.1%	0.05%
0.2%	0.05%

CROWBAR OVERVOLTAGE PROTECTION

Suffix "C" on a specific model number designates a Crowbar Overvoltage Protection circuit. This feature applies to 5V output models, only, and is factory set at approximately 6.5 Vdc. Crowbar overvoltage protection is available for other voltages. The input should be fused when using overvoltage protection. For information, please consult factory.

COVER

Suffix "CVR" on a specific OF Series power supply designates that the unit is equipped with a metal dust cover. Covers are furnished as a standard part of the C Series units.

FOLDBACK OVERCURRENT PROTECTION

Suffix "FB" on a specific model number designates a supply having Foldback Overcurrent Protection rather than Current Limiting Overcurrent Protection. This feature is specifically suited for applications where short circuit conditions can occur for long periods of time.

FARADAY SHIELDED TRANSFORMER

Suffix "J" on a specific model number designates the supply is equipped with a Faraday Shielded transformer. This feature provides isolation of up to 1750 volts and a leakage current of less than 20μA at 60 Hz. The shield is available on pin 6. UL 544 Recognized Patient Contact rated models are equipped with a Faraday shield that provides isolation up to 2500 volts and a leakage current of less than 10μA at 60 Hz. The shield is connected to pin 2 internally.

200 to 252 Vac INPUT

Suffix "K" on a specific model number designates a power supply capable of operating from 200 to 252 Vac at 50 to 440 Hz. Operation to 264 Vac is also available. For further information, please consult the factory.

105 to 125/210 to 250 Vac INPUT

Suffix "K2" on a specific model number designates a power supply capable of operating from 105 to 125 Vac or 210 to 250 Vac at 50 to 440 Hz. Connection for either of these ranges is made via 4 AC input pins. For further information, please consult the factory.

MILITARIZED PM SERIES

Suffix "M" on a specific model number designates a power supply that has been ruggedized to meet the requirements of a more severe environment. Please refer to page 7 for additional information.

90 to 110 Vac INPUT

Suffix "N" on a specific model number designates a power supply capable of operating from 90 to 100 Vac at 50 to 440 Hz.

OVERVOLTAGE PROTECTION

Suffix "–OV" on a specific model number designates a clamp type Overvoltage Protection circuit. This feature applies to 5V output models, only, and is factory set at approximately 6.5 Vdc. This type of Overvoltage Protection is available for other voltages. The input should be fused when using overvoltage protection. For information, please consult the factory.

LOW TEMPERATURE COEFFICIENT

Suffix "T" on a specific model number designates a unit having a Temperature Coefficient of less than 0.005%/°C similar to the "WS" Series. Please refer to page 11.

UL 544C COMPONENT RECOGNITION

Suffix "W" or "R" on a specific model, as described on page 8, designates that the supply has been manufactured to meet all specifications required under UL 544C.

SPELLMAN
HIGH-VOLTAGE
ELECTRONICS
CORPORATION

Our Third Decade of Leadership in High-Voltage Technology
1930 ADEE AVENUE, BRONX, NEW YORK 10469 (212) 671-0300 TWX 710 593-4135

RHR LINE OF REGULATED HIGH VOLTAGE POWER SUPPLIES

APPLICATIONS

- CRT DISPLAYS
- CAPACITOR CHARGING
- LASERS
- ELECTRON MICROSCOPES
- IONIZATION CHAMBERS
- CORONA TESTING
- OEM
- ELECTROSTATIC FLOCKING AND SPRAYING
- INSULATION FAULT DETECTION
- X-RAY SUPPLIES
- ION IMPLANTATION
- ALL-PURPOSE LAB SUPPLIES
- ELECTRON BEAM ACCELERATORS

FEATURES

- ALL SILICON, SOLID STATE DESIGN
- 0.01% REGULATION/0.02% RIPPLE
- OVERLOAD AND SHORT CIRCUIT PROOF
- SMALL SIZE
- LIGHT WEIGHT
- LOW COST
- THREE YEAR WARRANTY

SPELLMAN
HIGH VOLTAGE DC SUPPLY

SPECIFICATIONS

OUTPUT VOLTAGE: Continuously adjustable over entire range from zero to rated voltage by means of ten-turn potentiometer. Resolution better than 250 ppm. Finer resolution available on special order.

INPUT VOLTAGE: 105-125 Volts AC, 55-65 Hz, single phase. Other inputs available on request. See options.

REGULATION: Load: 0.01% +1V, for full load change.
Line: ±0.01% ±1V, for ±10% change.

RIPPLE: 0.02% +2 volts, RMS. 0.1% RMS on 100KV models and above.

POLARITY: Positive, Negative, and Reversible with respect to ground available.

STABILITY: 0.02% +2 volts per hour, 0.05% +5 volts per eight hours.

TEMPERATURE COEFFICIENT (PER °C): 0.02% +2 volts.

TEMPERATURE RANGE: Operating: −20°C to +55°C
Storage: −40°C to +85°C

OVERLOAD PROTECTION: All units are overload, short circuit and arc protected by means of fast acting, self restoring, current limiting circuitry. Overload tripout (OL) option available. (See next page) Surge limiting resistors included.

AC POWER INPUT PROTECTION: Control Fuse.

CONTROLS: AC ON Toggle Switch. AC ON Indicator. Output Adjust—Ten-turn potentiometer with locking read-out dial.

METERING: Single range voltmeter, 2% accuracy. Single range ammeter, 2% accuracy.

PHYSICAL CHARACTERISTICS: All units in this series up to 100KVDC output are designed for rack mounting. Panels are 19" wide with standard notching. Units are fully enclosed for desk or table top operation. Optional bench mounting cabinet available. High voltage sections of higher voltage units are contained in a plexiglas tubular enclosure mounted on a base cabinet. The high voltage electrode is located at the top of the structure.

OUTPUT CABLE: All models up through 100KVDC are provided with 6 feet of shielded high voltage cable. The cables are designed with a plug arrangement so that they are easily removed from the mating receptacle located on the rear of the power supply.

CURRENT LIMITING: This is supplied as standard on all models. No suffix letters are required in the model number. This feature automatically limits the load current to approximately 110% of rated load regardless of the overload imposed upon the power supply. The power supply continues to operate at any overload condition including a short circuit by automatically reducing the output voltage as required to maintain the current limit. The unit is self-restoring to its normal operating level when the overload condition is removed. The voltage cut-off characteristic is quite sharp and approaches the ideal characteristic of a voltage-current regulator with automatic crossover.

FIXED POLARITY MODELS

ELECTRONICS
CORPORATION

RHR LINE OPTIONS

The RHR line is available with any combination of the options listed below. The appropriate code letters are suffixed to the model number.

● OVERLOAD TRIP-OUT	(OL)	● 100 VOLT INPUT (50-60 Hz)	(100)	● PARALLEL OPERATION	(PM)
● REMOTE VOLTAGE PROGRAMMING	(RVC)	● FOCUS TAP	(F)	● SLAVED BIPOLAR (±) OPERATION	(BPM)
● BENCH CABINET	(C)	● REMOTE RESISTANCE PROGRAMMING	(RC)	● FLOATING GROUND	(FG)
● CURRENT REGULATION	(CR)	● REMOTE MONITOR TERMINALS	(TP)	● INHIBIT CIRCUIT	(IC)
● 220 VOLT INPUT (50-60 Hz)	(220)	● REMOTE CONTROL PANEL	(RCP)	● SLOW START	(SS)

● OVERLOAD TRIPOUT (OL)

The OVERLOAD TRIPOUT protection feature rapidly "crowbars" the power supply when the load current exceeds approximately 110% of the rated load. A fast acting, latching circuit, removes power to the oscillator, thereby turning off the high voltage. The power supply must be reset by OFF-ON activation of the main AC power switch. **When the OVERLOAD TRIPOUT (OL) option is provided, it replaces the normally standard CURRENT LIMITING feature.** See CURRENT LIMITING section above for additional information.

Add Suffix letters (OL) at the end of the basic model number when this option is desired.

If an overload trip-out level less than the power supply rated current is desired, this limit, in milliamperes, is specified in parenthesis following OL; i.e. OL(4) = 4 milliamperes trip-out. NOTE: Values as low as 0.25 milliampere may be selected as standard.

● REMOTE VOLTAGE PROGRAMMING (RVC)

This option enables the power supply to be controlled either by the standard front panel control or by an external low voltage DC signal source. The output voltage is directly proportional to the input voltage with linearity and proportionality better than 1% of full scale. The programming voltage polarity is always positive, regardless of the output polarity of the power supply.

A barrier type terminal board is provided on the rear of the chassis for connection to the external source. When properly connected for remote programming, the front panel control serves as an adjustable voltage limit.

Add suffix letters RVC at the end of the basic model number when this option is desired.

Unless otherwise specified, the ratio of input to output is such that 0 to +6VDC controls the output from 0 to rated kilovolts. If a control voltage other than 6 volts is desired, any value desired between 6 and 250 volts DC may be specified in parenthesis after the option letters; i.e. RVC(10) specifies a 0 to 10 volt programming signal. The programming source must provide at least 100 microamperes at maximum input.

Slew rate of output is approx. 0.5 sec. "up" and 2 sec. "down."

● BENCH CABINET (C)

A deluxe styled rack cabinet is available for all models. The base dimensions are 22" wide x 18" deep. Height is selected to fit individual unit height. Two-tone blue-gray color scheme is standard. Carrying handles are located conveniently on the sides of the cabinet for easy handling.

Add suffix letter (C) at the end of the basic model number when this option is desired.

● CURRENT REGULATION (CR)

OUTPUT CURRENT AND VOLTAGE: Both current and voltage regulation with automatic cross-over are provided. The current and voltage ratings are the same as corresponding standard RHR model. Output current is adjustable from zero to rated current over the full voltage compliance range from zero to rated voltage. A front panel mounted 10-turn potentiometer provides resolution of 250 ppm for the current control. A single turn pot is provided for voltage adjustment.

CURRENT REGULATION: ±0.1% for any current setting between 25% and 100% of rated value for a load variation from 10% to 100% of full voltage compliance.

VOLTAGE REGULATION: ±0.05% for line and load variations.

PROTECTION: The power supply output is protected by the automatic cross-over circuitry and will operate safely into any load between open and short circuit.

RIPPLE: 0.1% RMS of output voltage.

Other characteristics are similar to standard RHR voltage regulation specifications.

This type of unit is particularly suitable for gas laser excitation since the supply can provide a relatively high open circuit voltage for starting the plasma discharge. Once the arc has formed, the supply automatically operates in a constant current mode at any preset level. Add suffix letters (CR) at the end of the basic model number when this option is desired.

● 220 VOLT INPUT (50-60 Hz) (220)

Nominal input voltage between 220 and 250 volts RMS, 50-60 Hz, single phase can be accommodated with this option. Input current must be calculated based on approximately 50% efficiency. Add suffix (220) at the end of basic model number when this option is desired.

● 100 VOLT INPUT (50-60 Hz) (100)

Nominal input voltage between 100 and 130 volts RMS, 50-60 Hz, single phase can be accommodated with this option. Input current must be calculated based on approximately 50% efficiency. Add suffix (100) at the end of basic model number when this option is desired.

● FOCUS TAP (F)

This option provides for a separate, supplementary output. The auxiliary voltage is obtained by including a DC to DC supply selected from the Spellman RM line of modules. Any 1.5 watt unit with voltage rating to 15KVDC may be selected. Specifications for this supplementary output are in accordance with RM line data.

Voltage control is provided on the front panel by means of a single turn potentiometer. If the RC, Remote Control, option is ordered for the main output, then provision is made for remote control of the auxiliary output also.

Suffix letter F(max KV) appears at the end of the basic model number when this option is provided. The number in the parenthesis is the rated maximum output voltage of the RM module. The polarity of the module is POSITIVE unless otherwise specified. The focus option is available on 30KV and 40KV models only.

● REMOTE RESISTANCE PROGRAMMING (RC)

This option permits the output voltage to be controlled by either an external potentiometer (3 terminals) or the front panel 10-turn control potentiometer. A barrier type terminal board is mounted on the rear of the chassis for connection to an external potentiometer. When wired in accordance with the appropriate schematic, the front panel control is switched out, and the remote potentiometer assumes control. A 5000 ohm potentiometer is required, although fixed resistor dividers of equivalent value may be used. A shielded, insulated cable with a twisted pair should be used, with the shield connected to common. Up to 100 feet of cable is permitted. Add suffix (RC) at the end of the basic model number when this option is desired.

● REMOTE MONITOR TERMINALS (TP)

BNC connectors are provided on the rear of the chassis for remote monitoring of voltage and current. The voltage monitor circuit provides a 1 volt signal corresponding to maximum rated voltage accurate to 1%. The current monitor circuit is taken across a 100 ohm resistor (100mV/mA). The current monitor reads true load current and does not include any internal bleeder or regulator drain. Add suffix letters (TP) at the end of the basic model number when this option is desired.

● REMOTE CONTROL PANEL (RCP)

Any standard model may be supplied with the control panel removed from the basic supply. Terminal boards are added to the basic supply on the rear of the chassis and to the control panel so that the two parts are readily interconnected. 15 feet of appropriately shielded interconnection cable is provided. The control panel contains an AC power switch, fuse, and pilot light, kilovoltmeter, milliammeter, and 10-turn control potentiometer. Add suffix letters (RCP) at the end of the basic model number when this option is desired. NOTE that all models with output voltage of 150KVDC or greater are supplied with the REMOTE CONTROL PANEL as standard.

● PARALLEL OPERATION (PM)

Any model in the RHR line can be used as a "master" controller for parallel operation of up to three "slave" units of the same rating from either the RHR or UHR line. Whether the "slave" units are from the RHR or UHR units, the overall characteristics of the parallel system are governed by the specifications of the RHR "master" supply and are the same as standard specifications except for ripple which will deteriorate to the UHR levels. Current imbalance between units is less than 10% and no derating is required for total current capability of the parallel system.

Each power supply unit may be used independently, if desired, by simple rearrangement of terminal board connections. Add suffix (PM) after the standard model number for the "master supply". Add suffix (PS) after the standard model number for the "slave" supplies. Up to three "slaves" can be controlled by one "master".

● SLAVED BI-POLAR (±) OPERATION (BPM) and (BPS)

Any positive polarity model in the RHR line can be used as a "master" for "tracking" control of the negative polarity equivalent RHR model. Thus, one control provides adjustment of both supplies from zero to rated output voltage. The negative polarity output "tracks" the positive output within ±1% from 10% to rated output voltage. All specifications for regulation, ripple, etc. are governed by individual unit characteristics. Add suffix (BPM) and (BPS) after standard model number for positive and negative polarity units respectively.

● FLOATING GROUND (FG)

The FLOATING GROUND feature isolates the "low end" return of the power supply with respect to ground. Nominal insulation of 70 volts RMS is provided for the "floating" terminal. The terminal is also bypassed to chassis ground by a one megohm resistance, a 0.1mfd. capacitance, and a neon glow lamp whose breakdown voltage is nominally 85 volts (type NE2).

The purpose and application of the FLOATING GROUND option is to permit the user to "ground" or "return" the low end of the power supply at a point within his system which will suppress undesirable ground loop currents.

In some instances, the user may desire to monitor the load current with accurate instrumentation. For this situation, the user can insert his own current monitoring circuitry between the "FLOATING GROUND" terminal and "system" ground. This may consist simply of an appropriate milliammeter or microammeter, or alternatively, a current sensing resistor which can be calibrated with a sensitive digital or differential voltmeter, as desired. It should be understood, however, that a low impedance return to ground must be provided by the user for proper operation of the power supply. One thousand ohms or less is quite appropriate, and ten thousand ohms would be an acceptable value, if necessary. Check with our Engineering Department for further information. Add suffix (FG) after the standard model number when the FLOATING GROUND option is desired.

● INHIBIT CURCUIT (IC)

The INHIBIT CIRCUIT option requires that a separate low DC signal voltage be applied to the appropriate terminals on the rear of the supply in order to enable the unit to turn on. Further, when the signal voltage is removed, the high voltage turns off. The signal level for ON is at least five (5) volts (but not higher than fifty (50) volts, unless otherwise specified), and for OFF, the signal level must drop below 0.5 volts. This is compatible with TTL logic and other computer interface arrangements. Add suffix (IC) after the standard model number when the INHIBIT CIRCUIT option is desired.

● SLOW START (SS)

The SLOW START option causes the output voltage of the power supply to ramp upwards to its operating voltage setting when the unit is turned on. The rise is fairly linear so that the time to reach the operating level is approximately proportional to the control setting. The normal rise time is approximately 30 seconds for maximum output, but other rise times from 10 to 60 seconds may be specified by adding the appropriate number after the suffix letters.

This option also has an additional feature in that after an overload has occurred, and the output voltage has been reduced by the current limiting protection circuit, the subsequent automatic recovery to normal operation when the overload condition has been removed, follows the same slow rise as the initial start-up. Add suffix (SS) after the standard model number when the SLOW START option is desired.

0-50	1.0	50	RHSR50P50 RHSR50N50			
0-60	1.0	60	RHSR60P60 RHSR60N60			

FEATURES:

The following features are standard on all RHSR models unless otherwise specified.

REVERSIBLE POLARITY:

The polarity of the output voltage may be reversed to either POSITIVE or NEGATIVE as desired on all units up to and including 25KV. This is readily accomplished from outside the unit by a manual switch on the rear of the chassis (Pictured above).

CURRENT LIMITING:

Automatically limits load current to approximately 110% of rated load regardless of overload imposed on power supply. Supply continues to operate at any overload condition, including short circuit, by automatically reducing output voltage as required to maintain the current limit. Unit is self-restoring to normal operating level when overload condition is removed. The voltage cut-off characteristic is quite sharp and approaches the ideal characteristic of a voltage—current regulator with automatic crossover. OVERLOAD TRIPOUT option also available. See below.

Application Notes: The current limit feature is desirable for capacitive load conditions. When used as a "capacitor charger", the power supply with its current limit circuitry provides essentially a constant current charge.

REMOTE VOLTAGE PROGRAMMING:

This feature enables the power supply to be controlled by either the standard front panel control or by an external low voltage DC signal source. The output voltage is directly proportional to the input voltage with linearity and proportionality better than 1% of full scale. The programming voltage polarity is always positive, regardless of the output polarity of the power supply. Programming terminals are located on a barrier type terminal board on the rear of the chassis. When appropriate connections are made for remote programming, the front panel control serves as an adjustable voltage limit.

Unless otherwise specified, the ratio of input to output is such that 0 to +6 volts DC controls the output from 0 to rated kilovolts. If a signal voltage other than 6 volts is desired, any value desired between 10 and 250 volts DC may be specified by adding RVC ( ) to the model number and placing the desired signal voltage within the parenthesis. The program source must be capable of delivering 100 microamperes to the input terminal at maximum output.

REMOTE RESISTANCE PROGRAMMING:

This feature permits output voltage to be controlled by either an external potentiometer (3 terminals) or the front panel 10-turn control potentiometer. Programming terminals are located on a barrier type terminal board on the rear of the chassis.

REMOTE MONITOR TERMINALS:

BNC connectors are provided on the rear of the chassis for remote monitoring of voltage and current. The voltage monitor circuit provides a 1 volt signal corresponding to maximum rated voltage with 1% accuracy. The current monitor circuit is taken across a 100 ohm resistor (100mV/mA). The current monitor reads **true load** current and does not include any internal bleeder or regulator drain.

SPECIFICATIONS:*

INPUT: 105-125 volts AC, 55-65 Hz, single phase. Other inputs available on request.

OUTPUT: Continuously adjustable over entire range from zero to rated voltage by means of 10-turn potentiometer. Resolution better than 250 ppm. Finer resolution available on special order.

REGULATION: Load: 0.001% for full load change.
Line: ±0.001% for ±10% change.

RIPPLE: 0.001% RMS.

STABILITY: 0.005% per hour, 0.01% per 8 hours.

TEMPERATURE COEFFICIENT: 0.005% per degree C.

TEMPERATURE RANGE: Operating: 0°C to +50°C. Storage: −40°C to +85°C.

RESETTABILITY: 0.05% of full scale.

OVERLOAD PROTECTION: All units are overload, short circuit and arc protected by means of fast acting, self-restoring, electronic circuitry. Other protection options available. Surge limiting resistors included.

AC POWER INPUT PROTECTION: Control Fuse.

CONTROLS: AC "ON" indicator; AC "ON" toggle switch. Output adjustable by means of ten-turn potentiometer with locking read-out dial.

METERING: Single range voltmeter, 2% accuracy. Single range ammeter, 2% accuracy.

PHYSICAL CHARACTERISTICS: All units in this line are designed for rack mounting. Panels are 19" wide with standard notching. Units are fully enclosed for desk or table top operation.

OUTPUT CABLE: All models are provided with 6 feet of shielded high voltage cable. The cables are designed with a plug arrangement so that they are easily removed from the mating receptacle located on the rear of the power supply.

*Characteristics hold from 10%-100% of range, unless otherwise specified.

OPTIONS:

OVERLOAD TRIPOUT (QL)

The OVERLOAD TRIPOUT protection feature rapidly "crowbars" the power supply when the load current exceeds approximately 110% of the rated load. A fast acting, latching circuit, removes power to the oscillator, thereby turning off the high voltage. The power supply must be reset by OFF-ON activation of the main Ac power switch.

When the OVERLOAD TRIPOUT (OL) option is provided, it replaces the normally standard CURRENT LIMITING feature. See CURRENT LIMITING section above for additional information.

Add suffix letters (OL) at the end of the basic model number when this option is desired.

If an overload trip-out level less than the power supply rated current is desired, this limit, in milliamperes, is specified in parenthesis following OL; i.e. OL(4) = 4 milliamperes trip-out. NOTE: Values as low as 0.25 milliampere may be selected as standard.

BENCH CABINET (C)

A deluxe styled rack cabinet is available for all models. The base dimensions are 22" wide x 18" deep. Height is selected to fit individual unit height. Two-tone blue-gray color scheme is standard. Carrying handles are located conveniently on the sides of the cabinet for easy handling. Add suffix letter (C) at the end of the basic model number when this option is desired.

220 VOLT INPUT (50-60 Hz) (220)

Nominal input voltage between 220 and 250 volts RMS, 50-60 Hz, single phase can be accommodated with this option. Input current must be calculated based on approximately 50% efficiency. Add suffix (220) at the end of basic model number when this option is desired.

100 VOLT INPUT (50-60 Hz) (100)

Nominal input voltage between 100 and 130 volts RMS, 50-60 Hz, single phase can be accommodated with this option. Input current must be calculated based on approximately 50% efficiency. Add suffix (100) at the end of basic model number when this option is desired.

REMOTE CONTROL PANEL (RCP)

Any standard model may be supplied with the control panel removed from the basic supply. Terminal boards are added to the basic supply on the rear of the chassis and to the control panel so that the two parts are readily interconnected. 15 feet of appropriately shielded interconnection cable is provided. The control panel contains an AC power switch, fuse, and pilot light, kilovoltmeter, milliammeter, and 10-turn control potentiometer. Add suffix letters (RCP) at the end of basic model number when this option is desired.

PARALLEL OPERATION (PM)

Any model in the RHSR line can be used as a "master" controller for parallel operation of up to three "slave" units of the same rating. Current imbalance between units is less than 10% and no derating is required for total current capability of the parallel system.

Each power supply unit may be used independently, if desired, by simple rearrangement of terminal board connections. Add suffix (PM) after the standard model number for the "master" supply. Add suffix (PS) after the standard model number for the "slave" supplies. Up to three "slaves" can be controlled by one "master".

SLAVED BI-POLAR (±) OPERATION (BPM) and (BPS)

Any positive polarity model in the RHSR line can be used as a "master" for "tracking" control of the negative polarity equivalent RHSR model. Thus, one control provides adjustment of both supplies from zero to rated output voltage. The negative polarity output "tracks" the positive output within ±1% from 10% to rated output voltage. All specifications for regulation, ripple, etc. are governed by individual unit characteristics. Add suffix (BPM) and (BPS) after standard model number for positive and negative polarity units respectively.

FLOATING GROUND (FG)

The FLOATING GROUND feature isolates the "low end" return of the power supply with respect to ground. Nominal insulation of 70 volts RMS is provided for the "floating" terminal. The terminal is also bypassed to chassis ground by a one megohm resistance, a 0.1mfd. capacitance, and a neon glow lamp whose breakdown voltage is nominally 85 volts (type NE2).

The purpose and application of the FLOATING GROUND option is to permit the user to "ground" or "return" the low end of the power supply at a point within his system which will suppress undesirable ground loop currents.

In some instances, the user may desire to monitor the load current with accurate instrumentation. For this situation, the user can insert his own current monitoring circuitry between the "FLOATING GROUND" terminal and "system" ground. This may consist simply of an appropriate milliammeter or microammeter, or alternatively, a current sensing resistor which can be calibrated with a sensitive digital or differential voltmeter, as desired. It should be understood, however, that a low impedance return to ground must be provided by the user for proper operation of the power supply. One thousand ohms or less is quite appropriate, and ten thousand ohms would be an acceptable value, if necessary. Check with our Engineering Department for further information. Add suffix (FG) after the standard model number when the FLOATING GROUND option is desired.

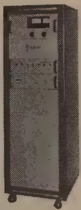
SERIES REGULATED POWER SUPPLIES
HP SERIES



APPLICATIONS:

- GAS LASERS
- CAPACITOR CHARGERS
- SPUTTERING SUPPLIES
- MODULATORS
- GENERAL LABORATORY POWER SUPPLIES

SPECIFICATIONS

OUTPUT VOLTAGE—OUTPUT CURRENT: Continuously adjustable over full range by separate ten-turn potentiometers.

REGULATION: Both voltage and current regulated with automatic crossover in accordance with following characteristics.

Voltage Mode: Load: 0.01%, for full load changes. Line: 0.01%, for 10% line change. Specification holds down to 10% of rated output voltage.

Current Mode: Load: 0.01% +1 microampere, for 10% load change (i.e., 10% voltage compliance variation); 100 microamperes, maximum, for full load (full voltage compliance) change. Line: 0.01% +1 microampere for 10% line change.

TRANSIENT RESPONSE: Voltage Mode: Less than 1000 microseconds to recover to within 1% of maximum voltage level for 25% load step change, or 5% line voltage step change. Current Mode: Less than 1000 microseconds to recover to within 1% of maximum current level for 10% load (voltage complaince) step change, or 5% line voltage step change. (Consult factory for response time to greater changes).

RIPPLE: Voltage Mode: 0.01% +100 millivolts, peak to peak. Current Mode: 1% or 100 micro-amperes peak to peak.

INPUT VOLTAGE: See Chart.

POLARITY: Reversible on all models up to 20KVDC. Negative on all models above 20KVDC.

STABILITY: Voltage: 0.01% +100 millivolts per hour, 0.025% +250 millivolts per 8 hours. Current: Less than 100 microamperes, 8 hours.

METERS: Single range voltmeter, 2% accuracy. Single range ammeter, 2% accuracy.

PROTECTION: Units are inherently protected by the automatic crossover regulating system.

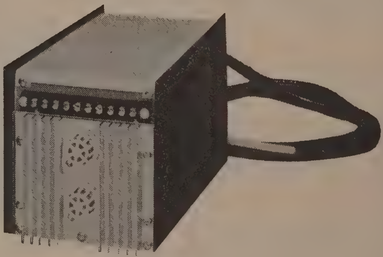
MODULAR HIGH VOLTAGE POWER SUPPLIES

SRM SUPER-REGULATED MODULES



SPECIFICATIONS

INPUT: 28 volts DC, ±10%. AC option available.

OUTPUT: Continuously adjustable over entire range from zero to rated output voltage. Programming terminals provided for connection to remote potentiometric or voltage input programming sources.

OUTPUT POLARITY: All models available with either positive or negative polarity with respect to ground.

REGULATION: LINE: 0.001% from 10% to maximum rated voltage.
LOAD: 0.001% from 10% to maximum rated voltage.

RIPPLE: 0.001% RMS, from 10% to maximum rated voltage.

STABILITY: 0.005% per hr.; 0.01% per 8 hrs.

TEMPERATURE COEFFICIENT: 0.005% per °C.

OVERLOAD PROTECTION: All models are overload, short circuit and arc protected by means of state-of-the art Spellman circuitry. All units are fully protected against high input programming voltage.

EFFICIENCY: Basic converter efficiency on all units exceeds 60%.

SERVICE CONDITIONS: 0-60°C.

MECHANICAL: The SRM module is built with a sub-assembly structure which is completely pluggable. This service feature permits quick breakdown of the unit to the individual sub-assembly level and is designed for interchangeability of parts so that servicing can be a matter of a few minutes.

CIRCUIT CONCEPT: High frequency power oscillator circuit enables low ripple to be achieved with small, low stored energy capacitors.

WEIGHT: Lbs. Net: 12. Lbs. Ship: 13. Kg. Net: 5.45. Kg. Ship. 5.91.

SIZE: 5-3/16" x 5-1/2" x 9-1/2" max.

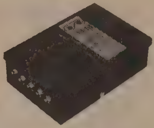
WRM- WELL REGULATED MODULES

SPECIFICATIONS



INPUT: +28VDC ±10%.

OUTPUT: All WRM models feature adjustability over the full range from zero to maximum rated output voltage (−0, +5% tolerance). All models are remote voltage and resistance programmable.

All FWRM models are variable over the narrow range specified for each output voltage level (−20% low end and +5% high end tolerance). All models are remote voltage and resistance programmable.

OUTPUT POLARITY: All models are available with either positive or negative output polarity with respect to ground. See table.

REGULATION: LINE:* ±0.01%, for ±10% line change.
LOAD:* 0.05% per watt output rating, full load change.

RIPPLE:* 0.01% of rated voltage per watt output rating, peak to peak.

OVERLOAD PROTECTION: All models are overload, short circuit, arc, and reverse voltage protected by means of state-of-the-art Spellman circuitry.

PROGRAMMING: Terminals are provided for remote voltage or resistance programming.

EFFICIENCY: Basic converter efficiency on all units exceeds 60%.

SERVICE CONDITIONS: 0-60°C.

*Specifications hold from 10%-100% of maximum rated output voltage.

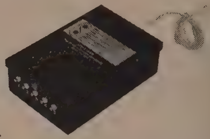
RM-FRM REGULATED MODULES

SPECIFICATIONS



INPUT: +28VDC ±10%. AC option available.

OUTPUT: All RM models feature adjustability over the full range from zero to maximum rated output voltage (−0, +5% tolerance). All models are remote resistance programmable.

All FRM models are variable over the narrow range specified for each output voltage level. (−20% low end and +5% high end tolerance). All models are remote resistance programmable. Fixed versions available, consult factory.

OUTPUT POLARITY: All models are available with either positive or negative output polarity with respect to ground. See table.

REGULATION: LINE:* ±0.01% for ±10% line change.

LOAD:* 1% per watt output rating, full load change.

RIPPLE:* 0.1% RMS per watt output rating.

OVERLOAD PROTECTION: All models are overload, short circuit, arc, and reverse voltage protected by means of state-of-the-art Spellman circuitry.

PROGRAMMING: Terminals are provided for remote resistance programming.

EFFICIENCY: Basic converter efficiency on all units exceeds 60%.

SERVICE CONDITIONS: 0-60°C.

*Specifications hold from 10%-100% of maximum rated output voltage.

UM LINE HIGH VOLTAGE ENCAPSULATED

SPECIFICATIONS

INPUT: +24 VDC ± 10% for rated maximum output voltage. AC option available.

REGULATION: LINE: Output voltage is approximately proportional to input voltage.
LOAD: 15% per watt load variation at max. voltage.

RIPPLE: 0.1% RMS.

EFFICIENCY: 50% minimum.

OUTPUT POLARITY: Available in positive or negative polarity with respect to ground (case). (Letter "P" or "N" in model number designates positive or negative polarity respectively).

VOLTAGE ADJUSTMENT: Output voltage is adjustable from near zero to rated voltage by adjustment of the DC input voltage. The output is approximately proportional to input voltage.

PROTECTION: Unit is fully protected against all overload and short circuit conditions.

MECHANICAL INFORMATION: See outline drawing for size. Terminals are provided for DC input and common. A 12" "flying" lead is provided for the high voltage output. The unit is encapsulated in a closed metal case with mounting inserts in the base.

SERVICE CONDITIONS: 0-60°C.

CIRCUIT CONCEPT: High frequency power oscillator circuit enables low ripple to be achieved with small, low stored energy capacitors, resulting in greater safety as well as better performance. Oscillator frequency is well above the audio range.

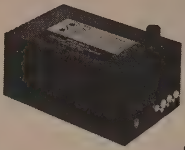
CATHODE RAY TUBE POWER SUPPLIES

FOR AIRBORNE, GROUND SUPPORT, MILITARY REQUIREMENTS— HIGHLY REGULATED, HIGHLY EFFICIENT



MODEL RV-16P8/F

MODEL RV-20P10

SPECIFICATIONS

DESIGN PHILOSOPHY: These compact, highly efficient, all solid state DC power supplies have been designed for commercial and military cathode ray tube applications, both airborne and ground support.

The units are built to achieve all environmental requirements of MIL-E-5400 (general specifications for airborne electronic equipment). The MTBF at 71°C per MIL-HDBK-217A is in excess of 60,000 hours.

ENVIRONMENTAL: The power supply meets all specifications given below when subjected to the environmental conditions specified:

TEMPERATURE RANGE: Operating: Minus 55°C to plus 71°C (ambient). Storage: Minus 65°C to plus 125°C (ambient)

SHOCK: 50G, 11 milliseconds. Per MIL-STD-810

VIBRATION: 10G, per MIL-STD 810, method 514, curve D, figure 514-1

ACCELERATION: MIL-STD-810, method 513

THERMAL SHOCK: Minus 55°C to plus 100°C, per MIL-STD-810

HUMIDITY: MIL-STD-810, method 507, procedure 1.

ALTITUDE: MIL-STD-810, method 504, procedure 1. Maximum altitude 60Kft. Maximum pressure change 1.25 inches of HG per second

SALT SPRAY: MIL-STD-202E, test condition A, method 101D

FUNGUS: MIL-STD-454C, requirement 4

EXPLOSION: MIL-STD-810, method 511, procedure 11

ACOUSTIC NOISE: MIL-STD-810, method 515, category A

PERFORMANCE SPECIFICATIONS:

ANODE:

Output voltage: Zero to +20KV. (Model RV-20P10).
Zero to +16KV. (Model RV-16P8/F).
Output current: 500μA—at all voltage levels.
Input voltage: 28VDC ±10%.
Input current: No load: 175mA. Full load: 550mA.

REGULATION:

Line: 0.005% (±10% change)
Load: 0.005% (full load change)
Dynamic: 10V/100UA
Ripple: 0.01% peak to peak at full load.
Output adjustability: A multiturn pot varies the output voltage over the available range.
Remote Trim: The output voltage may be remotely controlled by a voltage signal to the remote trim terminal. A zero volt programming signal corresponds to 100% output and a +13V programming signal.

PROTECTION: The unit is fully protected against short circuit, overload reverse input polarity. Special design care has assured that these units will withstand all CRT "arc over" conditions.

FOCUS: (Model RV16P8/F only)

Output voltage: +600VDC ±5% with anode at 12KV, +800VDC ±5% with anode at 16KV

Output current: Up to 10mA with reduced anode current

Regulation: Better than 3%

Ripple: 1% peak at 1mA

MATERIALS AND FINISH: The units are fully encapsulated and shielded in a black anodized aluminum case. Materials and finish are selected in accordance with MIL-E-5400.

PHYSICAL CHARACTERISTICS:

DIMENSIONS: 3.125" wide x 4.875" long x 2" high

VOLUME: 30.47 cubic inches

WEIGHT: 2 pounds

LOW VOLTAGE TERMINATIONS: A six pin MIL type connector can be provided

MATING CONNECTOR: LG-1 connector and LG-1/2 connector

CRT MULTIPLE OUTPUT POWER SUPPLIES RMC LINE

SPECIFICATIONS:

INPUT: +28VDC ±10%

EFFICIENCY: Basic converter efficiency greater than 60%

SIZE: 3-5/8" x 6-5/8" x 2-1/16" (mm)

WEIGHT: 2-1/2 lbs. (1.14 Kg.)

GENERAL INFORMATION: These power supplies have been specially designed for CRT applications. This design eliminates the space consuming, costly problem of incorporating several power supplies. Spellman's RMC provides grid-1 and grid-2 voltages as well as the anode voltage for the CRT—all in a single package, small, well regulated and very economical.

STANDARD MODELS

(For non-standard output voltages, please contact the factory)

Model	Fixed Anode Voltage	G-2 Voltage	G-1 Voltage
RMC10P	10KV	+400V	−100V
RMC12P	12KV	+400V	−100V
RMC15P	15KV	+400V	−100V

All voltages are fixed, within ±5% of rated value.

SPELLMAN
HIGH-VOLTAGE ELECTRONICS CORPORATION

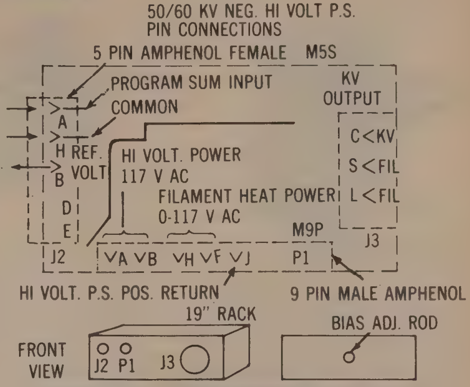
Our Third Decade of Leadership in High-Voltage Technology

1930 ADEE AVENUE, BRONX, NEW YORK 10469 (212) 671-0300 TWX 710 593-4135

Spellman High Voltage Electronics Corporation takes great pride in the versatility and adaptability of its many high voltage power supplies. During the past three decades, we have solved many vexing problems in high voltage technology. The experience gained in providing solid solutions to these problems has given our Spellman engineers the greatest range of diversity in the high voltage industry. Not only has the standard Spellman line been designed to take advantage of this remarkable diversity (see the wide variety of options and features provided for the Spellman rack lines and the extensiveness of the Spellman module range), but also we have made it a point to continue the Spellman tradition of attacking new and challenging customer problems.

In the pages that follow, we show examples of sixteen types of power supplies designed to meet special customer problems and applications. We are always pleased to survey new horizons, so the next time you have a special high voltage problem—give Spellman a call.

SCANNING ELECTRON MICROSCOPE POWER SUPPLY THE SEM 60

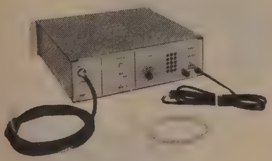


This power supply has been designed by our Spellman engineers to provide the high voltage, floating filament, and bias control necessary for many S.E.M. applications. The high voltage is adjustable from 0 to 60 KV at 250 UA. Regulation (line and load) is 10 PPM and ripple is 10 PPM as well. In addition the power supply features 15 minute stability of 10 PPM after a 30 minute warm up. The output is programmable by means of a remote resistance, and can be monitored remotely as well.

The auxiliary floating filament supply provides a 0.1% filtered, adjustable 0-6 VDC at 5 amperes. The bias control consists of a 10 megohm, 5 watt rheostat connected between the −60KV output and filament center tap.

The S.E.M. 60 is mechanically designed for mounting in a standard 19" rack and is only 5¼" high.

COMPUTER OUTPUT MICROFILM POWER SUPPLY



SPELLMAN MODEL
RHSR—25P25F(3)X582

This multiple output, super-regulated high voltage power supply has been designed to provide the anode, G-2 and filament voltages for the cathode ray tube section of a computer output microfilm system. Based on the Spellman RHSR line, this power supply features an anode voltage which is adjustable between +20KV and +25KV with regulation and ripple of 0.001%. The high voltage output current is rated for 1 ma. The G-2 voltage is adjustable from +1.5 KV to +3KV at 500μa and features 0.01% regulation and ripple. The filament voltage is rated for 6.5 vdc, 600mA and is filtered for ripple of 2% RMS max.

Transient response for the high voltage and G-2 outputs permits less than a 10 volt peak swing for full load change and the outputs recover to within 0.01% of their original value within 5 msec. In addition, the unit is provided with an inhibit circuit such that if the inhibit signal is present, anode and G-2 are operative while if the signal is absent anode and G-2 are not operative. The filament supply is always On if the AC in On. BNC monitor points are provided for anode voltage and current and G-2 voltage.

The RHSR-25P25F(3)X582 is designed for standard 19" rack mounting and occupies only 5¼" of rack space.

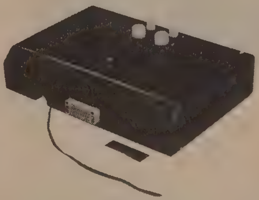
RACK MOUNTED MULTIPLE OUTPUT, ALL-PURPOSE CRT POWER SUPPLY

SPELLMAN
HIGH VOLTAGE DC SUPPLY
POWER
OUTPUT

CRT 40

This rugged, high performance power supply has been designed to be used by high production cathode ray tube manufacturers as well as cathode ray tube users. The CRT-40 can be used with the widest variety of cathode ray tubes. Both anode and focus voltage feature full adjustability (0-40KV and 0-6.5KV respectively), remote resistance programming, remote voltage monitoring, and remote current monitoring (optional for focus output). Regulation is 0.01% for line and load and ripple is 0.01% RMS. The unit is designed for standard 19" rack mounting and occupies only 5¼" of rack space. Model CRT30, a 30KV equivalent version, is also available.

MILITARIZED CATHODE RAY TUBE POWER SUPPLY SYSTEM FOR AIRBORNE RECORDING OF HIGH RESOLUTION RADAR DATA



SYSTEM FEATURES
ANODE, 2 FOCUS
and DYNAMIC FOCUS OUTPUTS

This militarized, airborne power supply features an anode voltage of +15KV (50 μa), 2 identical focus voltages—+4.1 to +4.5KV (100μa)—and a dynamic focus capability of between +20 and +200 volts above the static focus signal in response to a +5 v drive signal. The dynamic focus has a frequency response of DC to 60Khz (−3 dB).

The anode voltage has line regulation of 0.1% for ±10% change and load regulation of 0.05%. Ripple is less than 4 volts p-p. Each of the focus voltages has line and load regulation of 0.05% and ripple less than 4 v p-p.

This CRT power supply system is built to operate up to 50,000 feet and at an operating temperature range of −54°C to +71°C. All outputs are fully protected against short circuit, overload and CRT "arc-over" conditions.

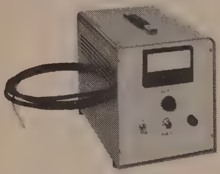
LOW COST 60 KV POWER SUPPLY FOR ELECTROSTATIC APPLICATIONS



SPELLMAN MODEL UHP60P10

This power supply provides an output voltage which is continuously adjustable from 0 to 60KVDC, operating from an input voltage of 115V RMS, 60 Hz. The output current of the Spellman UHP60P10 is 150 μa at 60 KV and increases to 250 μa below 20KV. The output is positive with respect to ground and has ripple of less than 0.5% RMS.

The UHP60P10 is controlled by an ON-OFF toggle switch and has a single turn continuously adjustable voltage control. A ±2% KV-meter reads the output voltage directly through a high voltage multiplier resistor. (Note: Model UHP60P10/L features an ammeter as well as the KV meter). The unit is provided with a 5', three wire grounded line cord and a grounding stud. A detachable 6' shielded hv-cable is provided for the main output. This Spellman power supply is current limited to 250 μa with automatic recovery to operating voltage when the overload condition is removed.

This low-cost unit is ideal for industrial applications since its small size (8"x9"x12") and light weight (16 pounds) lend themselves to portability. In addition, the UHP60P10 is housed in a portable carrying case.

ELECTROSTATIC QUADRUPOLE FOCUS POWER SUPPLY

SPELLMAN MODEL RHM10P10X

Spellman Model RHM10P10X is a specially packaged high voltage power supply designed for use with electrostatic quadrupole systems in a variety of accelerator and ion source applications. Each power supply consists of two pairs of Master/Slave modules. Each such pair of Master/Slave modules consists of a 10KV, 10 watt positive power supply and a 10KV, 10 watt negative power supply. These four modules are internally powered from a 28 volt dc source excited from the 115v, 60 hz line.

The specifications for each of the individual outputs is according to the standard catalog specifications for the RM line (see under modules) except that: 1) each positive/negative pair of outputs track each other to 1% or 50 volts, whichever is greater; 2) the output voltage is variable from 0.1 KV to 10 KVDC; 3) the maximum external load is 0.5 ma per module. The supplies are internally loaded to 0.5 ma at 10 KV to act as a sink when required.

Spellman Model RHM10P10X is designed for standard 19" rack mounting and occupies 5¼" of rack height.

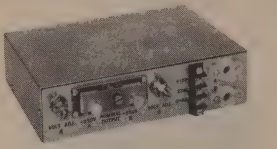
ELECTROSTATIC DYNAMIC FOCUS HIGH VOLTAGE POWER SUPPLY FOR CRT USE

RMD

The Spellman RMD is a multiple output CRT module with dynamic focusing capability. The RMD5P5D was designed to operate from 28VDC and provide not only a 3.5KV focus voltage, but also a 200 volts dynamic focus section riding on top if it. Dynamic focus rise and fall time meets the difficult specification of 3.5 microseconds. The unit measures only 3½" x 5" x 3" and weighs less than 4 lbs.

Please consult factory for further details.

DUAL OUTPUT H.V.P.S. FOR OPERATING TWO IDENTICAL PMT's



SPELLMAN MODEL WRMX—1.2N

This power supply provides two identical, well regulated high voltage outputs, each independently adjustable. In normal usage the system powers two identical photomultiplier tubes.

Each of the output voltages is adjustable from −600 to −1200 volts dc with a maximum current rating of 1 ma for each output. For an input voltage of 15 v ±10% line regulation is better than ±0.1%. Load regulation is better than 0.05% for full load change and ripple is less than 0.1% pp. After a 15 minute warm-up the unit will drift no more than ±1% for 8 hours and the temperature coefficient will not exceed 0.1%/°C. In addition, the difference in output voltages due to temperature does not exceed ±5 volts for any operating temperature in the +20°C to +55°C operating range of the power supply.

Voltage adjustment is accomplished by an easily accessible screw-adjust with resolution of better than 1% and an interlock has been provided so that one cannot remove the high voltage BNC connectors while the output voltage is present.

MILITARIZED HIGH VOLTAGE MODULAR POWER SUPPLY

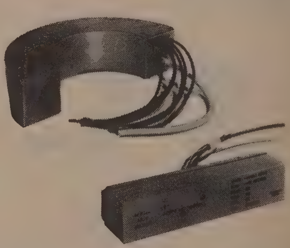
SPELLMAN MODEL RM14P7000DX

Designed to meet the environmental requirements of MIL-E-5400 and MIL-Std-810B, this power supply can operate at any of three output voltages (+10KV, +12KV, or +14KV) each voltage being rated for a maximum output current of 500 μa. Coded terminals are provided on the front of the module for simple output voltage selection.

Operated from either + or −24 vdc (and drawing less than 20 watts worst case) the power supply features line and load regulation of better than 0.5% and the ripple at full load is no worse than 0.5% RMS. The temperature coefficient of the power supply is better than 0.05%/°C for the temperature range of the power supply (−20°C to +71°C).

The power supply is housed in a cadmium plated steel case and measures 3-5/8"x6-5/8"x2-1/16".

X-RAY INTENSIFIER TUBE POWER SUPPLIES



TYPICAL SPELLMAN IMAGE TUBE POWER SUPPLIES

A variety of custom high voltage power supplies for x-ray image tube applications are available. Each of the above illustrated supplies is a multiple output device designed for a specific II tube. The rectangular supply provides outputs of 25KV, 2-3 KV, 250 vdc-1KV, and 100-300vdc. Ripple and regulation are better than 1% and the entire package measures only 1-3/4"x1-3/4"x8-3/32".

The annular shaped unit pictured above (which fits around the neck of a tube) provides the following output voltages: either 25KV or 30KV (preselectable), 2KV to 12KV (adjustable), 3KV or 3.5KV, 300vdc to 2KV (adjustable) and a fixed +400vdc. Ripple under load is better than 0.3% pp and anode, G-3, G-2, and G-1 voltages are regulated to better than ±1% for ±10% input change, 10°C ambient change and 8 hour drift after a 5 minute warm-up period.

Any of the Spellman X-Ray Image Intensifier power supplies can be designed to be consistent with U.L. approved standards according to **Standards for Safety,** X-Ray Equipment UL 187.

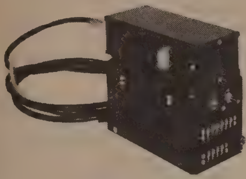
LINEAR ACCELERATOR ELECTRON GUN HIGH VOLTAGE POWER SUPPLY

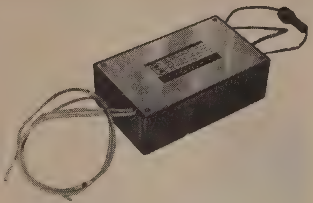


SPELLMAN MODEL RHM25N25AX

This high voltage power supply provides a regulated output for the electron gun (cathode) of a linear accelerator. The output voltage is from 0.5 to 25 KV DC in two ranges. The Low range is variable from 1-12 KV and the High range is adjustable from 15 to 25 Kv. Upon application of a 24-vdc command signal the output voltage increases towards the value set in the High mode and upon removal of this command signal the output voltage decreases to the Low mode setting. The output current capability at all voltage settings is 1 ma.

Ripple and noise for Spellman model RHM25N25 is less than 10 v pp and overall regulation/stability (temperature, line, load, time) is better than 1%. Terminals are provided for remote monitoring of the output voltage on a 100μa meter (10 volts full scale). Spellman model RHM25N25AX measures 4-1/2"x8-1/8"x6-1/2" and operates from 118v input.

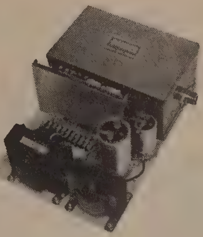
HIGH POWERED MODULAR PMT POWER SUPPLY FOR NUCLEAR AND AIRBORNE APPLICATIONS



SPELLMAN MODEL UHM1.5PN75

For airborne PMT work, the Spellman UHM1.5PN75 was designed to provide 1.5KV at 50ma and to fit in a 4"x6½"x2" case. Input requirements are 28VDC at 3.5 amps max. The output voltage is approximately proportional to the input voltage. Ripple is 5 volts peak-to-peak.

HIGHLY STABLE, HIGH VOLTAGE MODULE WITH HIGH POWER CAPABILITY



SPELLMAN MODEL RV50PX

This modular high voltage power supply operates from 115V, 50-60 hz and provides an output of from 1-50KV (continuously adjustable) at an output current rating of 1 ma.

Regulation of Spellman model RV-50PX is 0.001% for line and load variations over the operating range and ripple is 2 volts peak to peak, maximum. Drift is less than 0.005% per hour and less than 0.01%/8 hours (after a 30 minute warm-up). Repeatibility is better than 0.05% and the power supply features a temperature coefficient of 25 ppm per °C over the operating temperature range of 0 to 50°C.

Notable for the compact size from which the 50 watts of output power is delivered, this Spellman power supply measures only 10"x13"x5".

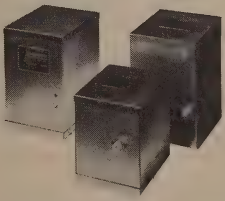
ULTOR POWER SUPPLY FOR AIRCRAFT SIMULATOR CATHODE RAY TUBE

SPELLMAN MODEL RV-40P30X

This stabilized, modular power supply was designed to provide the anode voltage for a cathode ray tube being used in an aircraft simulator. The power supply operates from 115 vac and provides +40Kv with a steady state current rating of 0.75 ma. Load regulation is ±0.05% for dynamic load variations and the power supply features an output voltage stability of better than ±0.1% independent of line, load and temperature variation for a period of at least 1 hour and better than ±0.2% for a period of 40 hours.

The power supply is provided with an output monitor voltage which is 10−4 ±5% of the actual output voltage. Peak to peak ripple of the RV-40P30X is less than 0.05% peak to peak. Per MIL-STD-454, the output decays to 30 volts within 11 seconds after turn off. This Spellman power supply measures 8.5"x8.5"x7.25" and weights less than 20 lbs.

MODULAR STYLE 10 & 30 WATT PROPORTIONAL UNREGULATED POWER SUPPLIES

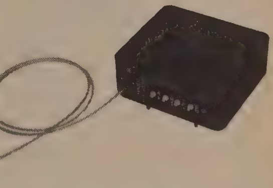


SPELLMAN MODEL UHM

Spellman engineers have built a line of 10 and 30 Watt unregulated modular style power supplies for either AC or DC input.

Spellman's UHM line was designed with 5, 10, 15, 20 and 30KV power supplies with either 10 or 30 Watt output power capability. UHM line can work from either 24VDC or 115VAC input and the output is controlled by varying the input voltage. Ripple is 0.1% of maximum voltage. The UHM line operates in air and is housed in heavy gauge aluminum cases.

MODULAR POWER SUPPLY MEETING STRICT MILITARY SPECIFICATIONS



SPELLMAN MODEL RM-10PX/MIL

A compact, light weight modular high voltage power supply was designed for use in Military applications with strict specification requirements.

The RM-10PX/MIL (one ±10KV output at up to 300 μA, one +400V output at 5 μA, together with a +400V monitor terminal capable of attachment to a microammeter to monitor the 400V output) was developed to meet strict military specifications. This model features ±0.1% line regulation and ±0.5% load regulation, with 0.25% ripple peak to peak on the 10KV output. The RM-10PX/MIL measures only 4½"x4"x2" and weights less than 2 lbs.

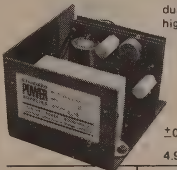
DUAL OUTPUT SPS 40D SERIES



Provides series regulated dual DC voltages for higher power requirements.

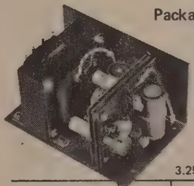
±0.1% Regulation

4.94" x 4.25" x 3.25"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*
SPS 40D-5/5	5/5	2.0/2.0	$55.00
SPS 40D-5/12	5/10-12	2.0/.8-1.0	55.00
SPS 40D-12/15	12-15/12-15	1.2/1.2	55.00

DUAL OUTPUT SPS 60D SERIES

Packaging, Efficiency



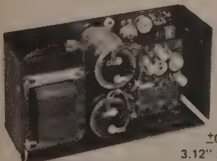
Economical, medium power, low cost.

±0.1% Regulation

3.25" x 4.12" x 6.10"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*
SPS 60D-5/12	5	3	$69.00
	10–12	1.5/1.8	
SPS 60D-12/15	12–15	1.6/1.8	69.00
	12–15	1.6/1.8	

DUAL OUTPUT SPS 90D SERIES



Top performance, compact power, isolated outputs.

±0.1% Regulation

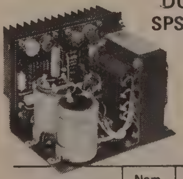
3.12" x 4.88" x 9.38"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*
SPS 90D-5/12	5	6	$89.00
	10–12	2.5–3	
SPS 90D-12/15†	12–15	3/3	89.00
	12–15	3/3	

†Shipped with 15V transformer tap connected.

DUAL OUTPUT SPS 120D SERIES

Heavy Duty



Cool performance, maximum versatility.

±0.1% Regulation

5"x 7"x 6.6"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*
SPS 120D-5/12	5	10	$139.00
	10–12	3.5/4	
SPS 120D-12/15†	12–15	5/4	139.00
	12–15	5/4	

†Shipped with 15V transformer tap connected. Requires special bracket #101868 or #101687 for overvoltage devices, @ $2.50.

DUAL OUTPUT SPS 250D SERIES

High power— high efficiency.

±0.1% Regulation

4" x 4.88" x 15"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*
SPS 250D-5/12	5	12	$179.00
	10–12	7/8	
SPS 250D-12/15†	12–15	8/6	179.00
	12–15	8/6	

†Shipped with 15V transformer tap connected.

TRIPLE OUTPUT SPS 30TA MODEL

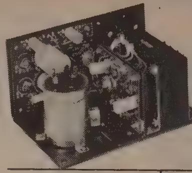
Compact power supply, provides optimum control from a single package.

±0.1 Regulation

3.44" x 4.75" x 4.12"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*
SPS 30TA-5/12/15	5 12-15 12-15	2 0.25 0.25	$75.00

TRIPLE OUTPUT SPS 50T/60T MODELS



Building block power, top performance.

±0.1% Regulation

4" x 4.88" x 7.5"

Model Number	Nom. Vdc	Max. Amps	Price 1-9*

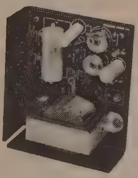
CONSTANT CURRENT SCC 30 SERIES



Compliance voltages are 15 Vdc or 30 Vdc. Regulation ranges from 0.03 to 2 Amps.

4.75" x 2.5" x 4"

Model Number	Regulation Range (Amps) & Compliance Voltage		Unit Price 1-9*
	.03 to 1A	.05 to 2A	
SCC 30-1	30 Vdc		$55.00
SCC 30-2		15 Vdc	55.00

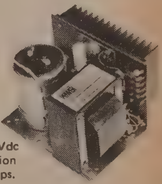
CONSTANT CURRENT SCC 60 SERIES

Compliance voltages also are 15 Vdc or 30 Vdc. Higher regulation ranges, from 0.05 to 4 Amps.

4.94" x 4.94" x 6.0"

Model Number	Regulation Range (Amps) & Compliance Voltage		Unit Price 1-9*
	.05 to 2A	0.1 to 4A	
SCC 60-2	30 Vdc		$84.00
SCC 60-4		15 Vdc	84.00

CONSTANT CURRENT SCC 120 SERIES



Compliance voltages are 8 Vdc or 30 Vdc. Greater regulation ranges—from 0.1 to 12 Amps.

5" x 7" x 6.60"

Model Number	Regulation Range (Amps) & Compliance Voltage		Unit Price 1-9*
	0.1 to 4A	0.1 to 12A	
SCC 120-4	30 Vdc		$125.00
SCC 120-12		8 Vdc	125.00

Also available: Model SCC 250-15. Range: 0.1 to 15A @ 15 Vdc. Price (1-9*): $225.00.

ISO-PAK™ The Miracle Module

The properly designed and applied DC/DC Converter can be just the Miracle Module that will cause a troublesome Circuit to work properly and reliably. Stevens-Arnold understands this and our Converters have been designed with Reliability and ease of application as the foremost considerations. They will solve difficult System problems without creating new ones.

Our Iso-Pak Converters will increase Efficiency, reduce Size, and eliminate 115 VAC Harness and Pick Up problems. At the same time they will break up Ground Loops and provide superb isolation.

Ask for our Catalogs. Here you will find all of our Iso-Pak Specifications because we have nothing to hide and much to be proud of.

Note that we supply complete information on 35 Parameters including unretouched Oscilloscope photos of Noise Wave Forms plus detailed Graphs of important Specifications such as Output Voltage Temperature Coefficients, Efficiency vs. Load, and Module Surface Temperature.

For 32 years our philosophy has been "More Creative Design produces a better Product at a Competitive Price."

High Power Efficiency

A 50% Power Density improvement (3.3 watts/cubic inch) and profile reduction (0.375" H) is now a reality in comparison to competing devices having 1.4 watts/cubic inch and 0.875" H profile. The Stevens-Arnold special Package design and high Efficiency Converter and Regulator circuitry have reduced the internal Package Power dissipation by greater than 35%. This allows double the Power Density while still maintaining a Surface Temperature rise above ambient of less than 10 °C per package watt dissipated.

Applications Information

Get in touch with us today. Request this helpful information plus our Short Form Catalog which lists hundreds of Models.

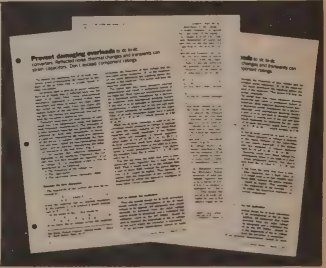
Tips on Specifying Modular Plug-in DC/DC Converter Power Supplies

Determine Noise of DC/DC Converters

Uninterruptable Power for Volatile Semiconductor Memories

Prevent Damaging Overloads to DC/DC Converters

DC/DC Converters for Strain Gage Applications



Prevent damaging overloads to dc to-dc converters. Reflected noise, thermal changes and transients can strain capacitors. Don't exceed component ratings.

TECHNIPOWER POWER SUPPLY LINE SUMMARY

EXTREME ENVIRONMENT MIL-QUALIFIED ENCAPSULATED SERIES

Series stabilized AC-DC power supplies for high temperature, high shock applications

PM-95 SERIES – 3-325 VDC, power up to 800 watts, base rated at 95°C.
F/FD-115 SERIES – 3-325 VDC, power up to 500 watts, base rated at 115°C.

MODERATE ENVIRONMENT ENCAPSULATED STABILIZED AC-DC SERIES

Lower cost lines designed for less stringent Mil-environment, industrial and commercial applications

P-80 SERIES – 3-325 VDC, power up to 800 watts, base rated at 80°C.
MC-65 SERIES – 3-152 VDC, power up to 750 watts, base rated at 65°C.
PL-80 SERIES – 3-152 VDC, power up to 75 watts, based rated at 80°C.
DP/TDP-80 SERIES – Dual output for op-amp applications. 6-150 VDC, power up to 10 watts, base rated at 80°C.
NP-80 SERIES – NON-STABILIZED – 3-1,000 VDC, power up to 975 watts, base rated at 80°C.

"THE PRACTICALS" OPEN FRAME STABILIZED AC-DC SERIES

Lowest cost, high performance lines designed for OEM applications

NLP/NLPC SERIES – Single and dual output. 5-28 VDC, power up to 28 watts, ambient rated to 71°C.
LP/LPC SERIES – Single and dual output. 5-28 VDC, power up to 224 watts, ambient rated to 71°C.

HIGH EFFICIENCY STABILIZED AC-DC SWITCHING SERIES

High density, wide output AC-DC units designed for tight packaging or critical thermal applications

HF/HFC-80 SERIES – Encapsulated 115 VAC or 150 VDC source primary switchers, 3-1,000 VDC, power up to 375 watts, base rated at 80°C with efficiencies to 80%.

CL/CLC SERIES – Open construction primary switchers for 115 and 230 VAC or 150 and 300 VDC sources. 3-32 VDC, power up to 256 watts, ambient rated at 71°C with efficiencies to 75%.

RA-80 SERIES – Encapsulated 115 VAC secondary switcher. 0-160 VDC, power up to 1,000 watts, base rated at 80°C with efficiencies up to 80%.

EF SERIES – Open construction 115/230 VAC primary switcher. 4.5-30 VDC, power up to 300 watts, ambient rated to 71°C with efficiencies of 70-80%.

HIGH EFFICIENCY STABILIZED DC-DC CONVERTERS

High density, isolated input to output units for vehicular, aircraft, marine and standby power applications

CD/CDC-95 SERIES – Encapsulated for extreme mil-environments. 3-1,000 VDC, power up to 280 watts, base rated at 95°C with efficiencies up to 80%.

CL/CLC SERIES – Open construction for 12, 28, 48, 150, 300 VDC source applications. 3-32 VDC, power up to 256 watts, ambient rated to 71°C with efficiencies to 75%.

DC-DC "POINT OF LOAD" SERIES STABILIZERS

Low cost, versatile miniaturized flat pack design permits card type mounting

CX-95 SERIES – Positive and negative series regulators. 3-24 VDC, power up to 96 watts, base rated at 95°C, ambient rated to 85°C.

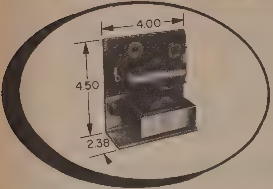
DC-AC ENCAPSULATED SINE WAVE INVERTERS

For UPS systems, frequency changers, and other applications requiring stabilized sine wave power from DC sources.

NAC/NACD-80 SERIES – For 24 and 28 VDC sources. 115 V rms output for 60 and 400 Hz applications, power up to 500 VA, base rated at 80°C.

This is Tele-Dynamics

Tele-Dynamics is an autonomous division of AMBAC Industries, Incorporated, Commercial and Aerospace Electronics Group. AMBAC Industries, listed on the New York Stock Exchange, is an international company with worldwide capabilities in several growing high-technology product areas. The Tele-Dynamics plant is a modern building located on 10 acres of land in the Fort Washington Industrial Park, Fort Washington, Pa. Power supplies and line conditioners, digital communications equipment, airborne telemetry components and systems, shipboard weapon switching systems, and other special applications equipment are many of the products designed and manufactured by the division. These products, the people who build them, and the plant are all integrated into an efficient team—geared to meet the challenge of today's expanding technologies.



DPS SERIES

20 watt OEM supplies UL listed.

MODEL	INPUT VOLTAGE	DC OUTPUT	PRICE 1-9	PRICE 10-24	PRICE 25-49	PRICE 50-99

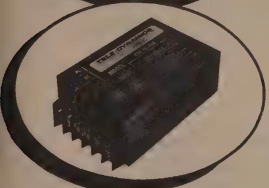
TW SERIES



CT SERIES

TW/CT SERIES

MINIATURE DC POWER SUPPLIES

The TW and CT series of miniature power supplies are rugged modular assemblies that provide well-regulated, reliable DC power. The TW supplies are designed for mounting to PC boards. Electrical connections can be made either with connector pins or by soldering. The CT supplies are intended for chassis mounting and each CT supply is equipped with a terminal block for electrical connections. All models have threaded inserts for securing the units to the mounting surface.

Single, dual or triple output

GENERAL SPECIFICATIONS

Input voltage: 115 ±10 VAC*
Input frequency: 50 to 400 Hz
Input isolation: 50 megohms
Output impedance: 0.2 ohms at 10 kHz
Output voltage setting: ±2% of rated voltage
Storage temperature: -25 to +85° C
Operating temperature: -25 to +71° C
Temperature coefficient: 0.02%/° C

Output current vs temperature: Each output is rated for full current at temperatures between -25° and +70° C with no derating.

CASE SIZES

1. 2 x 3 x 1
2. 1.75 x 2.25 x 1
3. 2.50 x 3.50 x 0.88
4. 2.50 x 3.50 x 1.25
5. 2.50 x 3.50 x 1.62
6. 2.50 x 3.50 x 1.88
7. 2.70 x 4 (plus 0.38 for terminal block) x 1.44

*add $5.00 to unit price for 230 VAC input power

Interchangeable with Lambda LM series

SPECIFICATIONS

AC Input: 105-125/210-250,AC, 57-63 Hz (derate at 50 and 400 Hz)
Regulation:
Line: ±0.05%
Load: ±0.05%
Ripple: 1 millivolt rms
Ambient operating temperature: 0° to 71°C (see rating charts)
Storage temperature: -55° to +85°C

FEATURES

Current cutback, overload and short circuit protection
Remote sensing—Remote programming
Voltage adjust
Input/output connections via heavy duty terminal block
Optional OVP

BRUTE SERIES ADJUSTABLE DC POWER SUPPLIES

300, 600 and 1200 watt models

- Greater than 75% efficiency
- Remote sensing
- Adjustable constant current operation 0-100%

SPECIFICATIONS

AC input: 105-130/210-260 volts AC, 1ϕ, 47 to 63 Hz
DC output: See table for models
Voltage: Adjustable in two ranges, 5 to 50 volts or 2 to 25 volts (reconnectable)
Current: to 50 amperes
Regulation:
Line: ±0.1% or 50 mv
Load: ±0.1% or 50 mv
Ripple: 1% or 500 mv rms max
Overload protection: By adjustable current limiting
Overvoltage protection: Optional OVP-1
Controls: Current limit adjust 0 to 100%
Output voltage adjust 10 to 100%;
Ripple adjust
Temperature: 0 to 55°C with convection cooling
Weight: 300 watts-20 pounds; 600 watts-30 pounds; 1200 watts-50 pounds

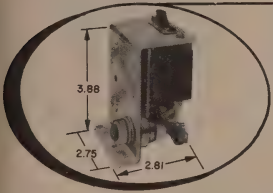
SPECIFICATIONS

AC input: 100-130 volts AC, 1Ø, 57-63 Hz (derate 20% at 50 Hz)
DC output: See table for models
  Voltage: 3.6 to 60 volts, floating
  Current: to 25 amps
Regulation:
  Line: ±0.10% or 10 mv
  Load: ±0.10% or 10 mv
Ripple: 5 mv rms max
Overload protection: Adjustable foldback current limiting
Overvoltage protection: Optional OVP crowbar
Line fuse: Internally fused at 2.5, 5, or 10 amps slow blow
Controls: Output voltage adjust ±5%
  Current limit adjust
Temperature: 0 to 45°C (70°C with 2%/°C derating from 45°C)
Response time: 50 to 100 microseconds (depending on model)
Weight: 60 watt-9 pounds; 120 watt-14 pounds; 200 watt-19 pounds
Remote sensing

OPTIONS

Crowbar overvoltage protection
  Model 1A—3.9 to 5.8
  Model 2A—6.4 to 8.0
Trip voltage: Adjustable over specified range



OVP OVERVOLTAGE PROTECTION DEVICES

OVP-1

QUANTITY	PRICE
1-9	$60.00
10-24	$57.00
25-49	$54.00
50-99	$51.00

SPECIFICATIONS

DC current range: 0.5 to 50 amperes dc (200 amperes peak with 8-millisecond surge).
Shutdown time: Protects power supply and line in 10 milliseconds (typical).
Response time (inverse time delay): Protects load in 2 microseconds when wired for dc-break, local-sense operation.
DC voltage range (supply output): 3.6 to 50 vdc.
Trip voltage range (adjustable): 6.5 to 60 vdc.
Circuit breaker ratings:
  DC line: 50 amps at 50 vdc
  AC line: 50 amps at 250 vdc

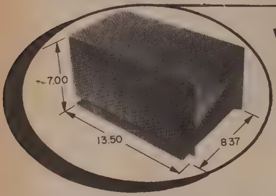
VARAX® AC LINE VOLTAGE REGULATORS

Solve brown-out problems

- Efficiency greater than 90% at full load
- High reliability; no semiconductors in AC path
- True rms regulation
- Insensitive to line frequency changes
- 1% Regulation, line and load

Varax employs a closed loop feedback system which utilizes the parametric energy concept to vary an inductor in series with the AC line. This increase or decrease in inductance permits control over wide ranges of line input fluctuations. This permits optimum performance of equipment under changing input conditions such as "brown-out", or in-plant line voltage variations.



Dimensions shown are for LR-500 and LR-1500 Series

VARAX® LR SERIES

SPECIFICATIONS

AC input: See table of models
AC output: See table of models
Output Power:
LR-500 series: 500 VA
LR-1500 series: 1500 VA
LR-5000 series: 5000VA
Regulation:
Line: ±1%*
Load: ±1%*
Response time: 50 milliseconds
Power efficiency: Greater than 90%
Distortion: Less than 5%
Controls: Output voltage adjust ±3%
Operating Temperature: 0° to 55° C
Weight:
LR-500 series: 31 pounds
LR-1500 series: 49 pounds
LR-5000 series: 170 pounds

VARAX® C474

SPECIFICATIONS

AC input: 105-130 volts AC, 1Ø, 47-63 Hz
AC output:
Voltage: 120 volts AC, adjustable ±3%
Power: 2000 VA
Regulation:
Line: ±1%
Load: ±1.5% (25% to full load)
Type: True rms
Response time: 50 milliseconds
Efficiency: Up to 90% at full load
Temperature: 0 to 55°C
Weight: 38 pounds
Controls: Voltage adjust ±3%
Distortion: 20% max. at high line
Phase shift: Varies with load
Load requirements: Unique characteristics of unit require best operation with combination inductive/resistive load. Required inductive load is 1.8 to 3.6 amps. For purely resistive load, use BI-1500 ballast inductor to add inductance. Inductive load should have a lagging power factor of 0 to 0.75.

MODEL	PRICE

PARAFORMER® AC LINE CONDITIONERS

Transient-filtered line conditioning

- **Attenuates noise; filters 50 db to 1 MHz**
- **± 1.0% line regulation**
- **±1.5% load regulation**
- **Bilateral filtering**
- **Inherent short circuit and overload protection**

Tele-Dynamics Paraformer is a new and unique method of energy transfer which utilizes parametric coupling instead of magnetic coupling. This technique regulates and filters out noise, transients, and other unwanted spurious signals from AC lines, thus permitting optimum performance of end equipment.

SPECIFICATIONS

AC input: 105-125 volts AC, 1Φ, 60 Hz
AC output: See table of models
- **Voltage:** 117 ±2 volts AC, 1Φ, 60 Hz
- **Power:** 60 to 1000 VA

Regulation:
- **Line:** ±1.0%
- **Load:** ±2.0%

Response time: Instantaneous
Power Efficiency: 65%
Temperature: 0 to 55°C
Protection: Inherent overload and short circuit protection
Weight: See table of models, 9 to 90 pounds
Controls: Start pushbutton (some models)

SPECIAL FEATURES

Noise attenuation (filtering): 50 db 0 to 1 MHz
Transient suppression: Suppresses transients with rise times as fast as 1 microsecond (50 db)
Phase shift: 90 degrees

CLIPAC® AC VOLTAGE REGULATORS

Models from 30 to 1000 VA

Clip-Ac is a line voltage regulator that symmetrically clips the peaks of unregulated input voltage to produce a constant output voltage. This results in a constant regulated output voltage to allow equipment to perform at optimum under varying line conditions.

AC input: 100-130 volts AC, 1Φ, 47-420 Hz
AC output:
- **Voltage:** 135 volts peak ±10% (270 volts peak to peak)
- **Power:** 120 VA

Regulation:
- **Line:** ±1.0% for 10% line variations
- **Load:** ±1.0%
- **Power factor:** ±1.0% (+0.7 to -0.7)
- **Type:** Peak clipping

Response time: 10-50 microseconds
Efficiency: 75% min. at nominal input voltage and full load
Temperature:
- **Operating range:** 0 to 40°C (to 70°C with 2%/°C derating from 40°C)
- **Temperature coefficient:** 0.025%/°C

Weight: 10 oz.
Controls: Output voltage adjust ±10%
Phase shift: None

SPECIFICATIONS

AC input: 100-125 volts AC, 1Φ, 47-420 Hz
AC output: See table of models
- **Voltage:** Adjustable 117 volts AC ±3%, 1Φ
- **Power:** 30 to 1000 VA

Regulation:
- **Line:** ±0.5% (10% line change)
- **Load:** ±0.5% (10% to full load)
- **Type:** True rms (uses peak clipping)

Response time: 10-50 microseconds
Efficiency: 75% nominal, full load
Temperature: -20° to +50°C (temperature coefficient +0.025%/°C)
Protection: Internally fused, (see table of models for values)
Weight: See table of models, 1.5 to 17.5 pounds
Controls: Output voltage adjust ±3%

High initial surge current capacity

The Power Conversion Specialists

DC-DC HIGH EFFICIENCY REGULATED CONVERTERS, 28Vin and 48Vin

150 WATT/3150 SERIES
100 WATT/3100 SERIES
50 WATT/3050 SERIES
25 WATT/3025 SERIES

Tecnetics 3000 Series have efficiency up to 82%. Input voltages of either 48VDC or 28VDC with output voltages of from 5 to 48VDC are available. Low output impedance (both static and dynamic), input-output isolation, excellent line, load and temperature regulation, remote error sensing, together with short circuit and overload protection are some of the features of these units.
Stock to 6 weeks delivery

SPECIFICATIONS

Input:
Voltage: 3100-28-xxx
3050-28-xxx
3025-28-xxx
28VDC nominal
Range: 21.5 to 32VDC, continuous
36VDC for 5 sec. max.
Reverse protection to 100VDC
Voltage: 3150-48-xxx
3100-48-xxx
3050-48-xxx
3025-48-xxx
48VDC nominal
Range: 42 to 56VDC, continuous
65VDC for 5 sec. max.
Reverse protection 10 100VDC

Output:
Voltage and Current: (see chart)
Voltage adjustment: ±5% by screwdriver control accessible through hole in cover.

Regulation:

Line (Low to High):	0.3%
Load (1/2L to FL)	0.1%
Load (NL to FL)	0.4%
Temperature	0.005%/°C typical 0.01%/°C max.

Ripple:
V (peak to peak) less than ±1% of rated output voltage.
Frequency: 50KHz ±10%

Load Transient Recovery Time:
No load to full load recovery time < 150μsec. under shoot less than 5%.
Full load to 25% load recovery time < 150μsec. over shoot less than 4%.
Full load to 3% load recovery time < 1.0 msec.

Impedance:
0.003 ohms/volt output, 0-10KHz
Remote Error Sensing:
Separate remote sensing terminals are provided. This feature will correct for load lead voltage drops of ≤ 10% V out.

Polarity:
Output is isolated; either output terminal may be grounded.

Protection:
Overload and short circuit of any duration by current limit. Overvoltage (option)

Isolation:

Input to output	1000VDC
Input to case	500VDC
Output to case	500VDC

MTBF:
25,000 hrs.
Calculated per MIL-HDBK-217 at 70°C base plate temperature.

Environmental:
Operating temp. −55°C ambient to +90°C case
Storage temp. −55°C to +105°C
Vibration, shock, humidity and altitude: designed to meet the requirements of MIL-E-5400.

EMI:
Input filter reduces reflected power line ripple.

Mechanical (3150 and 3100):
Dimensions: 6 x 4 x 2¼ inches
Terminals: Turret solder type and barrier strip
Case: Aluminum with black anodize finish
Encapsulation: Elastomeric silicone
Weight: 60 oz. fully encapsulated

Mechanical (3050 and 3025):
Dimensions: 4x4x2 inches
Terminals: Turret solder type
Case: Aluminum with black anodize finish
Encapsulation: Elastomeric silicone
Weight: 36 oz. fully encapsulated

Price: (single quantity)

Model 3150-48-xxx	$500.00
3100-48-xxx	$450.00
3100-28-xxx	$450.00

tecnetics
The Power Conversion Specialists

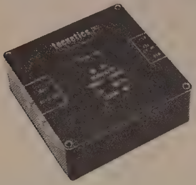
DC-DC REGULATED CONVERTER, 28Vin

10 WATT/9584 SERIES / 25 WATT/9525 SERIES

The Tecnetics 9525 Series is available in single, dual and triple outputs to operate from 28 or 48VDC input. The input filter reduces conducted EMI, thereby providing low noise reflected to the power source. It has excellent line, load and temperature regulation. The output is characterized by low impedance, both static and dynamic.

The 10 Watt 9584 Series provides output voltages 5 Volts up to 5000 Volts from a 28VDC source. Single and dual output voltages are available. These ruggedized units have 1.65 Watts per cubic inch resulting in a small package. Encapsulated in silicon rubber and designed to meet extreme environmental conditions encountered in military applications these units have demonstrated their capability and reliability in hundreds of systems.

Stock to 4 weeks



SPECIFICATIONS (9525 SERIES)

Isolation:
Input to output 1000VDC.

Efficiency:
50% typical at full load under nominal conditions.
(Vin = .28VDC, Vout = NOM., and Ta = 25°C).

MTBF:
Calculated per MIL-HDBK-217 at 85°C case temperature.
Single output units 40,000 hours.
Double output units 30,000 hours.
Triple output units 20,000 hours.

Environmental:
Operating temp. −55°C ambient to +100°C case.
Storage temp. −55°C to +150°C.
Case rise 60°C in free air at full load.
Vibration, shock and altitude (designed to meet the requirements of MIL-E-5400).

EMI:
Input filter reduces reflected power line ripple 50 db from input voltage.

Price:

Single Output	$250.00 ea.
Dual Output	295.00 ea.
Triple Output	365.00 ea.

SPECIFICATIONS (9584 SERIES)

Input Voltage:
28VDC ±VDC continuous
40VDC 1 sec. max.

Protection:
Reverse polarity protected to 50VDC

Input Current:
120 mA typical @300 mW load
750 mA typical @ full load

Minimum Load:
300 mW
Output Voltage Adjust:
±10% full load
−40% 3.3 watt (See "Power Derating Curve".)

Isolation Test Conditions:
Input terminals shorted to case. Output terminals shorted together.
Models 102-114, 121-124 1000VDC
Models 115-120 5000VDC

Polarity:
Inputs and outputs are isolated from each other. Filter is in positive leg. For negative filter, prefix part number with "N" (i.e., N9584-114).

Temperature Range:
Operating −55°C ambient to +100°C case
Storage −55°C to +150°C
Case Rise 30°C full load typical

Frequency:

Operating	3KHz ±20%
Ripple	6KHz ±20%

Weight:
9.6 oz. fully encapsulated

Environment:
Designed to meet the requirements of MIL-E-5400

Modifications:
Contact field representative or phone Tecnetics for modifications such as different inputs, outputs and changes in termination.

Short Circuit Protection by Current Limit 9586 Series
To order specify 9586 and add appropriate model number from 9584 Model Specifications chart.
Example: 9586-102
Delivery: 4 weeks
Price: add $25 to comparable 9584 model. "Volts Adj." potentiometer is relocated on 9586 units.

The Power Conversion Specialists

400Hz AC to DC POWER SUPPLIES

3 PHASE/25, 50, 100 WATT 4000–3 SERIES

This high technology, state-of-the-art 4000 Series provides efficiencies up to 86% in 25, 50 and 100 Watts of power conversion from 3 phase 400Hz 115VAC input. Three phase input provides for better power management. Easy to adjust controls for desired output voltage are provided on the upper surface of the units for convenience.

SINGLE PHASE/25, 50, & 100 WATT 4000 SERIES

The 4000 Series is a true high technology 400Hz AC input to DC output power supply. High efficiencies—up to 86%—are available in 5 to 48VDC output in 25, 50 and 100 Watts of power with excellent line, load and temperature regulation. All internal heat producing elements are heatsunk to the base plate and the unit is black anodized for improved heat radiation. Easy to adjust controls are on the upper surface for adjustment to the desired output voltage. Remote error sensing assures that this voltage is at the point of load, compensated for any drop in the cable. Low output impedance, both static and dynamic, are inherent in the design. Low noise is reflected back to the line as a result of input filters, which also reduce conducted EMI.

SPECIFICATIONS:

Input Voltage (rms):
103.5-126.5VAC (NL-FL)
92.0-126.5VAC (NL-½L)
180.0VAC for 0.1 sec. max.

Frequency:
360 to 440Hz, 3 phase, Y

Output:
Voltage & Current (See chart.)
Voltage Adjustment: ±5%—By screwdriver control. Accessible through hole in cover.
Regulation: Line (115V rms ±10%) 0.2%
Load (NL to FL) 0.5% (½L to FL) 0.1%
Temperature 0.005%/°C typical
0.01%/°C max.

Ripple:
V (peak to peak) 2%
Frequency 60KHz ±10%

Load transient recovery time:
No load to full load recovery time < 100 μSec under shoot < 4%
Full load to 25% load recovery time < 50 μSec over shoot < 3%
Full load to 2% load recovery time < 1ms over shoot < 3%

Impedance:
(0-10KHz): 0.002Ω/Vout

Remote Error Sensing:
Separate remote sensing terminals are provided. This feature will correct for load lead voltage drops of ≤ Vout.

Polarity:
Output is isolated; either output terminal may be grounded.

Protection:
Overload and Short Circuit:
115 to 130% of rated current
Overvoltage (option):
115 to 130% of nominal voltage

Isolation:

Input to output	1000VDC
Input to case	500VDC
Output to case	500VDC

(Note: Input terminals shorted together, output terminals shorted together)

Efficiency:
(see chart & graph)

MTBF:
30,000 hours.
Calculated per MIL-HDBK-217 at 70°C base plate temperature, airborne environmental factor.

Environmental:
Operating temp.: −55°C ambient to +100°C case
Storage temp.: −55°C to +125°C
Case Rise: See graph
Vibration, shock, humidity and altitude: Designed to meet the requirements of MIL-E-5400.

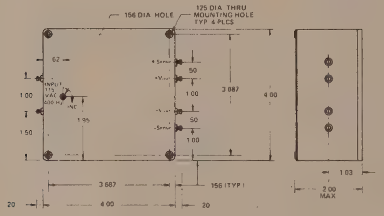
EMI:
Input filter reduces reflected power line ripple.

Mechanical:
Dimensions: Model 4025: 4x4x2 inches
Model 4050: 4x4x2 inches
Model 4100: 5x4x2 inches
Terminals: Teflon-insulated turret solder type. Or barrier strip for 4100-3
Encapsulant: Elastomeric silicone.
Weight: Model 4025: 36 oz.
Model 4050: 36 oz.
Model 4100: 44 oz.

Price (each):

Model 4025-3-xxx	$395.00
4025-xxx	395.00
4050-3-xxx	425.00
4050-xxx	425.00
4100-3-xxx	450.00
4100-xxx	450.00

25 and 50W



Note:
1. Unless otherwise noted all dimensions are ± .020.

100 W

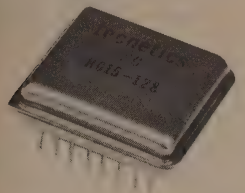
tecnetics

The Power Conversion Specialists



MINIATURE DC-DC CONVERTERS
HCN, HCH, HCE SERIES

Tecnetics new HC Series operates from an input range to optimize performance. A number of input and output voltages are available and can be selected from the chart for your application. Other voltages are available on special order at standard prices in an input voltage range of 5-28VDC and an output voltage range of 5-300VDC. Customized hybrid DC/DC Converters can also be supplied. Put these unique, small hybrid converters to work in your application.

SPECIFICATIONS:

Input:
Voltage: See Table

Output:
Minimum Load: 300 mW
Output voltage varies directly with the input voltage over specified range.
Regulation: Line Unregulated
Frequency, Nominal Operating:
14KHz (except 11KHz for 5V and 6V input models)

Polarity:
Single output units may be used as positive or negative voltage.
Double output units have common return.

Isolation:
Input to output 600VDC max.

Environmental:
Operating temp. −55°C ambient to +125°C case
Storage temp. −55°C to +125°C
Case Rise typical 40°C/W dissipation

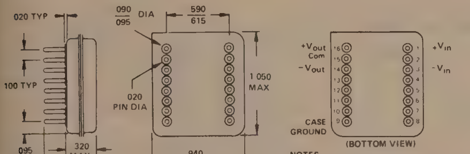
Mechanical:
Package: Nickel plated Kovar available in three options:
HCN—non-hermetic for industrial and commercial applications.
HCH—Hermetic for military, space and industrial applications which require protection from extreme environmental conditions such as called out in MIL-E-5400.
HCE—Encapsulated for applications which require protection from extreme shock and vibration.

Weight:
HCN, HCH-0= -0.35 oz. HCE—0.45 oz.

Prices and Ordering:
Single Quantity: Non-Hermetic (HCN) $49
Hermetic (HCH) $59
Encapsulated (HCE) $69

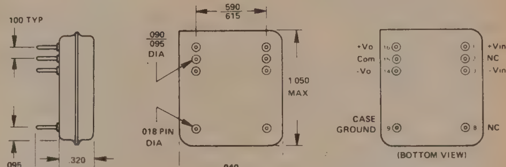
Modifications:
Input and output voltage modifications within the limits of tabulated values are made for no cost increase. Output voltage set point at other than full load or at increased accuracy available for slight cost increase.

HERMETIC AND ENCAPSULATED PACKAGE



NOTES
1. Pins 14 and 15 connected internally on single output versions.
2. Pins 2, 4, 5, 6, 7, 8, 10, 11, 12, and 13 are NC.

NON-HERMETIC PACKAGE



NOTE
Pins 14 and 15 connected internally on single output versions.

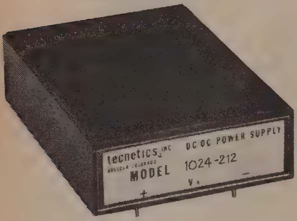
10 WATT 1000 SERIES
6 WATT 1600 SERIES
3 WATT 1300 SERIES
1 WATT 1100 SERIES



DC-DC REGULATED CONVERTERS

10 WATT 1000 SERIES

Tecnetics newest member of the 1000 Series boasts 10 Watts of power in the same small size package as our 6 Watt Series. Higher conversion frequency and improved circuitry make for this improved efficiency and smaller size while maintaining the quality features of the 1000 Series. Single, dual, and triple outputs, each post regulated, are available in from 5, 6, 12, 24, 28 and 48VDC inputs. Low output impedance (both static and dynamic) provide the near ideal power needed today. Excellent line, load and temperature regulation.

6 WATT 1600 SERIES

6 Watts of high performance at economy prices is available in Tecnetics 1600 Series DC to DC Converters. Post regulation provides excellent line/load regulation. A choice of PC mount or through the unit mount accommodate many applications in industry. All output voltages have individual returns with grounds isolated from each other and are also short circuit protected. Input filters reduce EMI. Units are available in single, dual or triple outputs from all popular voltages available for input.

3 WATT 1300 SERIES

The best mechanical package available in a high performance 3 Watt DC to DC Converter at economical prices characterizes the Tecnetics 1300 Series. Low output impedance (both static and dynamic) with the output voltages protected by current limiting make these units an ideal choice for commercial/industrial applications. Input filters reduce EMI. A wide range of input and output voltages are available as standard products. All internal heat generating devices are tied to the black anodized plate. Mounting of the unit may be by pins to a PC card or by use of through the case mounting holes provided.

1 WATT 1100 SERIES

High performance in an economical, small package is seen in the 1 Watt 1100 Series DC to DC Converter. All the popular input voltages 5, 6, 12, 24, 28 and 48VDC are available with output voltages from 3.6 to 24VDC together with dual output voltages. Each output voltage is regulated resulting in excellent line, load and temperature regulation. All output voltages are protected by current limiting. Input filters reduce EMI (conducted) radiation.

SPECIFICATIONS:

Input:
Voltage:
See table for value.
Reverse polarity protected to 100VDC (except on 5V & 6V input models.)
Reflected ripple voltage 80 mV (P-P) at 32 KHz ±20% with a source impedance of 0.1 Ohms.
Current: Varies with input voltage.

Output:
Voltage and Current (See chart.)
Voltage Adjustments: Set at factory within 0.5% of stated output.
Regulation:

Line (Low to High)	0.1% max.
Load (NL to FL)	0.3% max.
Temperature	0.007%/°C (typical) 0.015%/°C max.

Ripple: V (P-P) less than 1.0% of rated output voltage
All outputs may be used as either positive or negative supplies.
Protection
Overload.
Short circuit by current limiting.

Isolation:
Input to output

MTBF:
Single output units 35,000 hours.
Dual output units 25,000 hours.
Triple output units 15,000 hours.

EMI:
Input filter reduces reflected power line ripple.

Environmental:
Operating temp.: −20°C ambient to +100°C case
Storage temp. −55°C to +150°C.

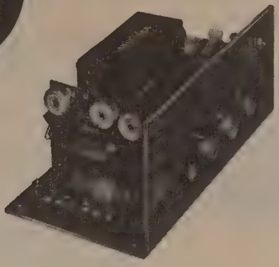
THE todd . . . hi-performance OEM type power supplies!

UX SERIES



OVERVOLTAGE PROTECTION:
Standard on all units thru 24 volts!

SPECIFICATIONS:

INPUT: 105-132 Volts AC 47-440 Hz.

OUTPUT: Floating, isolated from ground, 300 VDC max.

REGULATION: Line or Load .05% +5 MV for rated change

RIPPLE: 1 MV RMS, 5 MV P-P

TEMPERATURE COEFFICIENT: .02%/°C

OVERLOAD PROTECTION: Automatic electronic current limiting foldback

REMOTE SENSE: Sense terminals provided for compensation of external wiring drop for up to ½ volt.

TODD HI-PERFORMANCE MODULAR POWER SUPPLIES

SPECIFICATIONS

NPUT: 105-132 Volts AC 47-420 Hz.

UTPUT: Floating, isolated from ground, 300 VDC max.

EGULATION: LINE: .01% or 1 mv whichever is greater, for rated input line voltage-changes.
LOAD: .01% or 1 mv whichever is greater, for no-load to full-load change at any output within specification.

IPPLE: Less than .5 mv or .001% rms, 5 mv or .01% Peak o Peak.

TABILITY: .02% or 10 mv, whichever is greater, for 8 hrs., fter 30 min. warmup. Measured at constant input line, load nd Amb. Temp.

EMPERATURE COEFFICIENT: (.02% + 100 uv)/Deg. C.

EMPERATURE RANGE: OPERATING: — 20 to + 71 Deg. C. (see power rating chart)
NON-OPERATING: — 55 to + 85 Deg. Centigrade.

ECOVERY TIME: 50 Microseconds to within 50 mv of reguation spec for no-load to full-load change.

EMOTE PROGRAMMING: RESISTANCE: 1000 ohms/volt.
VOLTAGE: 1 volt/volt.

EMOTE SENSING: The amplifier is capable of compensating or a 1 volt load lead loss and still maintain regulation at the oad. An additional 1 volt is available at the output if local ensing is used.

VERLOAD PROTECTION: Fixed, automatic, electronic current imiting, limits output current for overload and short circuit onditions. Automatic recover upon removal of fault condition.

VERVOLTAGE PROTECTION (OPTIONAL): Adjustable overvoltge protection, mounts externally.

ODE OF OPERATION: Constant Voltage with automatic curent limit.

ONTROLS: Recessed screwdriver adjust over output range.

ONNECTIONS: Barrier Strip.

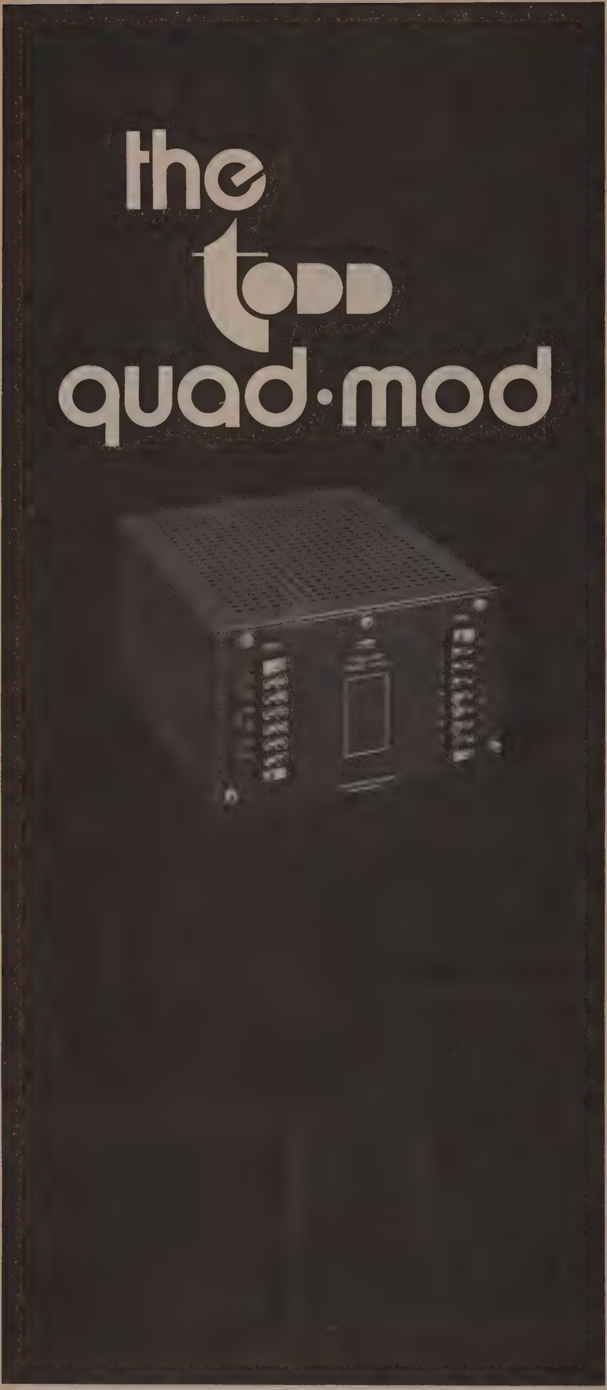
THE STANDARD TODD 5-YEAR WARRANTY ON PARTS AND LABOR APPLIES TO ALL UNITS

TODD PRODUCTS CORP. • 123 MILBAR BLVD., FARMINGDALE, N.Y. 11735 • (516) 293-3440 • TWX: 510-224-6584



The Todd Quad-Mod Series is designed to provide a wide range of system power for multiple voltage level requirements. The incorporation of the Quad-Mod Series in a typical application will replace up to four separate power supplies with a single package, smaller in size, lighter in weight, and lower in cost. The single package reduces system complexity by the elimination of redundant power line wiring and multiple unit installations.

All power supplies in the Quad-Mod Series contain a dual tracking output providing a positive and negative tracking output voltage. The negative supply will track the positive supply, but does not have to be of the same current rating. Because of the tracking feature, only the positive supply is provided with a voltage adjustment. The negative supply is factory-set to within 2% of the positive.

... a new

The **two output module** consists of a dual tracking output.

The **three output module** consists of a dual tracking output plus an additional separately controlled positive output.

The **four output module** consists of a dual tracking output, a separately controlled positive output, and a floating output that is separately adjustable and can be operated either isolated from the system common, or connected as a positive or negative supply.

All outputs are provided as constant voltage outputs. Each output is protected against overload and short circuit by an electronic current limiting foldback circuit with automatic reset upon removal of the short circuit or overload.

Remote sense provisions are available for any or all outputs where critical correction of wire drops is required in the system. Protective circuits are incorporated to prevent the output voltage from becoming high unregulated if a sense lead is not terminated.

The unique "thermo-isolar" package design allows the Quad-Mod Series to operate in ambient temperatures up to 71°C without the use of supplementary heat sinking or forced air cooling.

TABLE I: Available Ratings

Nominal Voltage	Voltage Range	Current Ratings (50°C)				
		M	A	B	C	D
5	3.8-4.5	0.8	3.3	4.7	7.0	14

power supply concept!

TABLE I: Shows the current ratings available for each nominal voltage. The shaded areas of the table show the reduced current ratings for extended output voltage range operation. The currents are tabulated by a letter series. To specify the rating of an output it is only necessary to specify the nominal voltage (ex. "5") and the current letter (ex. "C") to completely specify an output rating (ex. "5C" is a nominal 5 volts @ 7.5 Amps). Consult factory for ratings not shown.

TABLE II: Shows the combination of outputs that can be incorporated in each case size.

HOW TO ORDER—
(1) Select required output ratings from Table I
(2) Establish Case Size and Price from Table II
(3) Establish Model Number as follows:

Q 5C – 15A 15C – 24M

Series "QUAD-MOD"

+ Individual Voltage and Current (Omit on 2 Output only)

+ Tracking Voltage and Current

– Tracking Voltage and Current

Floating Voltage and Current (4 Output only)

INPUT: 105-132 VRMS, 47-420 Hz single phase.
REGULATION, LINE: 0.1% or 10 mv for rated line change.
REGULATION, LOAD: 0.1% or 10 mv for rated load change.
RIPPLE and NOISE: 1 mvRMS, 10 mv P-P to 10 MHz.
TEMPERATURE COEFFICIENT: 0.03% per deg. C.
RECOVERY TIME: 50 micro sec to within 50 mv for no-load to full-load change.
OVERLOAD PROTECTION: Automatic current limiting foldback.
OPERATING TEMPERATURE: –20°C to +50°C rated current to; 60°C derate 10%; to 71°C derate 25%.
STORAGE TEMPERATURE: –55°C to +85°C.
REMOTE SENSE: Sense terminals provided for correction of up to 0.5 volt load lead drop.
INPUT-OUTPUT CONFIGURATION: Barrier strip.
OPTIONAL: Over-voltage protection on any or all outputs.
VOLTAGE ADJUST: Screwdriver control.

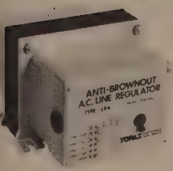
AC LINE REGULATORS 500 VA to 24 kVA*



ZERO DISTORTION
A.C. LINE REGULATOR
TYPE LRB
TOPAZ

SPECIFICATIONS

Operating Frequency
47 to 63 Hz, Sine Wave

Line Voltage Regulation:
±7% maximum for LRA Series
±3.3% maximum for LRB Series

Response Time:
1 cycle maximum

Output Distortion:
No spike; adds less than 1% THD

Load Regulation:
Less than 1% for load change of 10% to 100%

Efficiency:
98% minimum

Operating Temperature:
0 to 50° C

Temperature Coefficient:
0.05%/° C maximum

Audible Noise:
Typically 2 dB increase

Offering the. . .
- Highest Efficiency
- Smallest Size
- Lowest Distortion
- Lowest Cost

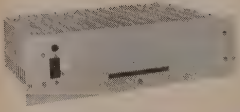
FREQUENCY CONVERTERS & DC-AC SINE WAVE INVERTERS

3855 Ruffin Road, San Diego, CA 92123–(714) 279-0831

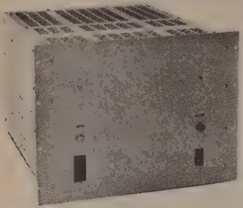
GZ & FZ SERIES

Input Protection:
High and low voltage
Reverse polarity
Static Regulation:
Line Regulation: ±1% maximum for line variations between low line and high line, at half load.
Load Regulation: ±2% maximum for load variations between no load and full load, at nominal line.
Regulation Envelope: ±5% maximum for any combination of line voltage, load current, and temperature within specifications.
Frequency Stability:
±0.5% of fixed frequency;
±0.01% optional
Output Protection:
Overload and short circuit
Total Harmonic Distortion:
Less than 5% at full load and nominal line
Operating Temperature:
-10° C to +55° C
Inverter Efficiency:
Typically 70% at full load



GP & FP SERIES

Input Protection:
Low voltage
Reverse polarity
Output Voltage Regulation:
Less than ±5% line and load
Frequency Stability:
±1% of fixed frequency;
Output Protection:
Overload and short circuit
Recovery Time:
Less than 100 milliseconds for 50% load change
Total Harmonic Distortion:
Less than 10% at worst case; 5% typical
Operating Temperature:
0° C to +55° C
Inverter Efficiency:
Typically 72% at full load



GX & FX SERIES

Input Protection:
High and low voltage and reverse polarity
Static Regulation:
Line Regulation: ±1% maximum for line variations between low line and high line, at half load.
Load Regulation: ±2% maximum for load variations between no load and full load, at nominal line.
Regulation Envelope: ±3% maximum for any combination of line voltage, load current, and temperature within specifications.
Frequency Stability:
±0.5% of fixed frequency;
±0.05% optional
Output Protection:
Overload and short circuit
Total Harmonic Distortion:
Less than 5% at full load and nominal line
Operating Temperature:
-10° C to +55° C
Inverter Efficiency:
Typically 75% at full load
Recovery Time:
50 milliseconds for 20% load change

ORDERING INFORMATION

Model numbers are constructed by combining information in the order in which it is presented above. For example, Model 1000 GZ-12/24-60-115/230 designates a 1000 VA, GZ Series Inverter which will operate from either 12 or 24 VDC (selectable) and provides an output of 60 Hz at 115 or 230 V. **Three-phase output units also available.**

FREQUENCY CONVERTERS

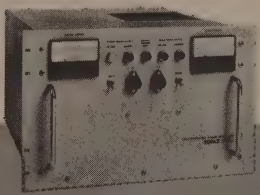
UNINTERRUPTIBLE POWER SYSTEMS

3855 Ruffin Road, San Diego, CA 92123—(714) 279-0831

10 kVA SYSTEM



1 kVA SYSTEM

SPECIFICATIONS

AC INPUT
105-130 V line to neutral or (210-260 V) normal range 95-105 V (or 190-210 V) extended range with reduced back-up time
60 Hz ± 5%

INPUT PROTECTION
Undervoltage and overvoltage protection on all inverters
Reverse polarity protection on all inverters
AC input failure indicated by relay contact closure

INVERTER OUTPUT
5% voltage regulation for line and load
0.5% frequency stability
Sinusoidal, with 5% total harmonic distortion at full load and nominal line
10% voltage overshoot/undershoot for 20% instantaneous load change

OUTPUT PROTECTION
Current limiting on all chargers
Overload and short-circuit protection on all inverters

AUTOMATIC LOAD TRANSFER
25 millisecond transfer (typical). Panel light indicates that load is powered by the ac line.
4 millisecond switch optional.

METERS
Battery voltage
System output voltage

OPERATING TEMPERATURE
0° C to +50° C

OPTIONS AVAILABLE
- AC Line Frequency and/or Phase Synchronization
- Static Transfer Switch with 4 milliseconds maximum transfer time, phase synchronized
- Float/Equalize Switch, mounted on front panel
- Low Battery Voltage Alarm and Indicator
- Special meters, switches, cabinetry and paint, etc.

Output Power (VA)	System Part Number	Input			Output				Battery	Full load Back-up Time	Recharge Time or Battery Charging Current	Size	Approx. Weight	List Price

	2570-2	230	3	60	230	1	60	43.5A						

Notes:
1. Sealed internal batteries are supplied as part of this model. External batteries may be connected in parallel with the internal batteries, thus extending the back-up and recharge times. Battery information is available on request.
2. External batteries are not supplied with the basic system. External batteries may be procured from Topaz with the basic system or purchased from another source.
3. Back-up times for internal batteries are specified for 25° C operation. Shorter times can be expected at lower temperatures and longer times at higher temperatures.

ALSO AVAILABLE: Low Cost 300 VA Models (Full details on the 300 VA UPS are specified in separate data sheets.)

300	315-BK-12-60*	120	1	60	120*	1	60*	2.6A	External 12 V (Note 2)	Dependent on battery	3 Amperes	7" H. 7" W. 5.5" D.	13 lbs. Plus battery	$ 250

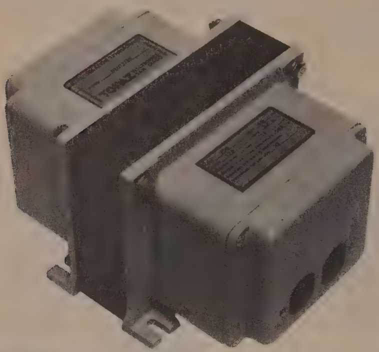
ULTRA-ISOLATION TRANSFORMERS

For eliminating power line noise problems associated with sensitive equipment



TOPAZ ULTRA - ISOLATION TRANSFORMERS are available in single-phase and three-phase versions, from 125 VA to 45,000 VA, and in step-up and step-down configurations, some with provisions for use on several different power line voltages. They are especially designed for these applications:

1. For isolating sensitive instrumentation from noisy power lines.
2. For isolating sensitive power lines from noisy equipment.
3. For isolating noisy equipment from noise-sensitive equipment when both share the same AC power source.
4. For maximum attenuation of common-mode noise (noise between ground and power lines).
5. For excellent attenuation of transverse-mode noise (line-to-line output noise) caused by common-mode noise at the input.
6. For completion of electrostatic guarding of equipment which is protected by an electrostatic shield.
7. For applications in which leakage currents must be kept below critical low levels.

Featuring. . .

- **Excellent Common-Mode Noise Rejection**
- **Very Low Leakage Current**
- **Unique Box-Shielded Design**
- **Single-Phase and Three-Phase Models**
- **50Hz, 60Hz and 400Hz Models**
- **Money-Back Guarantee**

TYPICAL SPECIFICATIONS

Common-Mode Noise Rejection:
.005 pF—greater than 125 dB
.001 pF—greater than 140 dB
.0005 pF—greater than 146 dB

Common-Mode to Transverse-Mode Noise Rejection:
Greater than 125 dB at 1 kHz

Electromagnetic Noise:
Less than 0.1 gauss (-20 dB) at 18 in. radius

Standard Voltage Ratings:
120 (for 110, 115, 120 V lines*)
240 (for 208, 220, 230, 240 V lines*)
480 (for 360 440, 480 V lines*)
*Maximum current = VA rating ÷ Nominal Voltage Rating

Operating Voltages:
To 110% of nominal

Operating Frequency:
57 to 63 Hz

STANDARD 60 Hz SINGLE-PHASE STOCK MODELS

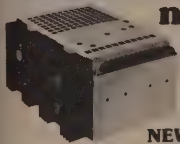
Send for your FREE SYSTRON-DONNER Power Supply Catalog . . . featuring application notes, power supply terms, photos, easy-to-use selection chart, complete specs, and outline drawings on our complete line of:

laboratory, systems, and digital power supplies, and specialty products.

new products



NEW

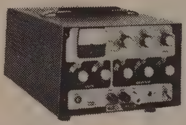
Triple Output DC Input Switching Regulators
DC3-E Series
24 or 48VDC Input
5 & ±15VDC Outputs
Priced from $470

NEW

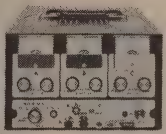
Full Rack Power Pack
VP Series
Nominal Voltages
Ranges 5, 8, 12, 15, 24, 28, 48VDC
Priced from $645

specialty products

Digitally Adjustable Precision Lab Supply
PLS50-1 $375
0 to 50VDC
@ 1 Amp



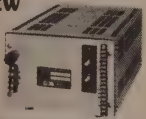
- 5 dial calibrated output
- Multiversatile remote programming in ohms/volt, volt/volt, analog voltage, current limiting.



Triple Output Lab Supply
TL8-3 $315
0 to 8VDC
@ 3 Amps
0 to ±32VDC
@ 1 Amp

- Each output independently adjustable
- Automatic Current Limiting
- Ideal for sensitive and critical IC Circuit testing

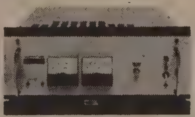
NEW



Switching Regulator Modules SHA Series
High Efficiency, High Power, Half Racks

- Up to 52VDC & 120 amps
- Brownout protection
- Fan option-high temperature operation
- DC inputs available • $650

NEW



High Current Full Racks
VPL Series

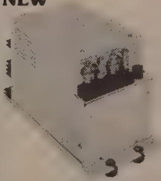
- Up to 300 amp outputs
- Nominal, 5, 12, 24VDC
- $1195

NEW

High Speed Digital Power Source for Automated Test Systems
Model DPS single output from $1695
dual output from $2260
Single or Dual 0 to 50VDC or 0 to 100VDC to 1 Amp

- Addressable Memory (16 possible addresses)
- Optional visual display
- Optional programmed polarity, overcurrent limit, overvoltage protection level

NEW



DC to DC
DC to AC
Converters

- High efficiency
- Low noise
- Single & Multiple output
- Precision performance
- Priced from $250

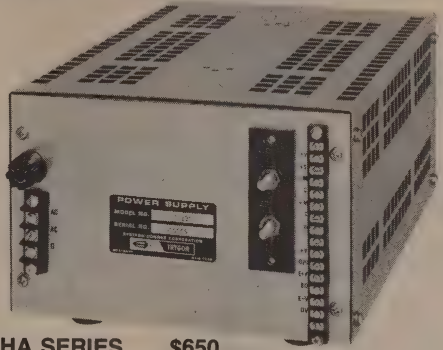
*All Half-Rack and Quarter-Rack supplies mount in 5¼'' panel height. Rack adapters are available.
**Digital dial settable, accuracy 0.1%.
†Constant voltage, adjustable constant current with automatic crossover.
△Adjustable current limiting.

SYSTRON-DONNER

SWITCHING REGULATOR MODULES

New! from the new leader in 20kHz Switchers

- High efficiency up to 82%
- High power up to 52VDC & 120 AMPS
- Soft start — low in-rush turn-on current
- Fan option for full rated high temperature operation
- Low conducted & radiated interference
- DC inputs available
- Brownout protection
- UPS applications



SHA SERIES $650
4⅞″ x 8″ x 13¾″

SPECIFICATION HIGHLIGHTS

Input:
102-130/198-256VAC
47-440Hz, single phase

Load Effect: (Load Regulation)
0.1% for 0 to 100% of rated load

Source Effect: (Line Regulation)
0.1% for change over entire input voltage range

PARD (Ripple & Noise):
20mV RMS, 50mV Peak to Peak (20Hz to 10MHz)

Temperature Coefficient:
0.02%/°C max.

Drift:
Less than 0.1% over 8 hours

Load Effect Transient Recovery:
Less than 300usec for a 10% load step above 10% minimum load to return within regulation band

Transient Overshoot on Turn On or Turn Off:
None

Carryover Time:
30 milliseconds minimum at nominal line, full load

Operating Temperature:
−20 to +71°C
Derate 1%/°C above 40°C

Reverse Voltage Protection:
Yes

Thermal Protection with Automatic Reset:
Yes

AC Input Protection:
Fuse

Remote Sensing:
Yes

Standard Margin Voltage Programming:
±5%

Automatic Current Limiting:
Adjustable with automatic recovery

TTL Logic Inhibit Turn On/Turn Off:
Yes

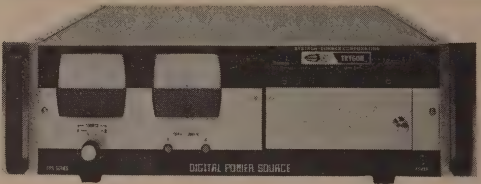
SINGLE/DUAL CHANNEL DIGITAL POWER SOURCE

SYSTRON-DONNER Dual Power Supplies Digitally Controlled for OEM and Automated Test Systems

OUTSTANDING FEATURES

- Provides two independent 0 to 50V at 1 amp or 0 to 100V at 0.5 amp floating output precision power sources from digital computer input
- Programs each output independently
- Optional programmed polarity, overcurrent limit, overvoltage protection level
- Front panel meters
- Overcurrent mode indicator lights
- Addressable memory responds to only 1 preselected of 16 possible address codes. Reduces the number of total I/O circuits required.
- Fully optically isolated to eliminate ground loops and allows power supply outputs to be floated with respect to the digital inputs and one another.
- Digital input is 1 line/bit, 4 bits/digit BCD from a computer or digital tape programmer.
- Self-verification options available are data parity check flag, time delay ready flag, overcurrent alarm flag, power supply equilibration ready flag.
- Visual display of numerical input data command (optional)
- Manual programming (optional)
- One or two power sources in one 5¼" EIA cabinet



SPECIFICATION HIGHLIGHTS

Load Regulation:	+(0.001%+100uV) for 0 to full load
Line Regulation:	±(0.001%+100uV) for 10V RMS line change
Stability:	(8 hours) DPS-50 1mV DPS-100 2mV (1000 hours) DPS-50 50mV DPS-100 100mV
Temperature Coefficient:	±(0.005%+2mV)/°C, +10°C to 50°C
Recovery Time:	50usec. to within 25mV of final value for 75% rated load change
Programming Speed:	2 milliseconds max. for full scale, full load change
Linearity:	(0.005% full scale ±2mV)
Output Impedance: DC to 1kHz	0.002 ohm max.
Isolation:	300 volts DC

How to Order:

Select the basic DPS unit, either single or dual channel and list the option(s) desired using the Option number shown

		Single Channel			
Model DPS-50 or DPS-100	$1695	Option—09 Overvoltage Programming	65	Option—19 Cable Continuity	20
Option—01 Digital Display, 3 digits	245	Option—11 Overcurrent Programming	55	Option—21 4 Digit BCD	250
Option—03 Range Control	15	Option—13 Overcurrent Flag	10	Option—23 Digital Display 4 digits	260
Option—05 Equilibration Flag	10	Option—15 Parity Check Flag	40	Option—25 12 Bit Binary	50
Option—07 Manual Control	75	Option—17 Time Delay Ready Flag	20	Option—27 Polarity Reversal (Sign)	200
		Dual Channel			
Model DPSD-50 or DPSD-100	$2260	Option—10 Overvoltage Programming	150	Option—20 Cable Continuity	40
Option—02 Dual Digital Display, 3 digits/channel	340	Option—12 Overcurrent Programming	105	Option—22 4 Digit BCD	495
Option—04 Range Controls	20	Option—14 Overcurrent Flags	15	Option—24 Digital Display 4 digits/channel	365
Option—06 Equilibriation Flags	15	Option—16 Parity Check Flags	40	Option—26 12 Bit Binary	75
Option—08 Manual Controls	75	Option—18 Time Delay Ready Flags	40	Option—28 Polarity Reversal (Sign)	250

All prices are F.O.B. Westbury, N.Y
For more information on Trygon/Systron-Donner Digital Programmers, contact your local Scientific Devices Sales Office or Trygon

5 Year Warranty on every Standard Power Supply

ORDERING INFORMATION BY MODEL

When ordering a power supply, ask for the Model number as listed in the charts and include the suffix that denotes the option desired, i.e., RS60-12B OV, that's a 60VDC, 12 amp, 3½", rack mounted unit with overvoltage protection built-in at the factory.

PRICES

Prices given for all standard models and options are FOB Factory, Westbury, New York. Any Federal, State or Local Taxes are extra. Terms are Net 30 days to rated accounts. Prices and specifications are current as of publication date. They are subject to change without notice as technical advances warrant.

DISCOUNTS

Generous quantity discounts are available on all power supplies. Contact the factory for a quotation on your specific requirements.

INSTRUCTION BOOKS

All power supplies are shipped with one copy of an instruction book. Extra instruction books may be ordered as required at $10.00 each for current models.

FORMS PREPARATION

Preparation of DD250 Forms, add $10.00 per Form Set.

SOURCE INSPECTION

For Government or Customer Source inspection, add 2%; $25.00 minimum per shipment.

FACTORY COMMUNICATIONS

Sales, Applications Engineering and Administration may be reached via any of the following.

Recommend The Right EVEREADY® Battery FOR THE RIGHT JOB!

"EVEREADY" BATTERY SYSTEMS AND THEIR PROMINENT FEATURES

...From the manufacturer of the most complete dry battery line in the world.

	FEATURES	APPLICATIONS
CARBON ZINC 915 950 935 216 732	Low cost, voltage drops gradually with use, variety of shapes and sizes ranging from 1.5 to 510 volts.	Radios, barricade flashers, telephone amplifiers, marine depth finders, toys, lighting systems, signaling circuits, novelties, flashlights, lanterns and fluorescent lights, cameras and flash guns, paging devices, laboratory instruments, alarm systems, remote controlled models.
HEAVY DUTY) (Zinc Chloride) 1215 1250 1235 1222 1209	Premium quality, extra life in heavy duty use, good shelf life, service life and resistance to leakage, good low temperature characteristics.	Flashlights and lanterns, transistor radios, cassette tape recorders and players, communications equipment, camera film drive, toys, pocket electronic calculators, other motor driven devices.
ALKALINE MANGANESE Primary-Secondary 	Good low temperature performance, voltage falls gradually with use, good shelf life, low impedance, 50 to 100 percent more energy than carbon-zinc batteries, high efficiency under continuous or heavy-duty high-drain conditions.	Radios, heated clothing, bicycle lights and horns, shavers, electronic photoflash, lighting systems, movie cameras, radio-controlled models, model-plane ignition, toys, television sets, cassette tape recorders and players. Pocket electronic calculators, oceanographic instruments and buoys. Portable communication systems.
MERCURIC OXIDE 	Excellent high-temperature performance, constant voltage under discharge, long shelf life, high energy density per unit volume.	Secondary voltage standard, radios walkie-talkies, paging devices, radiation detection, test equipment, hearing aids, transistorized instruments, electronic watches, clocks.
SILVER OXIDE 	Constant voltage under discharge, good low-temperature performance, excellent shelf life.	Hearing aids, electric / electronic / digital watches, reference voltage source, photoelectric exposure devices, instruments, wireless microphones, electronic thermometers.
MAGNESIUM 	Reliable, lightweight, high performance, excellent high temperature storage capabilities.	Military electronic communications and portable radar equipment.

Recommend The Right EVEREADY® Battery FOR THE RIGHT JOB!

NICKEL-CADMIUM *Rechargeable* BATTERIES

- High rate energy source
- Rechargeable
- Stacks of button cells made to order
- High cycle life
- Fast Charge Types
- Rugged and dependable batteries
- Cylindrical cell batteries custom designed to your specifications

FEATURES Hermetically sealed high cycle life maintenance free, relatively constant discharge voltage, good high and low-temperature performance, competitive to other battery systems in terms of cost per hour of use, high resistance to shock and vibration, button and cylindrical configurations, long life, low self-discharge rate, high effective capacitance. Fast charge capabilities.

BATTERY PACKS: 6.25 Volts to 15 Volts

"Eveready" Battery No.	Voltage	Capacity	Dimensions			Weight

"Eveready" Fast Charge cells have the ability to accept high rate charge currents and become fully charged in three hours or less. These new cells can also withstand occasional overcharging, at the three hour rate, for up to three days without adversely affecting cell performance. To achieve this, regular nickel-cadmium battery chargers can be used. These cells may also be charged at the one hour rate with simple thermal controls. The use of the thermal control or cutout in our fast charge concept also permits various modes of charging operation.

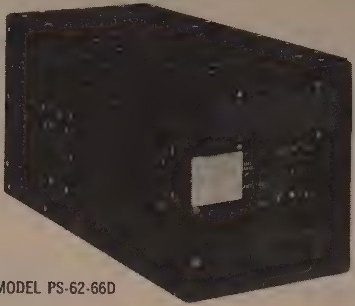
FREQUENCY CONVERTERS

400 Hz to 60 Hz

SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Airborne and Ground Support Equipment



MODEL PS-62-66D

FEATURES

■ High efficiency ■ RFI protection ■ Short circuit and overload protection ■ Long, maintenance-free operation ■ Self-contained cooling ■ Light weight ■ Low distortion

APPLICATIONS

These converters provide a dependable source of 60 Hz sine wave power for airborne and air-transportable test equipment. They are also used with 60 Hz ground equipment wherever primary power available is 400 Hz. Applications include use with oscilloscopes, metering equipment, recorders, cryptographic machines, and teletypes.

MODEL	POWER	INPUT (VAC*)	OUTPUT (VAC†)	SIZE (Dim. in Inches)	WT. (Lbs.)
PS-65-225-7	400 VA	115/200	115 ± 5%	7.8 x 5.2 x 21.3	27
PS-64-162	750 VA	115/200	115 ± 5%	7.5 x 12.0 x 20.5	63
PS-69-359	2000 VA	115/200	115 ± 2.5%	10.0 x 9.0 x 21.6	80
PS-62-66D	3500 VA	115/200	115 ± 2.5%	10.0 x 9.0 x 21.6	95
PS-61-33D	8000 VA	115/200	115 ± 2.5%	12.2 x 20.0 x 23.5	230

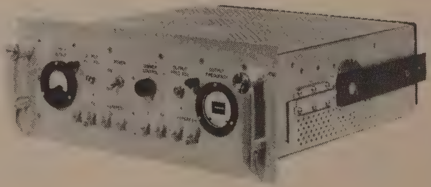
*All units available with other input voltages, and frequencies of 360-1000 Hz.
†All standard units available with frequency regulation of ±1.0%. Tighter regulation available on special request.

FREQUENCY CONVERTERS

60 Hz to 400 Hz

SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Shipboard and Ground Support Equipment



MODEL PS-65-243-1

FEATURES

■ High efficiency ■ Small size ■ Light weight ■ Low distortion ■ Virtually no audible noise ■ Long, maintenance-free operation ■ Short circuit and overload protection ■ RFI protection

APPLICATIONS

Extremely stable and quiet-operating, these converters are excellent for flight simulators, and wherever 400 Hz power is required to operate airborne-type equipment. Other applications include ground support systems, design and test labs, and shipboard installations.

MODEL	POWER	INPUT (VAC)	OUTPUT (VAC†)	SIZE (Dim. in Inches)	WT. (Lbs.)

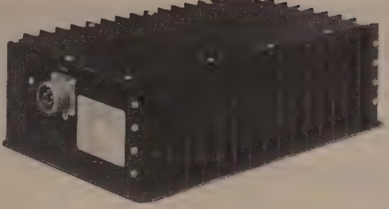
STATIC INVERTERS

28 VDC to 400 Hz

SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Airborne and Ground Support Equipment



MODEL 4SI-500-1P

FEATURES

■ Overload and short-circuit protected ■ High efficiency ■ Light weight ■ Voltage-regulated ■ Low distortion ■ Stable output frequency ■ Long, maintenance-free operation ■ Virtually no audible noise ■ RFI protection

APPLICATIONS

These inverters are ideal for providing AC power from DC sources to one or more items of airborne equipment, and also are excellent sources of power for 400 Hz ground support equipment. Typical applications include use with weather radar, Doppler navigation systems, artificial horizons, omni's, autopilots, ADF, DME, transceivers, transponders, and engine analyzers.

MODEL	POWER	INPUT (VDC)	OUTPUT (VAC†)	SIZE (Dim. in Inches)	WT. (Lbs.)

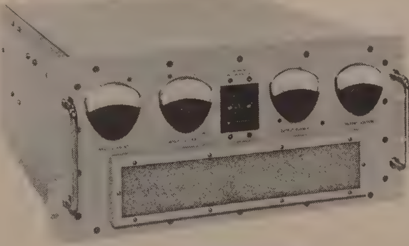
STATIC INVERTERS

28 VDC to 60 Hz

SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Airborne and Ground Support



MODEL PS-67-324-1

FEATURES

■ High efficiency ■ Light weight ■ Small size ■ Low distortion ■ Virtually no audible noise ■ Long, maintenance-free operation ■ Short circuit and overload protection ■ RFI protection.

APPLICATIONS

For aircraft instrumentation systems with 28 VDC electrical systems, and for flying laboratories, these instruments provide an excellent source of 60 Hz power. Applications for these inverters include power for oscilloscopes, meters, cryptographic machines, teletypes, and recorders.

MODEL	POWER	INPUT (VDC)	OUTPUT (VAC†)	SIZE (Dim. in Inches)	WT. (Lbs.)

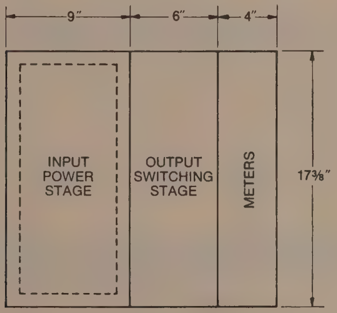
(1) At worst case condition. 21 VDC input, 150% load.

(2) All weights vary slightly depending on options.

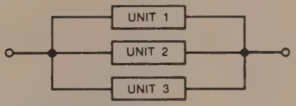
BUILT-IN SPECIAL FEATURES ALLOW VERSATILITY OF OPERATION

INCREASED POWER OUTPUT

By virtue of modular design of series AI and AC units, previously purchased inverters and converters can be factory modified for increased output power capability up to 1000 VA. This modification can be accomplished economically thereby maximizing the use of already procured units when power demands grow.



Units may also be connected in parallel for increased power output; e.g., three 1 KVA units for a 3 KVA, 1 ϕ output. See Option 18.



3-PHASE OPERATION

Single phase units may be arranged in a wye configuration for a 3-phase output. Necessary power distribution unit and keyed interconnection cables furnished on request. See Option 15.

AI AND AC SERIES OPTIONS*

OPTION NO.	DESCRIPTION
1.	Temperature Range: −54°C to +65°C IAW MIL-E-5400N, MIL-E-16400F, and MIL-E-4158E
2.	EMI IAW MIL-STD-461A (radiated and conducted)
3.	Shock: 15g for 11 milliseconds IAW MIL-STD-810B, Method 516.1, Procedure I, Figure 516. 1-2 (a) and (c)
4.	Vibration (Ground Equipment and Common Carrier) IAW MIL-STD-810B, Curve AX and AY, Procedure X.
5.	Vibration (Aircraft Equipment) IAW MIL-E-5400N, Curve II and III; and MIL-STD-810B, Curve C, Procedure I
6.	Vibration (Transport Equipment) IAW MIL-STD-167, Type I; and MIL-E-16400F
7.	Output Voltage Adjustable for 95-135 VRMS via front panel control (not available with paralleled, phase locked or externally synchronized units)
8.	Output Current Limit Adjustable from 10-150% of rated current via front panel control (not available with paralleled, phase locked, or externally synchronized units)
9.	Output Frequency Adjustable 15% of nominal (not available with paralleled, phase locked, or externally synchronized units)
10.	Multiple Fixed frequency operation, switch selected (not available with paralleled, phase locked, or externally synchronized units)
11.	230 VRMS, single phase input
12.	230 VRMS, three phase input
13.	230 VRMS, single phase output
14.	230/400 VRMS, three phase output
15.	115/200 VRMS, three phase output (phase-locked) system
16.	External synchronization from pulse, sine, or complex wave form (contact factory for specific signal)
17.	Precision frequency tolerance of .003%
18.	Parallel operation up to four units
19.	Output waveform — 1% THD
20.	Elapsed time indicator (internal)
21.	Slide Mounting
22.	Size; decreased depth on special request
	METERS (Limit four meters per panel)
23.	Frequency meter, dial and pointer
24.	Frequency meter, Reed type
25.	Running time meter
26.	Input ammeter, pointer type
27.	Output ammeter, pointer type
28.	Input voltmeter, pointer type, expanded scale
29.	Output voltmeter, pointer type, expanded scale
30.	Deluxe metering package: Four place digital LED readout for switch selectable input/output functions

*Consult factory for compatibility with other options and possible effect on other standard parameters.

UNITRON

SPECIALISTS IN SOLID STATE POWER CONVERSION

1624 NORTH FIRST STREET • P.O. BOX 1331 • GARLAND, TEXAS 75040 • (AC 214) 276-8591 • TELEX 73-0644

UNITRON
INCORPORATED

Specialist in Solid State Power Converters, Uninterruptible Power Systems and Adjustable Speed Motor Drives

SELECTING THE RIGHT POWER SOURCE

Frequency converter, 2500 VA continuous, 12 KVA intermittent. 60 pounds.

MINIMIZING SIZE, WEIGHT, AND COST

Unitron has for thirteen years specialized in the design and manufacture of power converters, uninterruptible power systems, and variable speed motor drives to meet exacting specifications for both industrial and defense/aerospace requirements of airborne, ground support, and facility environments. By providing units for use in such a variety of applications, it has become evident that over-specifying waveform and regulation characteristics is primarily responsible for undue penalties of size, weight, and cost of power conditioners. Unitron's experienced application engineers are anxious to assist the system designer in arriving at a specification which assures proper operation of end item equipment while avoiding needless penalties.

SINEWAVE SOURCES

A complete product line of inverters and frequency converters which provide precision sinewave power is available from Unitron. Some of these units are described on the following pages, each having proven themselves through many years of reliable performance under a multitude of operating conditions. Primarily sinewave power is necessary where distortion-sensitive loads such as computers, communication equipment, data collection and dissemination equipment, and video display equipment are being considered.

NON-SINUSOIDAL SOURCES

Most loads are specified in terms of sinusoidal, highly regulated power input which is not necessarily required for optimum operation. Unitron has available power conversion units which through the use of integrated circuits for complex waveform generation, provide a preconditioned, non-sinusoidal output that is particularly suitable for high-current-inrush-demanding loads such as various combinations of motors, fans, and/or heaters. Such loads generally do not require a sinewave source; thus maximum advantage of size, weight, efficiency, and cost can be taken by selecting the proper unit from Unitron's non-sinusoidal power sources. These units can be made available with either variable or fixed frequency and/or voltage outputs. They are capable of delivering high inrush currents when needed by systems containing air conditioning, galley equipment, teletypes, recorders, just to list a few examples.

OTHER CONSIDERATIONS

The proper selection of a solid state power conversion unit can also offer other advantages to an overall system capability and performance. Such advantages are:

Power Source Independence ▪ Environmental Control ▪ Reduction of Input Power Transients ▪ Extended Component Life ▪ Reduced Audio Noise Level ▪ Power Factor Correction ▪ Uninterruptible Power • EMI Isolation.

For more information and specifications on these new products, please contact our Marketing Department. Whatever your power conversion need, you are invited to discuss your application with Unitron engineers, who will be glad to work with you in achieving the best possible solution.

ADJUSTABLE HIGH VOLTAGE DC POWER SUPPLIES

- **VOLTAGE RANGES TO 300,000 VOLTS DC**
- **CONSERVATIVELY RATED — HIGH RELIABILITY**
- **REVERSIBLE POLARITY**
- **FULLY SELF-PROTECTING**
- **OPTIONAL "APPLICATIONS ORIENTED" CONTROLS**

ADJUSTABLE OUTPUT POWER SUPPLIES

Series "BA" adjustable power supplies and series "BP" power packs are available at voltage ratings from 1 KVDC through 2000 KVDC at output power ratings from 1 watt to 250 kilowatts continuous. The adjustable series includes applications oriented control features and package design as shown in photos A and B. The power pack series (photos C and D) has many applications in OEM systems and for general laboratory use.

Every UVC power supply includes conservatively rated high voltage components designed and manufactured under the strict control of the specialized UVC technical staff to insure continuous duty, long term, trouble free operation. A one year factory backed and field supported warranty policy accompanies each shipment.

LOOK AT THESE FEATURES

1. Ripple. Each power supply offers a standard ripple specification of 5% maximum or better. Optional filters and attenuators are available for every UVC supply to reduce ripple to as low as .01% rms.

2. Polarity. Each power supply offers the flexibility of reversible output polarity performance.

3. Protection. Overvoltage and overcurrent protection features are available as both adjustable range and fixed value circuits. All access areas and doors are interlocked for personnel protection and all energy storage components and circuits are discharge protected for personnel protection.

4. Package. Rack mounted, floor and bench operable as well as portable design are among the packages available for UVC standard high voltage power supplies.

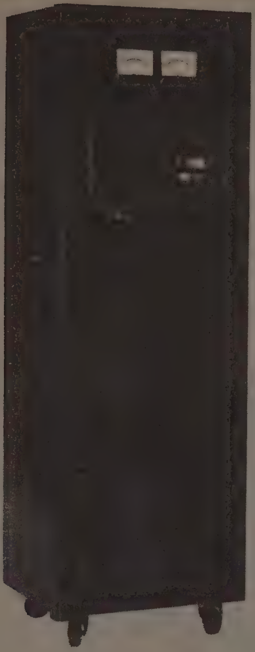
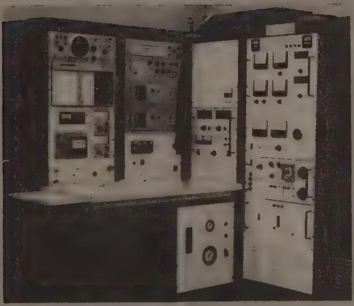
PRECISION REGULATED HIGH VOLTAGE DC POWER SUPPLIES



PRECISELY REGULATED EQUIPMENT

Precisely regulated performance over wide adjustment range, low ripple, fast response and high stability enable the series "BRE" power supplies to be used in exacting work for X-Ray Spectroscopy, electron microscopes, TWT's, ion bombardment experiments, particle separators.

These precisely regulated power supplies are available in voltage ratings from 1 KV through 500 KVDC at continuous duty output power up to 100 KW. Our regulation circuitry techniques realize performance specifications which are virtually independent of input line variations or no load-full load changes. Ripple in most cases is 0.01% rms and the output polarity is available as both fixed and reversible. Two voltage adjustment schemes are offered, namely digital dialable control for the most exacting applications and continuous coarse and vernier controls. In the digital dialable scheme, we allow for adjustment in increments of 10 KV, 1 KV, 100 volts, 10 volts, 1 volt and 0-1 volt vernier. This system provides the assurance that the actual output is always within 1% of the dial readings. As indicated you may select a coarse, and vernier voltage adjustment scheme and realize economic savings without sacrificing basic regulated performance. Regulation accuracy of ± 0.25%; ±0.1%; ±0.05% and ±0.01% for line or load changes is available on most series "BRE" power supplies.



TWT/CFA POWER SUPPLY SYSTEMS

Chances are your TWT tubes were production tested by a UVC Power Supply.

As a matter of record, UVC has been supplying power supplies to leading TWT manufacturers for low, medium and high power TWT's that not only satisfy the demanding requirements of TWT production, quality control and life testing, but in-the-field performance and reliability as well.

You can forget about power problems when you marry your TWT's to UVC Black Boxes.

They are available with Cathode, Heater, Collector, Anode and Helix outputs. Each UVC Black Box system features: PULSED OR CW OPERATION, TURN ON/OFF SEQUENCE CONTROL TO INSURE SAFE AND PROPER PERFORMANCE, FAST-ACTING CROWBAR PROTECTION.

HIGH VOLTAGE TERMINATIONS AND DIVIDERS

TERMINATIONS

UVC high voltage terminations and connection links have been designed and fabricated specifically for use in high voltage applications requiring careful attention to terminal and connection problems. The standard terminations have been manufactured in a variety of geometrical configurations which have been chosen for their well-defined corona and leakage onset characteristics. Accurate machining and polishing, along with adequate theoretical and field experience on these terminals have given UVC the ability to advise on a particular size, shape or spacing for a particular application or site condition.

Corona-free terminations are vital in high voltage work, as corona stress reduction eliminates generated radio interference and the deterioration of insulation. Carefully designed high voltage terminations represent the most fundamental and successful method of eliminating insulation break down and corona discharge problems. This is especially true with organic insulating materials such as varnishes, bonds, cellulose, natural rubber, neoprene, etc.

Basic electrostatic theory shows that sharp points, edges, corners, etc. represent discontinuities in the mapping of equipotential surfaces. It is precisely these discontinuities that create unpredictable high voltage performance. Capping these points with a simple conducting termination eliminates the high stress points (discontinuities) in favor of a more linear distribution of voltage gradients.

DIVIDERS

UVC offers five types of voltage dividers for measurement of various types and shapes of high voltages. Selection of a voltage divider type depends upon the shape of measured voltage and the kind of information required.

These dividers may also be used for measurement and/or sensing of special high voltage transients. They are optimized in such a way as to drain a minimum of power from the voltage source and can be placed within close proximity to grounded objects without significant interferences on the divider ratio.

The low voltage components are enclosed in the bottom cylinder, which is made of steel for the purpose of shielding. The BNC connector for connections of instruments and the attenuating switch are mounted directly on the steel cylinder. High voltage components are enclosed in phenolic type cylinders. Specially designed high voltage terminals facilitate high voltage connections.

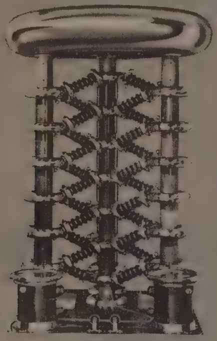
HIGH VOLTAGE UTILITY, CABLE, SWITCH GEAR PRODUCTS TESTING

AC INSULATION TESTERS

Designed for applications requiring AC testing of materials, these testers find wide use in the cable, transformers, bushings, potheads, etc., industry.

These AC testers offer a wide range of voltage and KVA capability to cover the case of "small" sample tests where lower voltage and where light KVA are required and up to "large" run high voltage testing requiring high voltages and high KVA's.

All testers are available with a variety of optional features including such things as memory meter, automatic programming of voltage, special mechanical arrangements and many other features specifically oriented toward the AC tester field.



CORONA MEASUREMENT SYSTEMS

The UVC standard corona measurement system consists of AC test source, input line filter calibrating capacitor, power separation filter and corona detector. A 5" diameter oscilloscope provides a clear display and a selector switch allows one to select an elliptical display. Systems sensitivity is less than 1%.
AC/DC systems are available for special applications.

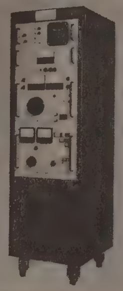
IG 870	LOW, MEDIUM, HIGH IMPULSE GENERATORS
CMS-870	CORONA MEASUREMENT SYSTEMS
GA 870	AC INSULATION TESTERS
BA 70-11	EXTRA HIGH VOLTAGE DC POWER SUPPLIES

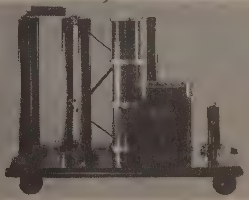


EXTRA HIGH VOLTAGE DC POWER SUPPLY

The specialized extra high voltage products offered by UVC fill the need for standard product availability and performance ratings above 300KV.

Standard models have been adapted for use with neutron source generators, ion implantation systems, electron microscopes and ion source injectors. Extensive use of special shaped terminal hardware; graded and compensated cable wells; and conservative insulation techniques yield long term trouble-free performance even under severe sparking load conditions. UVC offers the choice of air insulation, SF 6 gas insulation and oil insulation.

Equipment availability includes basic power pack construction (voltage multiplying assembly) or completely instrumented system inclusive of precision metering; complete control function flexibility; primary circuit and high voltage protection as well as output performance adjustment controls.



IMPULSE GENERATORS

Low, medium and high energy impulse generators are available for diverse laboratory tests and investigations. Both standard wave (1.5/40 and 1.2/50 μ seconds) and switching surge (200/2000 μ seconds) are available. Special application features include injection or self-triggering discharge, resistive and capacitive dividers, remote polarity reversal and memory meter.

BIOMETRICS INSTRUMENT CORPORATION (a subsidiary of Varo, Inc.)

SPECIALIZED CUSTOM DESIGNED EQUIPMENT

The Biometrics Instrument Corporation, a subsidiary of Varo, Inc., has an unusual variety of expertise in the design of highly specialized power conversion equipment. Since 1946, Varo has continually advanced the development of more reliable, smaller, lighter, and more versatile power conversion equipment to meet exacting specifications for widely varied applications and environments. The systems shown on these pages represent only a sampling of Varo's many faceted capabilities. Additional assistance can be secured by contacting one of the regional sales offices listed below.

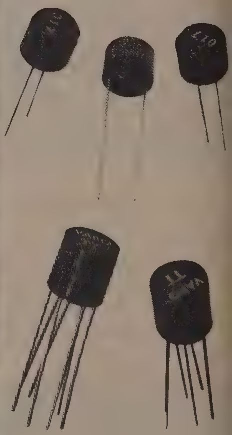
MAGNETIC COMPONENTS



As a result of 25 years of experience in the development of magnetics, Varo is capable of designing and manufacturing the full spectrum of magnetic components to your state-of-the-art parameters.

Facilities include a complete in-house laboratory to insure the ability to deliver products meeting the requirements of MIL-T-27C.

Custom designs developed by Varo include power transformers and filter inductors (specializing in high power 400 Hz); L-C filters — bandpass, low pass, high pass and notch types; pulse transformers, RF coils and transformers, and many more. Our engineers work closely with customers to assure meeting customers' needs, including MIL-specs, temperature requirements, size, efficiency, tight tolerances, and phase shift requirements. In addition, Varo has developed and patented the Varoformer®, a highly efficient, constant voltage transformer.

Varo also offers a broad line of standard audio transformers and miniature toroidal inductors for PC board mounting.

Whatever your need for magnetic devices, you are invited to discuss your requirements with our engineers.

BIOMETRICS INSTRUMENT CORPORATION (a subsidiary of Varo, Inc.)

SHIPBOARD POWER CONVERSION EQUIPMENT

5 KW UNINTERRUPTIBLE POWER SYSTEM

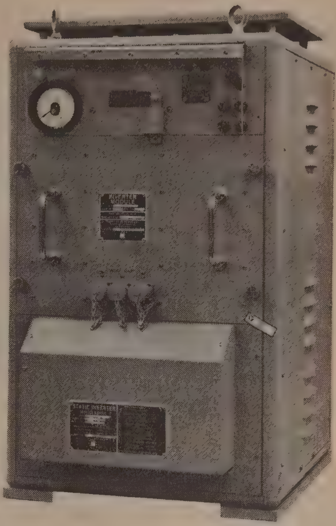
Our Model 4580 UPS has been used for many years in shipboard installations where critical load applications require a no-break power capability.

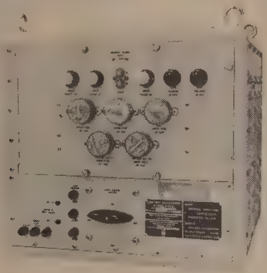
The system supplies 5 KVA, 115 VAC, ±400 Hz, 3φ output power from 115 VAC, 60 Hz or 400 Hz, 3φ primary input power sources. It will operate for a limited time from external storage batteries in the event of primary power failure.

The 4580 UPS System consists of two basic units, the Model 4345D Static Inverter and the Model 3172B Control Converter. The 3172B Converter is used as a regulated DC power source for the 4345D Static Inverter and as a battery charger for the external storage batteries. The 4345D Static Inverter converts the nominal 250 VDC output of the 3172B Converter into the three phase, 400 Hz output.

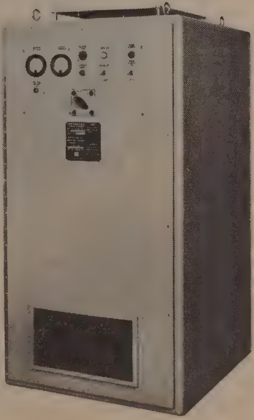
The 4345D Static Inverter has been used successfully for many years as a power source in applications where an input of from 210 to 355 VDC is the primary power. The output distortion is 4% maximum with a 0.6 lagging to unity power factor.

Both the 3172B Converter and the 4345D Static Inverter are designed to meet the shock and vibration requirements of MIL-S-901 and MIL-STD-167. The operating temperature range is 0°C to 50°C.





1 KVA UNINTERRUPTIBLE POWER SUPPLY



Designed to meet customer specifications to service a shipboard teletype system, this Model 4404 UPS is completely self-contained, including Ni-Cad batteries, static switch, and inverter. Batteries may be external if desired. A manual bypass allows for system servicing.

In the event of either inverter failure or a load fault, the static switch automatically transfers the AC line output in less than ½ cycle. This application requires a maximum harmonic distortion of 3%; the worst-case voltage transient in the inverter, no-load to full-load step change, does not exceed −28% in the first half-cycle, and less than 5% for the remainder of the 20 msec response time. However, a maximum harmonic distortion specification of 5% would allow reduction of this voltage transient to less than −14%.

Inverter input is 105-150 VDC; output 115 VAC ±1%, 60 Hz ±0.5%; 1 KVA; power factor, .7 lagging to unity.

5 KVA FREQUENCY CONVERTER

Typical of our accomplishments in lightweight, small-sized frequency converters is this 5 KVA unit designed for shipboard application, Model 4403. Only 17″ x 18″ x 22″, its weight is 250 pounds maximum. Input is 60 Hz ±5%, 3-phase, 400 V ±10%. Output is single phase, 5 KVA, 400 Hz ±0.5%, 115 V ±1%. Power factor, 0.8 lagging to 0.8 leading. Efficiency of the unit is 70% minimum, with a maximum harmonic distortion of 2%. The unit is designed to withstand shock per MIL-S-901C, vibration per MIL-STD-1678, Type 1, and humidity up to 95%. Operating temperature is 0°C to 50°C. Internal fan cooling is provided.

AIRBORNE INVERTERS

CONVERTER/INVERTERS FOR AIRBORNE APPLICATIONS

Typical of units designed for rugged airborne operating conditions is this Model 4380 converter/inverter designed to supply power for missile system electronics. All solid-state; calculated MTBF, worst-case, is 1500 hours. Modular construction reduces MTTR, which has been demonstrated at less than 0.8 hours. The unit weighs only 16 pounds and operates from a 24-32 VDC input, with a DC output of 150V, and an AC output of 115 VAC RMS, 1ϕ, 400 Hz, 275 VA. Protection includes over-and-under voltage for prolonged periods, and overload and reverse polarity protection.

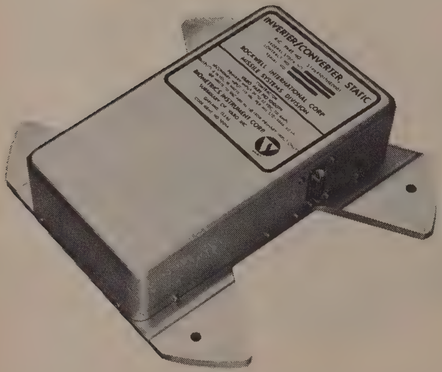
Varo Model 4384 Solid State Airborne Inverter provides precision 400 Hz AC power for the gyro-stabilized guidance system of a modular air-to-surface missile. The inverter uses 24-30 VDC primary power (Per MIL-STD-704A) from either the aircraft buss or missile on-board batteries. Output power is 115 +7.5 VAC, 400 ±8 Hz, 120 VA, power factor 0.8 lagging to unity. Inverter dimensions are 4″ x 6″ x 6″ and it weighs a maximum of 8 pounds. Operating temperature range is −55°C to +72°C per MIL-STD-810B.

MISSILE CONVERTER/INVERTER



INVERTER/CONVERTER, STATIC
ROCKWELL INTERNATIONAL CORP
MISSILE SYSTEMS DIVISION
BIOMETRICS INSTRUMENT CORP

Missile Converter/Inverter, Model 4405, was designed to provide guidance system power for an advanced electro-optically guided missile. It incorporates unique circuit designs to insure low output AC voltage modulation to prevent guidance system error. Input power of 28 ±4 VDC is provided by missile batteries. AC output is 115 ±2.3 VAC, 400 ±8 Hz, 100 Watts. Distortion is 6% maximum at power factor 0.7 lagging to unity. DC outputs are ±15, ±0.5 VDC, 18 Watts. Unit measures 10.25″ x 5.8″ x 2.8″ and weighs a maximum of 12 pounds. Operating temperature range is −55°C to +55°C.

AIRBORNE INVERTER

An advanced airborne inverter, the Model 4375 offers advantages of lightweight and high efficiency. Input power (MIL-STD-704, Category B) of 21-29 VDC permits using the Model 4375 for most military airborne applications. Output is 115 ±4.5 VAC, 1ϕ, 400 ±5 Hz, 250 VA. Distortion is 4% maximum at power 0.75 lagging to unity. Input polarity reversal and short circuit protection are provided. Unit measures 10″ x 4.5″ x 6.0″ with a maximum weight of 12 pounds. Operating temperature range is −40°C to +71°C.

HIGH VOLTAGE POWER SUPPLIES

POWER SUPPLIES FOR FIRST GENERATION IMAGE INTENSIFIERS

Rugged, reliable high voltage power supplies are designed and produced by Varo for various First Generation Image Intensifier applications. Standard oscillator/multiplier configurations are available for single-, two-, and three-stage 18MM, 25MM and 40MM image intensifier assemblies. Automatic brightness control, positive or negative output, and other custom designs can be supplied.

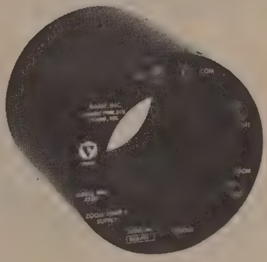
POWER SUPPLIES FOR SECOND GENERATION IMAGE INTENSIFIERS

Second Generation Image Intensifier power supplies are designed to meet the unique requirements of Second Generation Image Intensifiers. Automatic brightness control, manual gain control, bright-source protection and rapid-recovery response (flash recovery to 60% in 100 msec.) are some of the system requirements provided by these high voltage power supplies. Second Generation power supplies are offered for standard inverter tube configurations as well as for custom and gated designs.

GATED POWER SUPPLIES

Gated High-Voltage Power Supplies for a variety of Gated Image Intensifier applications have been developed at Varo. Applications include gated I-SIT camera systems, special purpose laser systems, and other gated imaging techniques. High speed rise/fall times of 70-100 ns typically, pulse widths of 300 nanoseconds minimum, externally adjustable output voltage control for Automatic Gain Control (slew rates 0.3 sec. typical), and floating gate configurations are examples of some of the features available. Many years of experience in Image Intensifier System design enables Varo to solve your high voltage system requirements.

SPECIAL PURPOSE POWER SUPPLIES



Varo has designed and produced many custom high voltage power supplies for a wide variety of specialized customer applications. The supply illustrated (Model 3220) is designed to operate an 80/40MM gated/Zoom Image Intensifier System. Operating modes include two-position Zoom, gate on/off/standby, and ABC. All control functions are TTL compatible. The unit weighs less than 4 pounds.

VARO

HIGH-PERFORMANCE BRUSHLESS GENERATORS & GENERATOR SYSTEMS

VARO INC ELECTROKINETICS DIVISION

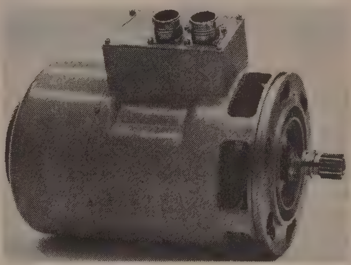
VARO

VARO EK DIVISION develops and manufactures lightweight AC and DC brushless generators and generator systems ranging from milliwatt to multi-kilowatt sizes. These units are being used in a wide variety of high performance military and commercial applications, including aircraft APU's and EPU's, missile, drone and RPV primary on-board electrical power, hand-crank power units, engine fuel control and engine ignition.

The product line includes heteropolar, homopolar and flux switch types operating at speeds up to 100,000 RPM. Complete systems include static devices such as regulators, TRU's and engine sequence and safety units.

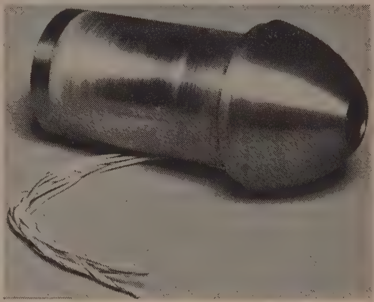
The units shown below represent a few of the types commonly designed and manufactured. We may have an existing design that will meet your requirements. Call or write Department 420, VARO INC EK DIVISION.

5071 GENERATOR



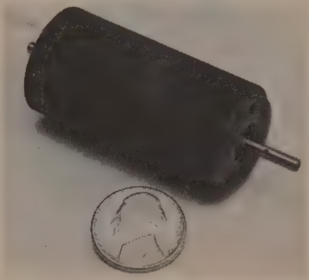
10 KVA Continuous Duty 400 HZ, 3 Phase, Brushless, Aircraft Emergency Power Generator.

4992 GENERATOR



4 KW, 28 VDC Generator for On-Board Missile Prime Power.

4978 GENERATOR



4 to 10 Watt, High Frequency, Single Phase Brushless Generator.

4955 GENERATOR

5 KVA Continuous Duty 400 HZ, 3 Phase Brushless Aircraft APU Generator with Integral Turbine Ignition Generator.

CUSTOM POWER SUPPLIES—VENUS SCIENTIFIC, INC. also will build custom power supplies to your specifications. Frequently an "off the shelf" power supply can be selected from stock, thus providing a considerable saving in cost and time, in addition to using a proven design.

If, however, a custom power supply is necessary, VENUS will be glad to offer a quote. Please contact our Engineering Sales Department for further details.

Wilmore
MODEL 1240-125-48-12
POWER ON
OUTPUT ADJUST

- HIGH EFFICIENCY
- ADJUSTABLE OUTPUT VOLTAGE
- GOOD VOLTAGE REGULATION
- INPUT-OUTPUT ISOLATION
- LOW OUTPUT RIPPLE
- CONSERVATIVELY DESIGNED

SERIES 1240 CONVERTERS

Specifically designed to meet the needs of industrial users and original equipment manufacturers, the twelve extremely-reliable Series 1240 dc-to-dc power converters operate from 48-V and 125-V batteries, and provide either 300 or 600 watts of well-regulated well-protected dc output. Units are rated for continuous operation throughout an ambient temperature range of −20°C to +70°C. They are particularly well suited for application within the electric-utility, telephone, mining, and other industries. Size 5¼" x 19" x 14"; weight 36 to 43 lbs. Request Bulletin 4011.

MODEL NUMBER	INPUT VOLTAGE	SETTABLE OUTPUT VOLTAGE RANGE	OUTPUT CURRENT	EFFICIENCY HALF TO FULL LOAD

SERIES 1260 CONVERTERS

Featuring dual, triple, and quadruple outputs, thirty of the growing Series 1260 industrial/OEM dc-to-dc converters are listed below. Three standard input voltages are available covering operation from 24-V, 48-V, or 125-V batteries. All units provide electrical isolation between output terminals, input terminals, and chassis ground; all are electronically protected against overloads and short circuits; and all employ only well-derated hermetically-sealed silicon semiconductors. These high-quality high-efficiency converters are ideally suited to power a broad array of sensitive communication, control, and protective equipment. For applications involving other input/output combinations, or higher or lower power levels, please contact our engineering applications group.

MODEL NUMBER	OUTPUT NO. 1		OUTPUT NO. 2		OUTPUT NO. 3		OUTPUT NO. 4	
	VOLTAGE RANGE	CURRENT	VOLTAGE RANGE	CURRENT	VOLTAGE RANGE	CURRENT	VOLTAGE RANGE	CURRENT

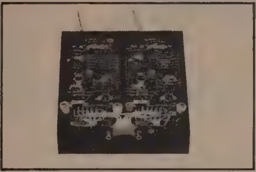
-BF	+12 Vdc ±5%	10 Adc	+15 Adc ±5%	3.0 Adc				
1263-V_{IN}	Triple-Output Converters for V_{IN} = 24, 48, or 125 Vdc Input*							
-BG	+5 Vdc ±5%	5 Adc	+12 Vdc ±5%	10 Adc	+15 Vdc ±5%	3.0 Adc		
-AH	+5 Vdc ±5%	20 Adc	+15 Vdc ±5%	2.0 Adc	−15 Vdc ±5%	2.0 Adc		
-BI	+12 Vdc ±5%	10 Adc	+15 Vdc ±5%	2.5 Adc	−15 Vdc ±5%	0.2 Adc		
1264-V_{IN}	Quadruple-Output Converters for V_{IN} = 24, 48, or 125 Vdc Input*							
-BJ	+5 Vdc ±5%	5 Adc	+12 Vdc ±5%	10 Adc	+15 Vdc ±5%	2.5 Adc	−15 Vdc ±5%	0.2 Adc

*24 Vdc input units operate over an input range of 20 to 30 Vdc, 48 Vdc units over a range 40 to 60 Vdc, and 125 Vdc units over 100 to 140 Vdc.

WILMORE ELECTRONICS CO., INC. • P.O. BOX 2973 • DURHAM, N. C. 27705 • PHONE (919) 489-3318

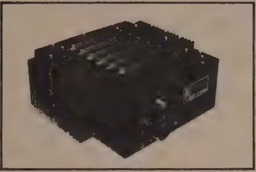
Wilmore Electronics Company, Inc.

SOLID-STATE POWER CONVERSION EQUIPMENT



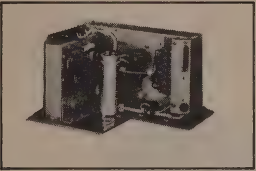
DC-TO-DC SPACECRAFT POWER CONVERTERS

Wilmore converters are being used in numerous unmanned spacecraft including OSO, IMP, LES-6, SAS and Pioneer 10. Proven in-depth circuit-design, mechanical-design, quality-assurance and program-management experience is provided for such requirements. Example shown is a dual-output 10Vdc-to-2500Vdc flight unit providing better than 0.1% regulation against combined effects of line, load and temperature.



HIGH-VOLTAGE LASER POWER SUPPLIES

Pictured is a 300-joule/sec capacitor-charging converter for pulse-discharge applications. Particularly well suited for high-pulse-repetition-rate applications, it provides a regulated output voltage selectable from below 1000 to over 2500 Vdc. A wide range of light-weight high-efficiency converters for both pulsed and CW laser applications is available including the new 1200-joule/sec unit. Wilmore laser power-supply products range from inexpensive industrial items to fully-qualified military equipment.

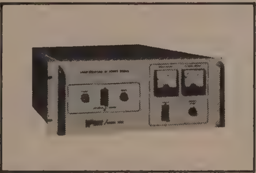


INDUSTRIAL SOLID-STATE POWER CONVERTERS AND CONTROLLERS

Often extrapolating directly from design techniques derived from its aerospace activities, Wilmore designs and manufactures a great variety of custom industrial power-processing equipment. Examples include custom dc to ac inverters, frequency changers, dc to dc converters, motor controls, nondissipative regulators, SCR controls of various types, special battery chargers, etc. Complete in-house design and manufacturing capability permits short delivery times and lower costs.

DC-TO-DC CONVERTER MODULES

Wilmore's quality dc-to-dc converter modules are designed for a variety of point-of-use situations. Typical input voltages are 12V, 24V, 28V, and 48V, although modules can be provided for any input voltage up to approximately 300 Vdc. Regulated and unregulated modules may be obtained with output voltages ranging from 5V for logic power to several thousand volts for laser applications. Modules can be supplied either encapsulated or unencapsulated and in essentially any mechanical configuration. Consult our engineering applications group for your converter module needs.



UNINTERRUPTIBLE AC POWER SOURCE (UPS)

Protects critical loads from temporary loss of commercial ac power. True no-interruption performance. Well-regulated 115-V sine-wave output. Completely self contained. Built-in "float" battery charger and sealed long-life batteries. Electronic overload protection. MODEL 1202 is rated 250 VA. Depending upon load, reserve time for internal-battery operation varies from a minimum of 10 min. to more than one hour. 7" x 19" x 19". 90 lbs. $975. Request Bulletin 3011.

OEM SWITCHING AC-TO-DC POWER SUPPLIES

Single-output and multiple-output transistor switching power supplies are smaller, run cooler and are more efficient than traditional series-pass supplies. Unit shown provides three different regulated output voltages, 75 watts of output power, weighs less than 2.5 pounds, and occupies a volume of less than 55 cubic inches. Contact our applications group for your switching power supply needs.

SOLID-STATE POWER CONVERSION EQUIPMENT

HIGH EFFICIENCY DC-TO-AC INVERTERS

Wilmore
MODEL 1057-12
300-WATT INVERTER
OUTPUT
INPUT
POS +
NEG −

Model 1057

- **ECONOMICAL ALTERNATIVE TO SINE WAVE INVERTERS**
- **DESIGNED TO POWER SENSITIVE INSTRUMENTS**
- **EXCELLENT FREQUENCY AND VOLTAGE STABILITY**
- **TYPICAL EFFICIENCY 85% TO 90%**

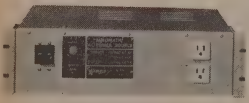
For years the Model 1057 DC-to-AC Inverter with its three level step approximation to a sine wave has been an inexpensive alternative to sine-wave power. The switching-mode wave-shaping technique used yields a wave shape that offers the same peak-to-rms ratio as a true sine wave, but with high efficiency, typically 85% to 90% from half to full load. Designed for users who need remote power for sensitive equipment of all kinds, including recorders, oscilloscopes and video tape recording equipment, the Model 1057 has proved in years of field testing to be a rugged and reliable source of high quality 60 Hz power. The Model 1057 is available in 12-volt, 24-volt and 28-volt input versions. Consult price page for more detailed specifications or request Bulletin 9091-B.

- **RUGGED INVERTER FOR HEAVY DUTY LOADS**
- **500 WATTS CONTINUOUS, 1000 WATTS SURGE**
- **MODULAR UNITS EASILY PARALLELED**
- **TYPICAL EFFICIENCY 80% TO 90%**

Model 1172

Many jobs require a heavy duty, but inexpensive ac power source. The Model 1172 was designed to start and to run refrigerator motor-compressor units, one of the most difficult inverter loads of all. It has been used routinely for powering small hand tools such as drills and saws and other difficult inverter loads. The 500-watt Model 1172 features a 1000-watt surge capability and, because of its modular design, two or more units may be paralleled for added continuous and surge power. Available as accessories are the paralleling kit and a mounting bracket to facilitate rapid transfer of the inverter between vehicles. The Model 1172 is available in 12-volt, 24-volt and 32-volt input versions. Consult price page for more detailed specifications or request Bulletin 1101.

NEW AUTOMATIC STANDBY AC POWER SOURCE



Model 1252

When commercial power is interrupted, the Model 1252 Automatic Standby AC Power Source continues to supply needed 60-Hertz power to critical loads by switching to inverter operation and drawing its power from external batteries. When ac power is restored, the Model 1252 automatically returns to normal operation, while the internal battery charger recharges the batteries. Units are available with an internal Model 1057 inverter or a Model 1172. Units are 5¼″ h by 19″ w by 14″ d and are available for bench or rack mounting. Prices begin at $475.00. Request Bulletin 5041.

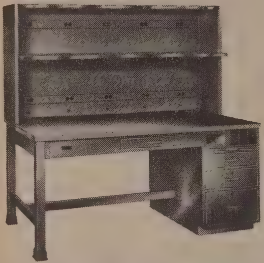
LABORATORY TEST FURNITURE

FOR

INDUSTRIAL • MILITARY • SCHOOL

APPLICATIONS

Formica's sectional electronic test furniture is designed *by* engineers *for* engineers to provide the utmost in serviceability. Individual prefabricated sections are constructed to afford the greatest possible number of combinations, then factory assembled to suit the exact requirements of your laboratory or classroom. Design features also provide at least 50% more available working area over other types now in use. Made of heavy gauge furniture steel, Formica's rugged construction means many extra years of service even in hard use.



For school purposes, the unusual adaptability of Formica's many specialized turrets and pedestals — whether for single or double set-ups

GARDNER DENVER Wire-Wrap* MACHINES

AND ELECTRONIC PRODUCTION EQUIPMENT

WIRE-WRAP * TERMINAL LOCATOR WITH WIRE STRIPPER

The Gardner-Denver 14YN Terminal Locator is designed as a completely self-supporting unit to meet production requirements that fall between hand wrapping and the fully automatic machine.

Increased productivity coupled with accuracy and quality, is now economically feasible for electrical equipment manufacturers. The Terminal Locator is also ideally suited for twisted-pair wiring and wire sizes not compatible to automatic wiring.

The coupling of the Gardner-Denver 14YA Wire Preparation Unit to the Terminal Locator has revolutionized semi-automatic wiring by placing the wire preparation where it should be, under the control of the machine operator.

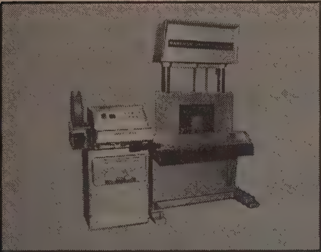
14YA

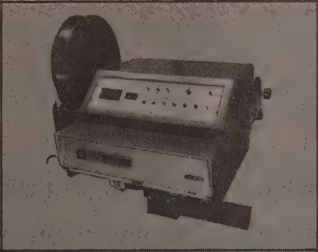
WIRE PREPARATION UNIT

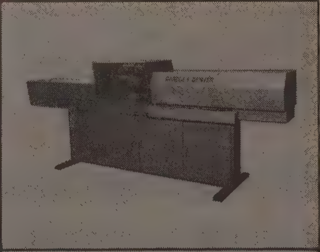
The 14YA Gardner-Denver Wire Preparation Unit is designed to provide precision wire cutting and stripping to low or high volume users. Throughout the past decade, millions of feet of various type insulated wire has been processed through its predecessor in the Gardner-Denver Automatic Wire-Wrap Machine.

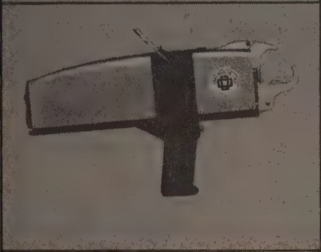
14YT1 TWISTED-PAIR WIRE PREPARATION UNIT

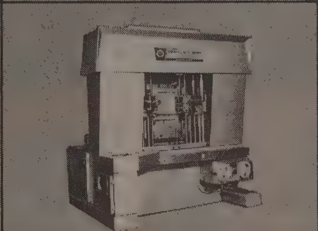
The Gardner-Denver 14YT1 Twisted-Pair Wire Preparation Unit is designed to give increased productivity to the growing demand for twisted-pair wires. The tedious job of preparing twisted-pair is now eliminated. The 14YT1 will automatically feed, cut-strip, and twist for a variety of applications at a fraction of the cost normally associated with this operation.



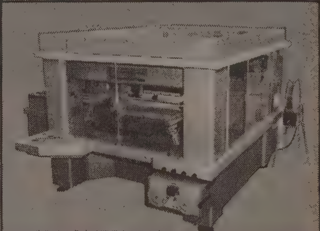








14FV VERTICAL



14FS HORIZONTAL

14-090A CABLE BINDING TOOL

The Model 14-090A Cable Binding Tool ties wire bundles up to 1" in diameter. One squeeze on the trigger of this hand-held pneumatic tool wraps nylon tape around bundle — tensions, locks, and cuts off . . . in only one second . . . with no waste. Tool automatically adjusts to size of bundle being tied, so only one size tape and closure is required. Tape is fed through the back of tool from a continuous roll and is sealed by a nylon closure.

AUTOMATIC WIRE-WRAP * MACHINES

Gardner-Denver now offers two Automatic Wire-Wrap Machines to the electronics industry.

The 14FV Vertical Wire-Wrap Machine is designed for use with wiring panels having a terminal wrap area up to 22 x 22 inches. The 14FS Horizontal Wire-Wrap Machine will accomodate the larger wiring panels having a terminal wrap area up to 27 x 27 inches, and panel wrap area to 27 x 47 inches. Depending on wiring requirements, these machines offer quality, low cost, high production advantages not previously available to the user. Automatic wire termination is now an economic reality for many companies, who in the past, may have overlooked the cost saving advantages of automatic equipment.

*Registered Trademark of Gardner-Denver Company

MAGNETIC CORES
MOTOR & SYNCHRO LAMINATIONS

We supply high permeability cores for data recording and high frequency use. Cores are of etched layers, laminated, and supplied in ready-to-wind condition.

Etched motor and synchro laminations with as many as 300 poles supplied adhesive coated, laminated, or individually.

the buck stops here

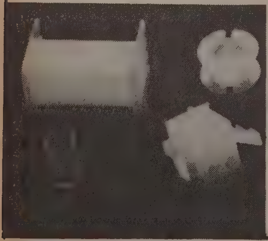
Single source responsibility with all in-plant facilities and services from concept to delivery. Complete design and engineering ability, precision tool making, production and quality control to meet or exceed customary tolerances.

Harbison does it all ....

Specializing in injection molding of electrical and electronic components including coil forms, bobbins and connector housings. Materials such as glass filled nylon, Zytel 101, Valox, Delrin, Noryl, and phenolics.

modular family molding !!!

The economies of multiple cavity molding with the precision and quality of custom molding . . . allow a mix or match with significant savings. All this and industry-beating delivery time!



Harbison customers are sold but **never** forgotten

OTTO® adhesive/epoxy/solder dispensers

• Air operated • Instant cut-off • Simple installation & set-up

OTTO dispensers comprise a wide range of types to automatically and precisely apply single and multi-component compounds. Whether dispensing precise droplets or volume encapsulations, OTTO's air operated positive displacement principle assures safe, accurate and tidy application without introducing air into the material.

All OTTO dispensers feature safe, air operation, instant material cutoff, effective and quick clean-up easy set-up and adjustment and improved time-motion productivity and operator morale.

We also design and manufacture complete automated production stations to your requirements.

injectors

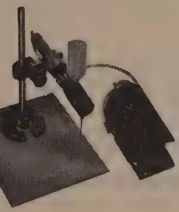
OTTO® Injectors apply single part or pre-mixed epoxies and other compounds, from minute droplets to encapsulation of complete assemblies, with minimum operator motion. A wide range of viscosities are handled equally well.

The nozzle design eliminates the chance of trapped air and bubbles in the finished product. Instant cutoff—no dripping—keeps the work area and product clean. Easy clean-up of reusable nozzles or no clean-up with disposable nozzles minimizes set-up and maintenance.

The A5 series consists of the bench mounted variable air metering control and foot control, nozzle-reservoir and pressure head. Complete specifications in Bulletin A5.

OTTO Model No.	Pressure Head Diameter	Nozzle		
		Type	Length	Capacity
A5-1	½"	Reusable	3 in.	.6 oz.
A5-2	½"	Reusable	6 in.	1.0 oz.
A5-4	1"	Disposable	5 in.	1.0 oz.
A5-6	1¼"	Reusable	4 in.	5 cu. in.
A5-7	1¾"	Disposable	10 in.	12 oz.

shotmeters

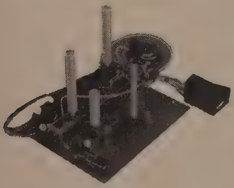


OTTO Shotmeters dispense precise and consistent amounts of adhesives and epoxies. Variable output is easily set while a measured shot or fractional shot can be pulsed at operator's option.

Because of the high pressures the OTTO A6 develops on the material, even heavy, thick compounds can be precisely dispensed. Five standard output sizes are available. Complete specifications in Bulletin A6.

OTTO Model No.	Max. Shot Size (cu. in.)	Max. Output Pressure 100 PSI (Input)
A6-1	0.0027	10,000
A6-2	0.011	7,000
A6-3	0.044	1,800
A6-4	0.100	800
A6-5	0.175	450

mixer/dispensers



OTTO mixer/dispensers take 2 and 3 part components from gravity containers, pressure pots or barrel pumps and dispenses precise amounts to the work.

A proven principle in valving, integral with the measuring cylinders, provides accurate measuring and mixing by insuring complete synchronization.

Shot size may be predetermined in a variety of volumes or controlled directly by the operator.

Simply plug into a 3/8" air line with pressure to 90 PSI. It's a turn-key machine, ready for immediate production. Bench area required is 18x36 inches. Complete specifications in Bulletin A3.

OTTO Model No.	Shot Size		Max. Output Pressure —100 PSI
	Min.	Max.	
A3-5	.2 cu. in.	40 cu. in.	500
A3-6	.001 cu. in.	.33 cu. in.	5000

OTTO-DOT T.M. micro dispenser

Micro spheres, .015" dia. to .625" dia., of single and pre-mixed dual component compounds can be applied to I.C. chips and other miniature electronic components. All contacts and settings for easy set-up and adjustment are on the front panel of the control unit. Also provided is a means for remote operation by photo electrics, limit switches, etc. Applies RTV, solder and brazing creams, adhesives, fluxes, solvents, cynoacrylates and greases.

A full range of nozzle capacities and special arrangements available. Requires 20-120 PSI and 115 VAC. Dimensions: 12"W x 5"H x 7"D. Complete specifications in Bulletin A4.

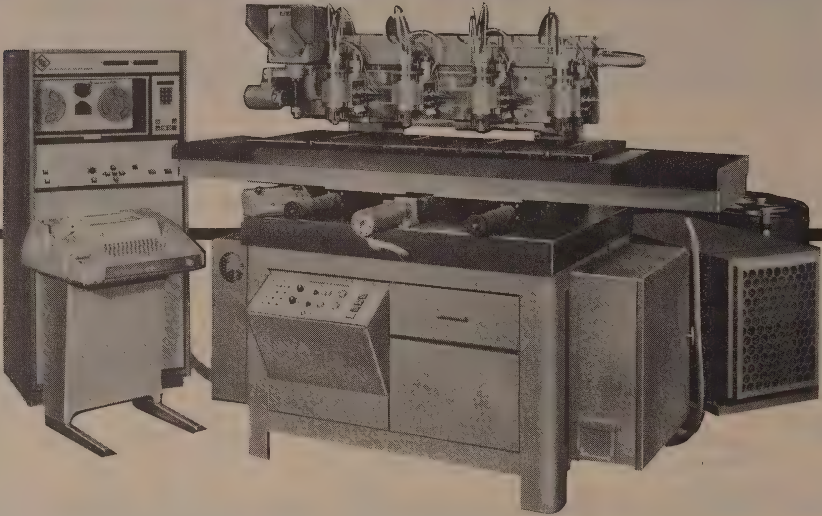
SLO-SYN®
NC DRILLING MACHINE & NC DRILLING/DIGITIZING MACHINES



- Models with digitizing capability available with 3 or 4 drilling heads; drilling only model has 4 heads.
- Heavy duty, high speed, liquid cooled spindles
- High capacity chip removal system
- Precision digitizing of undimensioned artwork or prototype eliminates manually writing and typing programs
- Numerically controlled drilling, to 150 cycles per minute
- Visual display of program block and table position
- Automatic target centering in grid mode
- Controls for manual positioning, program back-up and mirror imaging
- Abbreviated tape format for fast output and efficient storage

SPECIFICATIONS

TABLE

Table Travel	24 x 18 inches.
Positioning Resolution	.001 inch (0.0005 inch or 0.01mm optional).
Table Accuracy	±.001 inch/foot.
Table Repeatability	Within .0005 inch.
Table Dimensions	Top size 56 x 19 inches.
Positioning Elements	Ways — Ball bushings on 1¼ inches dia. ground steel rods continuously supported. Lead Screws — Preloaded ball. Drive — Direct coupled SLO-SYN motors
Load Limits	Vertical Top Force — Not to exceed 100 lbs. at any one point or 500 lbs. evenly distributed over the 56 x 19 inch top areas. Fixture and Workpieces — 150 lbs. evenly distributed over the 56 x 19 inch top area.

NUMERICAL CONTROL

Data Input	Punched paper tape, ASCII coded, word address, incremental; or manual dial with index and jog.
Display	Block number. Absolute X and Y position in digitizing model.
Control Output	Power to drive SLO-SYN motors. Actuation and interlock of spindle system.

SPINDLE SYSTEM

Drilling Capability	2 Panels — 24 x 18 inches 3 Panels — 18 x 18 inches 4 Panels — 12 x 18 inches
Working Speed Range	5,400 to 54,000 rpm.
Cooling	Liquid.
Protection	Electronic.
Collet	Precise Uni-Chuck ⅛ inch shank drills only.
Drilled Hole Range	0.0135 (No. 80) to ⅛ inch dia. (1¼ inch with P collet)
Rapid Rate	120 inches per minute at 80 to 100 psi.
Feed Rate	0-100% of rapid rate.

DIGITIZING SYSTEM

Position Control	Remote box with position control buttons and grid selector dial.
Position Display	X, Y and block number in numerical control.
Target Resolution	10X viewer with 6 inch dia. screen.
Date Input	Punched paper tape and printout at 10 cps on ASR33 teletypewriter.

TYPES

SNC2418D-4:	Includes numerical control, table and 4-head spindle system.
SNC2418DIG-3:	Includes numerical control, table, 3-head spindle system and digitizing system.
SNC2418DIG-4:	Includes numerical control, table, 4-head spindle system and digitizing system.

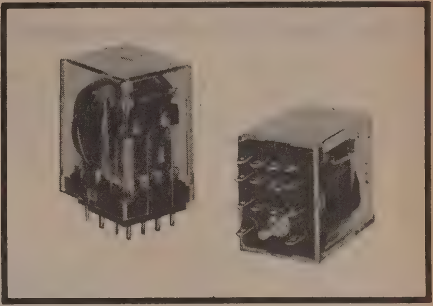
SIEMENS RELAYS



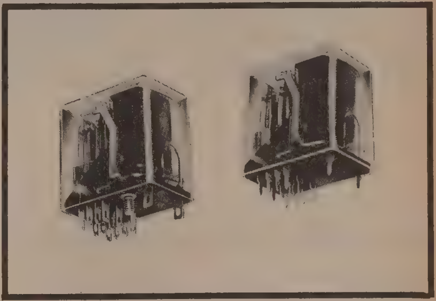
The MAT4 relay type is the widest used general purpose industrial relay today, slightly larger than 1 cubic inch. They are used in such applications as process controls, data processing, business machines, and alarm and signal circuits where reliability is important.

Interchangeable With All Comparable Types
POTTER & BRUMFIELD — Types: KHP, KHU, KHC and KHF
SIGMA — Type 67R
CORNELL-DUBILIER — Type A104

FEATURES

- UL File E51802
- 4 PDT Contact Arrangement
- 3 Amp Contacts
- AC or DC Coils
- Sockets With Solder or P.C. Terminals
- Low Cost
- Plug-in or P.C. Terminals
- Dust Proof Enclosure

CRADLE MODEL V23028

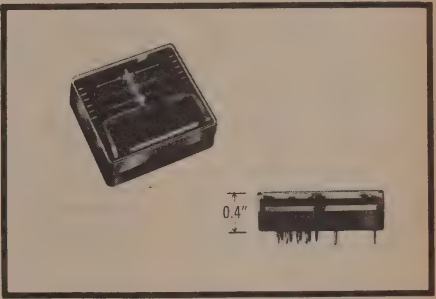


2PDT, 4PDT, 6PDT. Plug-in and printed circuit terminals. Magnetic latching and sensitive types. UL listed, 6, 12, 24, 48 and 115 VDC coils. Replacement for Allied Control Types T154, TP154, TPF154, T163 and TP163; Potter & Brumfield R10E; Sigma 62R and 70R; American Zettler AZ420, AZ421 and AZ431; Magnacraft (Hart-Advance) 67.

FEATURES

- UL File E48393
- High Reliability and Long Life at Low Cost
- 2 Amp & 5 Amp Designs
- Interchangeable With all Standard Cradle Relays

LOW PROFILE MODELS



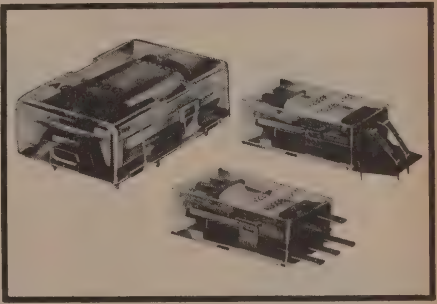
MODEL V23030 — 4PDT, 6PDT. Compact units with overall height of 0.4 in. Bifurcated contacts. 6, 12, 24 and 48 VDC coils.

MODEL V23027 — slim compact designs 8 amp contact rating SPDT contacts. P.C. Board Mounting on 0.1″ grid spacing. Low Cost.

FEATURES

- Low Cost Design
- Allows for 0.5″ Center-to-Center P.C. Board Spacing
- Ideal for Communication Systems, Data Processing and Automatic Control Systems

LOW PROFILE PRINTED CIRCUIT & POWER MODELS



MODEL V23012 — DPDT compact P.C. board types for 0.1 in. grid spacing. Overall height 0.401 in. above board. Single or bifurcated contacts. Low power consumption. 6, 12, 24 and 48 VDC coils.

MODEL V23016 — SPST-NO double make or SPDT contacts. Rated at 7.5 Amps steady state and 15 Amps in-rush. Printed circuit or fast-on terminals. 6, 12, 24 and 48 VDC coils.

FEATURES

- Low Cost
- High Reliability
- Low Operating Power
- Standard 0.1″ Grid Spacing for P.C. Terminals

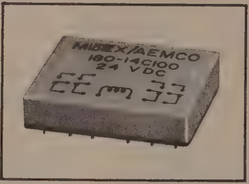
Type 180 4PDT

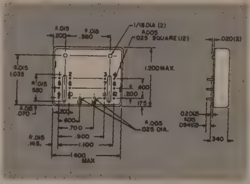
Miniature 2 Ampere Printed Circuit Mounting Industrial Relay

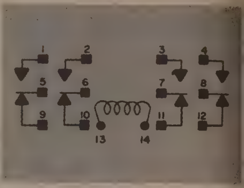
The Type 180 4PDT relay can provide low-level to in excess of 2 amperes at 28 VDC switching in a PCB package only 0.34 x 1.4 x 1.2 inches in size. The contacts can also readily switch 2 amperes at 120 VAC, 50% p.f.

The Type 180 provides a minimum of 1/16 inch clearance through air and 1/8 inch over-surface spacing between current carrying members. Low level gold, fine silver, or silver cad-oxide contacts are available. White nylon cover. Certain models U/L recognized

OUTLINE DIMENSIONS







The standard part number (e.g., 180-14C100) has a sensitive, full coil, dissipating only 0.72 watts nominally at 25°C. The U/L spaced versions (e.g.,180-14C1U0) require 1.20 watts nominally at 25°.

ELECTRICAL CHARACTERISTICS

CONTACTS:

Type 155 1, 2 & 3PDT

Open & Dust Covered
5 & 10 Amp
Industrial Relay
U/L & CSA Recognized

The Type 155 is a low cost 5 and 10 ampere industrial relay, available in either open or dust covered versions. A variety of solder lug, .187 quick connect, solderless wrap or plug-in terminals are available. All leads terminate on barrier for easy installation.

The type 155 is U/L recognized to 10 amperes, 1/3 H 115 VAC; 6 amperes, 1/2 HP, 240 VAC for silver cadmiu oxide contacts.

Silver contacts are 5 amp, 1/8 HP, 120 VAC; 3 am 1/4 HP, 240 VAC. (Also U/L recognized.)

Type 156 4PDT

Miniature 5 Ampere
Industrial Relay
U/L & CSA Recognized

The Type 156 4PDT Relay is a compact and versatile industrial relay. Low level switching gold contacts, universal gold flashed silver, or silver cadmium oxide power contacts are available. Units are dust covered. Terminals are solder/plug-in, taper tab or printed circuit.

Various solder, PCB or the new solderless wrap sockets provide versatile mounting.

Type 156 options are pushbutton actuators, opposite pole barriers, indicator lamps, special mounting brackets and 2 PDT contacts.

All Midtex/AEMCO dust covered Type 156 Relays with 3/32" silver or 3/32" silver cadmium oxide contacts have Underwriters' Laboratories Component Recognition for Motor Controllers through 240 VAC in accordance with Underwriters' Laboratories Standard 508 "Industrial Control Equipment." They provide through air spacing of 1/16" minimum and over-surface spacing of 1/8" minimum, and are recognized for 1/10 horsepower motor control applications at 120/240 VAC. Opposite polarity on adjacent poles U/L is also available.

Sockets are constructed to meet U/L requirements for these ratings.

The gold alloy and palladium contact models meet the same spacing and insulation requirements, but are meant for lighter contact loads.

Certain hermetically sealed models are also U/L recognized.

**#731R chassis punch available from Greenlee Tool Co., Rockford, Illinois*

Type 157 1, 2 & 3 PDT

Open & Dust Covered
5 & 10 Amp
Industrial Relay
U/L & CSA Recognized.

The Type 157 3PDT Relay is a rugged power driver, offering superior 3/16" through air and 3/8" over-surface spacing. An interlocked frame and contact block prevents contact misalignment during plug-in. Open or dust covered. The relay is available with neon bulb indicator lamps and push-to-operate buttons.

A magnetic latching version provides a unique switchable core, which cannot be falsely latched.

All Midtex/AEMCO catalog Type 157 Relays, except magnetic latching, have Underwriters' Laboratories Component Recognition as Motor Controllers through 600 VAC in accordance with U/L Standard 508 "Industrial Control Equipment." They provide through air spacing of 3/16" minimum and over-surface spacing of 3/8" minimum and are recognized for 1/2 HP motor controller applications at 240/480/600 VAC (1/3 HP at 120 VAC).

Sockets are constructed to meet U/L requirements for these ratings, except the P/C board socket.

Chassis mounted open relays must employ 1/32" additional insulation between mounting surface and relay, to insure 1/2" over-surface and through air to the mounting surface.

Type 158 2PDT

Miniature 10 Ampere Industrial Relay

DESIGNED FOR U/L RECOGNITION Midtex/AEMCO dust covered Type 158 Relays with 5/32" Silver Cadmium Oxide contacts are designed for Underwriters' Laboratories Component Recognition for Motor Controllers through 240 VAC in accordance with Underwriters' Laboratories Standard 508 "Industrial Control Equipment." They provide through air spacing of 1/16" minimum and over surface spacing of 1/8" minimum for 1/3 horsepower motor control applications at 120/240 VAC. Sockets are U/L recognized. This relay is physically identical to the Type 156 on pages 4 and 5.

Type 159, 160, 166 1PDT

Mercury-Wetted Contact Relay
SPDT
Printed Circuit Module

The Mercury-Wetted Contact Relay is one of the most reliable relays on the market, and is used extensively in telephone communications, process computer interface, or any critical application requiring billions of operations life, stable contact resistance and faster than 2 millisecond operate speeds.

The type 159, 160 and 166 utilize a 2 ampere contact, Form C or Form D (specify) contact action.

See Midtex Engineering Bulletin 159/160 for proper contact protection requirements. Mounting within 30° of vertical required.

The adjustments available on the Type 159 and 160 Mercury-Wetted Relays are single-side-stable, bi-stable, or 1% dynamic balanced polar. The balanced polar adjustments provide less than 1% distortion in Neutral and Polar Telegraphy and Pulse Data Transmission applications. The low profile Type 166 is available in single-side-stable or bi-stable adjustments.

All types have single or dual coils, depending upon the requirement.

ELECTRICAL CHARACTERISTICS

CONTACTS

SPDT (Form C or Form D)

Material
Mercury-wetted platinum contacts
Hermetically sealed in an inert atmosphere

Rating
Switched Load:
2 amperes max
500 volts max
100 VA max

Carry Load:
5 amperes max
Not switched

Inrush Load:
20 amperes average for 10 microseconds
4 amperes average for 10 seconds
2 amperes average for 100 seconds

(NOTE: Suitable contact protection, must be provided.)

Bridging and transfer time
When operated by a single DC pulse, the bridging or transfer time will be greater than 50 microseconds but less than 500 microseconds.

Contact resistance
14 milliohms typical, 20 milliohms max
Stable within ±2 milliohms throughout life.

Life expectancy
1 billion operations minimum at rated load

COILS

Coil resistance
Type 159 Relay
Single wound up to 8600 ohms
Double wound up to 4275 ohms per winding

Power ratings
2 watts continuous

Temperature rise
30° C per watt

Type 160 Relay
Single wound up to 9000 ohms
Double wound up to 4500 ohms per winding

Power ratings
1.75 watts continuous

Temperature rise
35° C per watt

Type 166 Relay
Single wound up to 6100 ohms
Double wound up to 3000 ohms per winding

Power ratings
1.75 watts continuous

Temperature rise
35° C per watt

Operating characteristics
See Part Number Tables for specific operating parameters

GENERAL

Dielectric breakdown
Greater than 1000 VAC RMS 60 Hz all mutually insulated elements, except between windings of Bifilar Coils (See Coil Table).

Insulation resistance
1000 Megohms minimum at 500 VDC

Interelectrode capacitance
The capacitance across the switch capsule without external wires is approximately 1.5 pf.

Approximate capacitances in picofarads
Relay De-energized

	159	160-166
Open contact to armature	2.0 to 3.0	2.5 to 3.0
Open contact to coil	2.5 to 3.5	2.5 to 3.0
Armature to coil	7.5 to 9.0	7.0 to 9.0

Shielding
The module cover provides magnetic shielding.
An electrostatic shield between the switch element and the coil is also available.

Type 161 & 162 DPDT

Mercury-Wetted Contact Relay DPDT Low Level PCB Module

The Mercury-Wetted Contact Relay is well known for its superior reliability and long life, coupled with fast response times. The Type 161 and 162 low level DPDT units provide bounce-free contact switching, with minimal thermal EMF. Contact noise on closure decays rapidly to a low level, providing ideal signal input switching in data acquisition systems.

Contact rating is low level: 0-100 microamperes, 0-300 millivolts. The same contacts will switch up to 2 amperes (100 VA max.) properly suppressed.

The Type 161 and 162 Relays are available with DPDT contacts either Form C or Form D (specify). The relays are offered with one or two windings, with an optional electrostatic shield. Contact adjustments are single-side-stable or bi-stable.

A special adjustment insuring common open time of 50 microseconds minimum on transfer can be provided, suitable for "flying capacitor transfer switching."

Mounting within 30° of vertical required.

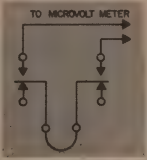
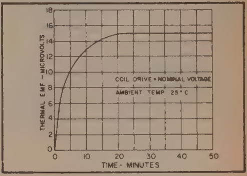
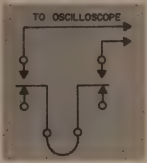
THERMAL EMF



Thermally induced DC error signals occur as a result of temperature gradients within the switching device. Low Thermal Relays are designed to minimize the effect of thermal gradients. The chart at right shows maximum thermally generated EMF plotted against time. Coil duty cycle is 100%. Generated EMF maximum is linear with respect to duty cycle.



NOISE



High frequency AC error signals occur as a result of the transient vibration of the moving members of the switching devices. The curve shows the envelope of peak noise inherent in Low Thermal Relays.

Solid State
Time Delay Relays
DPDT
10 Ampere Output

Midtex/AEMCO electronic time delay relays are extremely dependable, accurate and flexible, long life, time delay relays, providing a wide selection of operational configurations. They provide rapid reset times and excellent reapeatability which are especially desirable when accurate recycling is required. Combining the inherent reliability of electronic components for timing, with the proven high power multi-contact switching performance of AEMCO relays, this broad family of time delay relays is designed for demanding industrial and commercial applications.

A variety of fixed, knob-adjustable or external fixed resistor timers in different practical mechanical configurations are available to suit your requirements. Non-standard or custom designed units are available upon inquiry.

Two basic types of timing circuits are employed, depending upon the accuracy, repeatability and environmental requirements. The economy version Type 616 Series utilizes an R-C solid state trigger circuit combination to energize the output relay. The Type 615, Type 617 and 618 Series utilize an R-C solid state trigger circuit to drive a secondary solid state switch, which in turn energizes the output relay.

DEFINITIONS

Repeatability — delay time of the second and following operations will be within specified percentage repeatability, under constant operating environments and input parameters.

Total timing variation — variation limits of delay from set value, over rated input voltage and ambient temperature extremes.

Recovery time — time the control voltage must be interrupted *during* timing interval to produce a subsequent delay within the limits specified under Total Timing Variation.

Reset time — the time, after removal of input voltage, that is required to return the output relay to the de-energized position.

Recycle time — time the control voltage must be interrupted *after* timing interval, to produce subsequent delay within the limits specified under Total Timing Variation.

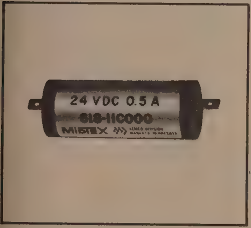
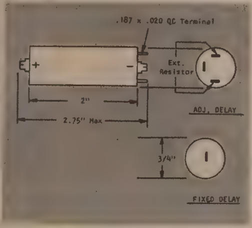
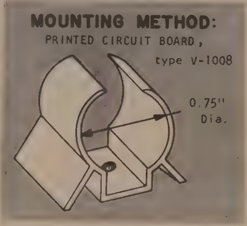
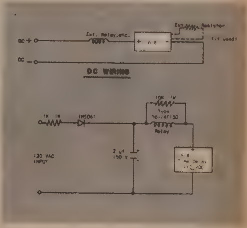
Type 618

The Type 618 is an electronic time delay module that provides a 0.5 or 2 ampere SCR output to drive relays, solenoids or lamps. By wiring in series with multipole power relays, a versatile timing function is attained. The module is available with 3/16" quick connect, solid axial or flying leads. Fixed and externally adjusted resistor units available.









ELECTRICAL CHARACTERISTICS

Delay function
delay on operate

Delay time

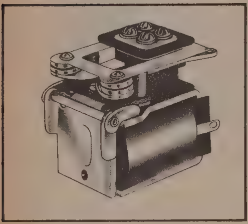
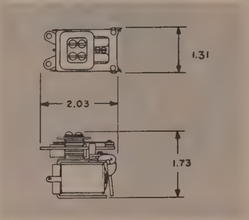
Type 83 & 136

General Purpose
Power Relays
20 to 30 Amperes

Type 83 is an unusually compact medium power relay with 20 amp contacts. Also available as double make or double break. Hinge pin rugged construction.





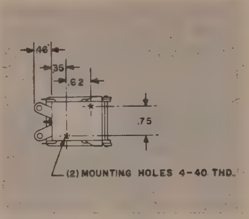
SPECIFICATIONS

Contacts
3/8" diameter silver cadmium oxide

Rating
20 amps at 26.5 VDC or 117 VAC resistive
Inrush 60 amps, 30 amps break
Inrush 60 amps, 30 amps break on DOUBLE MAKE CONTACTS
Carry 30 amps, break 50 amps on DOUBLE BREAK CONTACTS

Coil
Continuous duty. Max. power consumption is 10 VA AC, 3.5 watts DC

Terminals
Solder Terminals



Weight
Approximately 6 oz.

Mounting
Two holes tapped 4-40, on .62 centers

630-631 Solid State Relays

4-15 Ampere
120/240 VAC
Panel or Plug-In
U/L Recognized

The type 630 and 631 solid state relays are reed relay input-Triac output devices. As such, they are hybrid solid tate relays.

A much more thorough circuit analysis is required, however, before a solid-state or hybrid relay can be safely applied. Specifically, the following items must be defined as a minimum, before a solid-state or hybrid relay can be elected: maximum operating temperature; inrush curent at closure time and the associated current time contant; type of load, and the power factor if the load is inductive; operating voltage; possibility of false turn-on from line transients.

The following definitions should benefit the selection and pplication of these devices.

olid-state hybrid relay: A relay that combines the adantageous features of a reed relay or other hard contact evice with solid-state components in the load switching circuit. The load switching device is generally a Triac, and he reed relay input control provides isolation to the output circuitry.

Continuous/current rating: The maximum steady-state current that the Triac in the solid-state or hybrid relay can carry at or below its maximum case or ambient temperature.

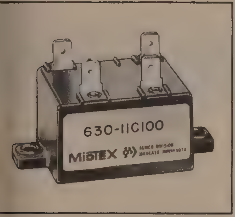
Surge current: The maximum value of inrush or overload current persisting for a short duration in which a properly heat-sinked device will handle and recover without damage.

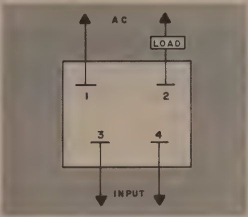
Minimum load current: The minimum current draw through the Triac which sustains proper Triac conduction.

Maximum load current: The maximum load current that the Triac can carry without damage at a given temperature in a properly heat-sinked assembly. The maximum load current is determined from the applicable derating graph for the type of heat removal employed.

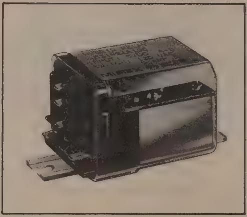
Snubber network: Protection circuitry built into the solid-state or hybrid relays which prevents Triac false turn-on when line transients exceed the forward blocking voltage of the device. The circuitry is generally an R-C network which minimizes the commutating rate-of-change of voltage with respect to time.

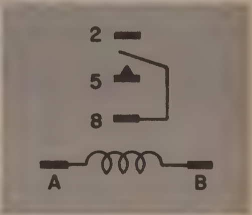
Type 630

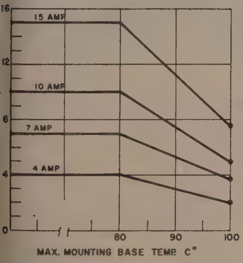




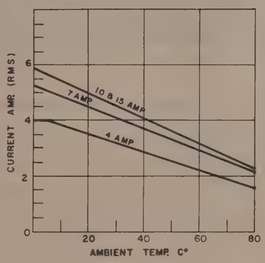
Type 631



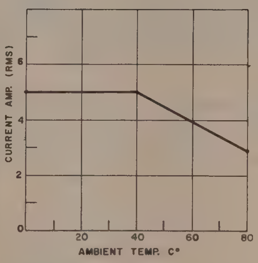




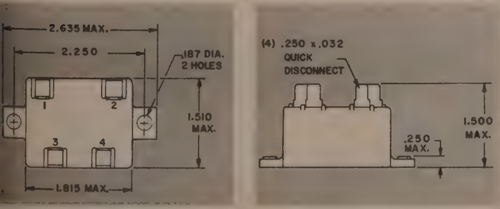
Type 630
Max. Load I vs. Allowable Case Temperature



Type 630
Mounted in free air. The Derating is improved considerably with a heat sink.



Type 631
Max. load I vs. allowable ambient temp. The 631 does not require an external heat sink.



Type 630 Dimensions.
or 631 dimensions, see Page 6-7 on the 157 relay.

120 VAC, 50/60 Hz
(200 V maximum peak)
240 VAC, 50/60 Hz
(400 V maximum peak)

CURRENT

Type 630
4, 7, 10, 15 and 30 Amps
inductive or resistive

Type 631
5 Amps
inductive or resistive

Note: For Type 630, the internal heat sink will allow a maximum current of 5 amps at 25° C. The maximum switching current is a function of device rating, ambient temperature, type of load and method of external heat sink. To obtain ratings above 5 amps, select desired output current model, seal Type 630 to proper heat sink with silicon grease.

Voltage drop
1.6 V typical at
rated current.

Leakage Current
6 MA max., 120 VAC/12MA
max., 240 VAC

Minimum load current
200 MA, RMS

Non-recurrent surge
4 Amp—60 A., 1 cycle
7 Amp—100 A., 1 cycle
10 Amp—110 A., 1 cycle
15 Amp—150 A., 1 cycle

Inductive load
4 V/micro-sec. maximum, commutating dv/dt, at rated current.

Life
500 million operations

Contact type
1 Form A (SPST—NO)

For Type 630 and 631 models

DC Input (volts)	Resistance (ohms)	Nominal Current (ma)
5	165	30
6	240	25
12	960	12.5
24	3,840	6.2
48	15,400	3.1

Dielectric breakdown
1,000 VAC, 60 Hz minimum between all mutually insulated terminals and mounting plate.

Insulation resistance
Greater than 10^{10} ohms I/O isolation

Weight
Type 630 1.25 oz.
Type 631 3.5 oz.

STANDARD PART NUMBERS

Type 630 15 and 30 amp devices are available. Consult factory for details.

Type 620

Cyclemaster Program Time Switch

The Cyclemaster is a synchronous motor time switch that provides up to 48 ON-OFF operations per day — timing intervals as low as fifteen minutes.

A NEW 14-day Sunday and Holiday Skipper permits programming for two full weeks. Eliminates operations on unwanted days.

NEW ease of setting — just dial the desired time. NEW "decorator" design — compatible with almost any surroundings. NEW ease of installation — all connections to large easy-to reach screw terminals.

USER-IN-MIND DESIGNED

new DECORATOR DESIGN — never before a time switch of such eye-appeal

new EASE OF SETTING — just DIAL the desired time. (An anti-reverse feature prevents improper setting)

new EASY INSTALLATION — large, accessible screw terminal connections

new LOW PRICES — you compare!

versatile switching — usable THREE WAYS: SPST open; SPST closed; SP transfer

new 14 DAY SUNDAY & HOLIDAY SKIPPER — permits programming for two full weeks

UP TO 48 OPERATIONS PER DAY — programming for almost any ON-OFF requirement

OPERATING VOLTAGE	MOUNTING	MODEL NO.	PREVIOUS MODEL NO.	
117 VAC 60C	Surface enclosure	620-7595	CM90-01	(a)

117 VAC 60C	No enclosure	620-7597	CM90-03	(b)
230 VAC 60C	No enclosure	620-7598	CM90-04	

SPECIFICATIONS

Timing action performed
Up to 48 ON-OFF operations in a single day. (A minimum interval of fifteen minutes is required between operations.)

Switching action
Single pole, double throw. (Usable three ways: SPST open; SPST closed; SP transfer.)

Load capacity
20 amperes at 125, 250, or 480 VAC. (1 H.P. at 125 VAC; 2 H.P. at 250 VAC.) (10 amperes at 125 VAC inductive.)

Terminals
Screw terminals conveniently located.

Method of programming
Trip pin. (12 supplied.)

Cyclemaster

Sunday and holiday skipper
Eliminates operations on unwanted days selected by inserting trip pins in the skipper wheel. A fourteen day wheel is standard. (Special Sunday and holiday skippers are available for all CYCLEMASTER models. Consult factory.)

Temperature range
—40°F. to +140°F.

Enclosure
Attractive hammertone gray cabinet with lockable hasp.

Dimensions
With enclosure 7-3/4"h x 4-7/8"w x 3-17/32"d; without enclosure 6-5/8"h x 4-1/2"w x 2-13/16"d.

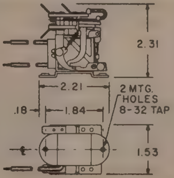
Shipping weight
with surface enclosure 5 lbs; without enclosure 3 lbs.

(a) U/L listed
(b) U/L Recognized

Type 48

Rugged 1 & 2 PDT Single Coil Latching Relay 15 Amperes

Especially designed for applications where it is desirable to eliminate continuous current to the relay coil. Relay contacts are changed from one position to another by a pulse to the single coil. Held in either position by a POSITIVE mechanical latching mechanism. An unlimited number of remote control points can be used with low voltage, low-cost interconnections. Fifteen and five ampere relays available. Fifteen ampere types meet UL or CSA spacing requirements. Quick-disconnect or solder terminals available on fifteen ampere relays. Leads terminate coils. Standard control voltages listed at right; others available on special order. Designed for U/L recognition. U/L 508, Industrial Control Equipment.



SPECIFICATIONS

Load rating
15 Amp, ½ HP at 120 VAC
10 AMP, 1 HP at 240 VAC

Switching action
Single pole, double throw; and double pole, double throw.

Contact data
¼" diameter pure fine silver.

Coil
Momentary duty type. Maximum power consumption: AC coils — 15 va. DC coils — 15 watts. Pull-in at 80% of nominal voltage.

Terminations
Contacts terminated by quick-disconnect terminals. Wire leads terminate coils.

Weight
Approximately 7 ounces.

Type 153 DPDT

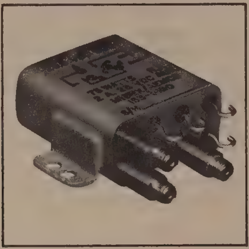
Crystal Can
Coaxial Relay
DPDT — 1000 Megacycles

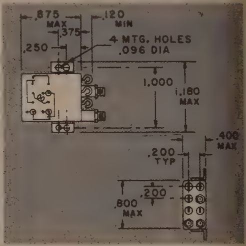
Micro-miniature coaxial relay offering the convenience of integral connectors. Packaged in the familiar 0.400" x0.800"x0.800" crystal can.

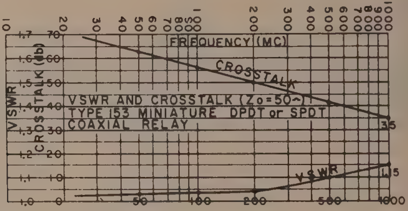
Relay connectors mate with Microdot ultra-miniature LEPRA/CON Connectors. Useable connecting cables are RG178 or RG196. **(Mating connectors not supplied)**

Relay is capable of switching more than 75 watts R. F. depending upon the system's VSWR. Available with either DPDT R. F. contacts; or SPDT R. F. contacts and a SPDT auxiliary contact. Meets applicable portions of MIL-R-5757 and MIL-S-3928.

Standard types listed. Other coils, mountings, etc., available on special order on an OEM basis.







ELECTRICAL CHARACTERISTICS

CONTACTS:

Arrangement
DPDT R.F.
SPDT R.F., SPDT Auxiliary

Rating
R.F. Contacts — 50 watts (depends on system VSWR)
Auxiliary — 2.0 to 5.0 amps, 26.5 VDC

Life expectancy
R.F. — depends on system VSWR
Auxiliary — 1 million operations at 2.0 amps 100,000 operations at 5.0 amps.

COILS:

Voltage
6 to 26.5 VDC

GENERAL:

Operate time
6.0 milliseconds at nominal voltage, 25°C.

Release time
6.0 milliseconds at nominal voltage, 25°C.

Temperature Range
—65°C to plus 125°C

Vibration
15 g's, 10 to 2,000 CPS

Shock
30 g's for 11 milliseconds

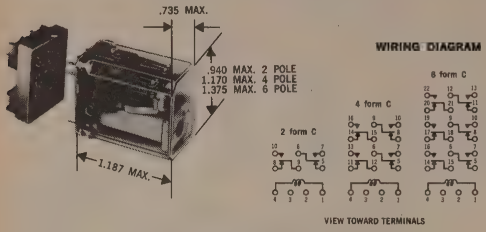
Miniature General Purpose Relays/AZ420 Series

Up to 6PDT Contacts — Dry Circuit to 5 Amp

General purpose miniature relays in plastic dust cover —
Interchangeable with other comb-actuated relays —
Combination solder and plug-in terminals.
UL-version listed under UL Component Recognition File 43203.



ELECTRICAL SPECIFICATIONS

Contact Rating: Noninductive load
Light Duty (Code L): Fine silver goldplated — low level to 2 amps @ 26 VDC or 1 amp @ 115 VAC
Heavy Duty (Code H): Silver cadmium oxide — 5 amp @ 26 VDC or Electrical: 10^6 at rated load
Other contact material available

Life Expectancy: Mechanical Operations: 10^8
Electrical: 10^6 at rated load

Contact Resistance: 50 milliohms max. initially
200 milliohms at end of life

Operate Time: At nominal operate voltage or current ≤ 8ms

Release Time: At nominal operate voltage or current ≤ 3ms

Contact Bounce: At 10 ma contact current:
2ms typ. at operate, N.O. contacts
3ms typ. at release, N.C. contacts

Dielectric Strength: 1000 Vrms; 500 Vrms across contact gap

Insulation Resistance: 10,000 megohms minimum @ 25°C, 100 VDC, 50% RH; Special insulation with 10^{14} ohms available

Coil Temperature: Max. 105°C (220°F)
Max. continuous coil dissipation 2.3W at 20°C.

Ambient Temperature
Operating: −55°C (−72°F) to 80°C (175°F) @ nominal operating voltage
Storage: −55°C (−72°F) to 105°C (220°F)

Vibration: Operating: .062 DA @ 5-55 Hz; 10 g @ 55-110 Hz
Non-Operating: 10 g @ 5-500 Hz

Shock: Operating: 20 g @ 11ms
Non-Operating: 30 g @ 11ms

Weight: 23 to 35 grams (approx. 1 oz.)

THINPAK™ Miniature Relays/AZ1530 Series

Up to 4PDT Contacts — 1, 2 or 5 Amp

For PC Board Mounting — 0.6″ center-to-center
Sealed plastic dust cover on 1 and 2 pole relay.

The AZ miniature THINPAK relay has been designed for applications with either demanding space limitations, such as 0.6″ center-to-center PC card mounting, or operating requirements that cannot be met by reed relays or conventional contact type relays. The high pressure 1, 2, or 5 amp contacts enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of reed relays. The high sensitivity, long life and insulation resistance of more than 10^{10} ohms makes it an ideal unit for galvanic separation between electronic circuits.

The 1 and 2 pole relays have a plastic dust cover ultrasonically welded to the baseplate to protect the inside from flux and cleaning agents during machine soldering and spray or vapor cleaning.

Contact Rating: Noninductive load
Light Duty (1 Amp): Fine silver goldplated; 1 Amp @ 26 VDC or 0.5 Amp @ 115 VAC
Medium Duty (2 Amp): Silver Cadmium-Oxide; 2 Amp @ 26 VDC or 1 Amp @ 115 VAC
Heavy Duty (5 Amp): Silver Cadmium-Oxide; 5 Amp @ 26 VDC or 3 Amp @ 115 VAC or 2 Amp @ 220 VAC

Life Expectancy: Mechanical Operations: 10^7

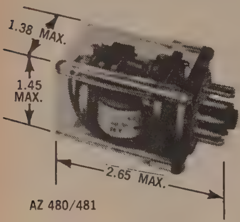
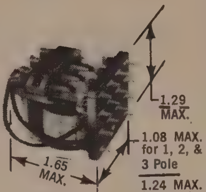
General Purpose Relays/AZ480 Series

Up to 4PDT Contacts — 10 Amp

U/L Recognized (File No. E44211)



AZ 480/481



AZ 488/487
AZ 482/483

AZ 480 relays are available in either an open or plastic enclosed version. The open relay, with either solder or PC terminals, can be mounted with an attached base plate or with a 6-32 tapped hole in the core. It also can be supplied with a 6-32 mounting stud and locating tab. The relay enclosed in a plastic dust-cover is available either as a plug-in version with octal type socket (8 or 11 pins), or with PC terminals.

Contact Rating: 10 amp @ 115 volts AC 60 Hz non inductive
Contact Material: Silver-cadmium-oxide
Contact Arrangement: 1, 2, 3 and 4 form C (up to 4PDT)
Life Expectancy: Mechanical: 10 million operations
Rated Load: ¼ million operations
Dielectric Strength: 1500 Vrms
500 Vrms across contact gap
Insulation Resistance: 100 megohms minimum
Coil Voltage: To 280 volts AC
Coil Power: Nominal — DC: 1.2 watts — AC: 2.5 VA
Max. Continuous Dissipation: 2.5 watts @ 35°C (95°F) ambient temperature

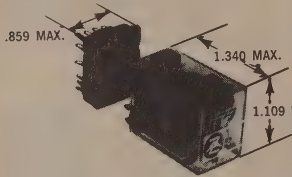
Miniature AC, DC Relays/TEC1300 Series

4PDT Contacts — 5 Amp

U/L Recognized (File No. E45020) / CSA File No. 31387

The miniature relay series 1300 with AC or DC coils and 4PDT contacts, available with either plug-in or PC terminals, is ideally suited for use in alarm systems, communications, and data processing equipment.



Contact Rating: Resistive Load 5 amp at 26 VDC or 115 VAC*

Contact Material: Silver gold plated. Other contact material available

Contact Arrangement: 4 form C (4PDT)

Life Expectancy: Mechanical Operations: 10^8

Electrical Operations: At Rated Load: 5 x 10^4
At 3 Amp 26 VDC or 115 VAC: 10^6

Dielectric Strength: 1500 Vrms; 500 Vrms across contact gap

Insulation Resistance: 1500 Megohms min. @ 20°C, 100 VDC, 50% RH

Coil Power at 20°C:
AC: 1.20 Va nom. ; 2 Va max. continuous
DC: .90 Watts nom.; 2 Watts max. continuous

Coil Temperature: Max. 105°C

Weight: Approx. 42 gr. (1.5 oz)

Terminals: Solder lug/plug-in or PC on relay
Solder lug or PC on socket

Enclosure: Clear, high impact polycarbonate cover

THINPAK™ Miniature Relays/AZ1630 Series Magnetic Latching

Up to DPDT Contacts — Dry Circuit to 2 Amp

For PC Board Mounting — 0.6″ center-to-center.
Sealed Plastic Dust Cover.

The THINPAK Series AZ 1630 magnetic latching relay, is a miniature memory relay which can be operated with an impulse of more than 10 ms and store the information indefinitely without power consumption. This makes it an ideal component for economical low-bit memory systems such as that needed for tool machines, elevators, packaging and vending machines, aircraft and car simulators, etc. The construction of the relay and selection of materials assures that the status of the relay cannot be changed by mechanical vibrations or shock, up to specified limitations. The N.O. side of the contact closes after energizing the operating coil with a DC pulse. The contact switches to the opposite position by energizing the release coil. In standard versions, both coils use the same operating voltage, which allows energizing and de-energizing the relay from the same voltage source. The high pressure 1 or 2 amp contact enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of a reed relay. The high insulation resistance of more than 10^{10} ohms and the low contact resistance of less than 50 mΩ make it ideal for galvanic separation between electronic circuits.

The relays have a plastic dust cover ultrasonically welded to the baseplate to protect the inside from flux and cleaning agents during machine soldering and spray or vapor cleaning. Cleaning by immersion is not recommended.

Contact Rating:	Noninductive load.
Light Duty:	(Fine silver goldplated.) 1 Amp @ 26 VDC or 0.5 Amp @ 115 VAC.
Medium Duty:	(Silver cadmium oxide.) 2 Amps @ 26 VDC or 1 Amp @ 115 VAC.
Dry Circuit:	(Silver hard gold overlay.) Dry circuit or low level to 0.2 Amp @ 26 VDC or AC.
Life Expectancy:	Mechanical Operations: 10^5 Operations at Rated Load: 10^6.
Contact Resistance:	50 milliohms maximum initially.
Operate Time: (Typical)	3 ms at nominal voltage.
Release Time: (Typical)	2 ms at nominal voltage.
Contact Bounce: (Typical)	At 10 mA contact current: 2 ms at operate N.O. side. 4 ms at reset N.C. side.
Capacitance: (Typical)	N.C. to movable 0.6 pF. N.O. to movable 0.9pF. Contact to coil 12 pF.
Dielectric Strength:	Contact-to-contact 500 Vrms. Contact-to-coil 500 Vrms.
Insulation Resistance:	10,000 megohms min. @ 20°C. 100 VDC, 50% RH.
Coil Temperature:	Maximum 105°C (220°F).
Ambient Temperature:	
Operating:	(at intermittent duty 20 sec. maximum on time. 100 sec. minimum off time). −5°C (23°F) to 40°C (104°F).
Storage:	−55°C (−72°F) to 105°C (220°F).
Vibration:	0.062 DA @ 10.55 Hz. 10 g @ 55-300 Hz.
Shock:	30 g.

A phase sequence relay monitors the phase sequence of three phase power being supplied to electrical equipment. The relay picks up when all input terminals are energized and phase sequence is A-B-C. Relay drops out if one or more power leads are grounded, opened or if the phase sequence is C-B-A.

ENTER LETTER FOR LENS COLOR

A unique, passive element circuit within the barrel assembly allows the indicator to illuminate only when the phase sequence of power being monitored is A-B-C. The indicator will not illuminate if the phase sequence is C-B-A, or any one or more leads are disconnected. Ideal for Airborne or Ground Equipment, the indicator will provide trouble-free instantaneous indication with no warm-up time required.

PHASE SEQUENCE TESTER

COLOR CODED CLIPS
ϕA – RED
ϕB – YELLOW
ϕC – BLUE

The phase sequence tester is used to determine the proper sequence of power lines being hooked up to equipment.

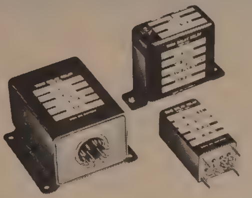
TIME DELAY RELAYS



Delayed Pull-in: On application of control power, the time delay begins. At the end of the time delay, the output relay operates.

Delayed Drop-out One Shot: Applying control power operates the output relay. At the end of the time delay period, the output relay returns to normal.

Delayed Drop-out Maintained: Closing a control switch operates the output relay; opening it starts the time delay. Any control switch closure before the end of the time period immediately recycles the timer.

Table lists Time Delay Relays with factory preset time intervals (fixed) with accuracy of ±10% with ±2% repeatability. Flange mounted with solder hook terminals, hermetically sealed. Input voltage is 18-32 VDC with 2 amp or 10 amp relay contacts DPDT.

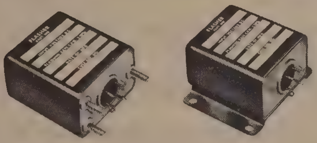
***ENTER TIME REQUIRED IN SECONDS WITHIN RANGE SPECIFIED**

The Time Delay Relays are manufactured with factory pre-set time intervals or with externally adjustable time intervals or with an internally adjustable potentiometer. Time delays to 600 seconds are also available. The units can be purchased with ±10% or ±5% accuracy with many mounting styles and terminals including connectors per MIL-C-38999.

SOLID STATE FLASHERS . . . when power is applied, a flashing signal is given



- INPUT VOLTAGE: 18 TO 32 VDC
- OPERATING TEMP: -55°C TO +71°C
- LIFE EXPECTANCY: 10,000 HRS MIN
- HERMETICALLY SEALED
- OTHER STYLES ARE AVAILABLE

PRICES ARE FOR POSITIVE SWITCHING TYPE, STUD MOUNTED.

PART NO.	PRICE 1–9	LAMP OR RELAY LOAD	FLASHING RATE ±10%	ON:OFF RATIO ±20%

RELAYS

AC & DC MAGNETIC RELAYS

ARROW-HART AC and DC Magnetic Control Relays are Pilot-Duty Devices designed to switch coil currents of contactors, starters, solenoids and other control relays. Applications include machine tool control, refrigeration control and a wide variety of other industrial and commercial uses.

Available in a number of pole configurations to 8 poles maximum and in 10 and 15 ampere ratings to 300 volts maximum, these relays will provide long life and dependable operation.

MACHINE TOOL RELAYS

TYPE MTS & MTU

Type MTS and MTU Gold Bonded Relays are available with combinations of contact configurations, normally open, normally closed, normally open and normally closed to six poles maximum and ratings up to 10 amperes 300 volts AC and 2 amperes 125 volts DC or .5 amperes 250 volts DC. Both the surface mounting type MTS, and receptacle mounting type MTU are available in two basic types:

ELECTRICALLY HELD: The relay coil is energized to operate the contacts and the current to the coil is maintained to hold the contacts in the operating position. This is the most common type of relay, and is most often used in 2 and 3 wire control circuits.

MECHANICALLY HELD: The relay coil is energized momentarily to operate the contacts which are then held in the operating position by means of a mechanical latch. A second coil is energized to trip the latch and open the relay contacts. No power is consumed while the relay is in the closed or latched position.

PLUG-IN STYLE

This relay is designed primarily for use with plug-in receptacle, but can also be used by itself as a back-wired unit for through-panel mounting, or cover mounted for front connectability. The plug-in receptacle is an exceptionally sturdy industrial-type unit of 1-piece molded construction. It is equipped with flat stab-in connections having broad contact surfaces to assure positive contacting. These are NOT ordinary pin-type connections. Back is totally enclosed, eliminating the need for additional insulation when mounting on a panel. Rubber snubbers minimize transfer of machine vibration to the relay. Terminals for screw-type connections are clearly marked for easy identification. Heavy retaining prongs hold the relay securely to the receptacle. If desired (in applications involving exceptionally heavy vibrations), the relay can be locked to the receptacle.

SURFACE MOUNTED STYLE

Electrically identical to the plug-in model, this surface mounting relay is front wired and is equipped with quick-connect terminals. Rubber snubbers on the base (similar to those on the plug-in receptacle) assure firm mounting and reduce transmission of machine vibration to the relay.

PAY-STACK MOUNTING

Two or more Gold Bonded Relays can be stacked one on top of the other — bottom-to-top or top-to-bottom as desired — providing the maximum number of control circuits in the smallest possible envelope. A few of the many possible stacking arrangements are shown here. This is utilized by a thru-rod arrangement. The necessary parts are available in a pay-stacking hardware kit consisting of 2 bushings, 2 screws, 2 nuts, and 2 lockwashers. See Field Modifications.

SPECIFICATIONS

RELAY DESIGN: Class A coils, vacuum impregnated on mylar bobbin. Low mass, clapper-type electromagnets, laminated core with shaded pole. Fully enclosed, multi-pole circuits with direct terminal contact, terminals epoxy anchored. Flexible contacting blades with single break Gold Bonded silver base contact buttons. Guided nylon blade operator. Full vision casing with circuit diagram identification label.

CONTACTING CONFIGURATIONS: Two forms of circuiting with 4 and 6 movable blade types.
4 blade — 4 Type C (N.O.-N.C.)
6 blade — 2 Type C (N.O.-N.C.), 4 Type A (N.O.)
Special contact configuration data may be obtained from factory.

RELAY MOUNTING CONFIGURATIONS: **Surface mounting type** with side projecting spade terminals available in either of the two contacting forms. **Panel mounting type** with rear extending spade terminals, or **cover mounted** with front extending spade terminals.

MOUNTING POSITIONS: Unlimited.

CONTACT BOUNCE: Negligible. Bounce was measured by using a 3 volt DC source on an oscilloscope.

CONTACT RESISTANCE: 10 Milliohms or less. Resistance was determined by using a 110V, 60 cycle 10 amp supply and reading the millivolt drop on an oscilloscope.

PICK UP AND DROP OUT TIME: **Pick up** — 20 milliseconds or less. **Drop out** — 12 milliseconds or less.

HEAT RISE: 30°C maximum contact temperature rise with full load and coil at rated volts.

OPERATING LIFE: In excess of 10 million cycles. Normal testing — 4 cps., in gravity drop out position.

COIL DATA (Nominal Values):
Watts: Inrush — 7 watts. Sealed — 3.5 watts.
Volt Amps: Inrush — 15 V.A. Sealed — 5.5 V.A.
Class A coils — 50°C rise at rated voltage at 40°C.
Pick up is 85% of rated volts or less.
Drop out is 75% of rated volts or less.
Operating range is +150°F to −65°F.

RELAY RATINGS: 10 amp. 300VAC maximum.

Horsepower and Ampere Ratings:

HP	Volts	Amps Per Pole	Two In Series
½	110 AC	10	
½	220 AC	10	
Max. Interrupting rating	125 DC	.5	2.0
	250 DC	.25	.5

HOW TO ORDER

1. Specify CATALOG NUMBER of relay required from the appropriate selection table below.
2. Specify COIL CODE for the required control circuit voltage and frequency from the Coil Selection Table below.
3. Order and price by complete Catalog Number.
4. Specify Catalog Number of RECEPTACLE ONLY required for receptacle mounting units. Order and price by individual Catalog Number.
5. Order FIELD MODIFICATIONS required by selecting applicable Catalog Number of field modification kit from tables below.

EXAMPLE:

Receptacle Mounting Relay Catalog Number	+	Code Coil	=	Complete Receptacle Mounting Relay Catalog Number	Receptacle Only Required For Mounting
MTU-402		20		MTU-402-20 $36.40	MTRS-402 $5.60

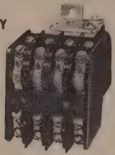
Arrow Hart RELAYS

CONTROL CIRCUIT RELAYS

DC RELAY



AC RELAY

TYPE FPR & FPRL

Type FPR and FPRL Relays are available with combinations of contact configurations, normally open or normally closed to eight poles maximum and ratings up to 15 amperes 300 volts AC and 10 amperes 125 volts DC or 5 amperes 250 volts DC.

Type FPR Relays are designed for switching control circuit loads where hi-cycling and long life are required. The contacts are designed for power circuits up to 15 amperes.

Type FPRL Relays are of the same basic construction as the FPR Relays, except that the contacts are designed for "Low-Energy" circuits up to 10 amperes.

Contacts are vertically mounted and operate directly from the movable armature which is free-floating via silicone rubber coupling for self-alignment and vibration control. Double break contacts are silver alloy and coils are of molded construction. Line and load wiring is straight through and accessible from the front. Standard relays can be mounted in any position on the vertical plane. Relay coils will pick up at 85% of rated voltage or less. Relays are available with up to 8 poles maximum. These can be furnished with up to 8 poles normally open, or in combination with up to 4 poles maximum normally closed. Either power or low-energy contacts are available.

In AC models **FPR** and **FPRL Model N**, the AC magnets are laminated. In DC models **FPR-DC** and **FPRL-DC Model N**, the DC magnets are plunger type for noiseless operation.

SPECIFICATIONS

CONTACT RATINGS (Per Pole)

AC Ratings (Type FPR): 15A, 20V min., 250V max. 90A locked rotor at 240V.

AC Ratings (resistive) for Low Energy Applications (Type FPRL): Max. amps — 10. Max. volts — 250. Min. V.A. — 0.01. Max. V.A. — 150.

DC Ratings (Non-Inductive) (Type FPR): 1A, 250V — 5A, 125V — 15A, 32V. **2 Poles In Series:** 5A, 250V — 10A, 125V.

DC Ratings (Resistive) for Low Energy Applications (Type FPRL): Max. amps — 10. Max. volts — 250. Min. V.A. — 0.01. Max. V.A. — 150.

CONTACT RESISTANCE

Type FPR: 0.10 ohms at 1A, 10V.

Type FPRL: 0.02 ohms at 1A, 25V.

Note: Silver cadmium oxide contact buttons not recommended for services below 10V.

TERMINAL CAPACITIES

Tvpe FPR and FPRL: #14 wire, 6-32 screw.

COILS

Class A molded coils are standard. All coils are designed to operate from 85% (80% for DC relays) or less of lower value through 110% of higher value. Temperature rises safe up to 55°C ambient.

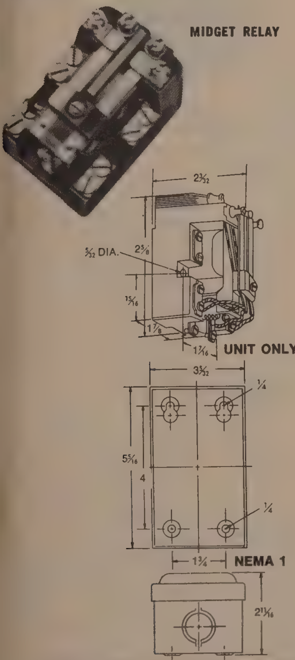
MIDGET RELAYS



APPROXIMATE DIMENSIONS, NOT SUITABLE FOR CONSTRUCTION

TYPE "MR" RELAYS are midget types designed specifically for 2-wire control systems. They provide efficient control of single-phase fractional horsepower motors, and other light loads including pilot lights, signalling devices, and a variety of circuit control duties.

Available as open and closed types, they are principally used to control 2-wire circuits. The enclosed type, housed in a compact metal enclosure, is designed for installation where space is limited. Mounting and contact screws are in full view, and readily accessible. Type "MR" relays are available with either one or two poles, single or double throw construction, for both AC and DC use. Three- and four-pole types are available for AC use only, and offer a variety of normal contact positions to meet specific requirements. Double throw contacts not suitable for opposite polarity. On three- and four-pole relays, contacts located one above the other must not be used on opposite polarity.

ARROW-HART magnetic relays are built for mounting in limited space, and offer low wattage consumption and high power factor.

The clapper type magnet is equipped with a continuous duty shading coil that reduces magnetic hum.

Removable silver-to-silver contact tips are easy to install, and inexpensively maintained. Small moving tips abut against large, flat-faced stationary tips, insuring proper contact. Make and break contact is instantaneous.

Control relays are available in open types for surface or panelboard mounting, and enclosed types with metal housing, General Purpose NEMA 1 Enclosures.

HORSEPOWER AND AMPERE RATINGS

HP Single Phase	Volts	Amps Per Pole	Two In Series
½	110 AC	10	10
½	220 AC	10	10

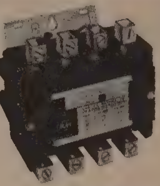
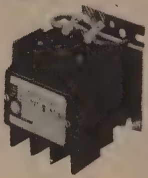
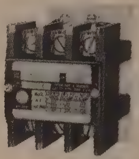
ARROW HART CONTACTORS DEFINITE PURPOSE CONTROLS

Designed for the control of compressors and resistive heating elements the ARROW-HART type ACC line of contactors offers the user flexibility, improved performance and dependability with reduced maintenance in a host of applications. Now available in 25, 30, 40, 50, 60, 75, 90, and 120 ampere sizes this comprehensive line will meet a very wide range of the industry's exacting needs. All of the ARROW-HART type ACC contactors are available in general purpose type enclosures, and with factory additions to meet a variety of application requirements. In addition, ARROW-HART makes available to the user the broadest line of field modification kits in the industry.







FEATURES

1. Complete line, from 25 through 120 Amps with 4 specific frame sizes, assures the user of maximum economy within design limits of quality.
2. Ratings and performance characteristics equal or better than requirements established by any compressor or air conditioning manufacturer.
3. 6:5:4 lock rotor ratings with standard inductive and full load ampere ratings equal or higher than any major competitor.
4. Complete interchangeability with all previous ARROW-HART designs and all major competitors.
5. Straight thru wiring — saves installation time and labor.
6. Compact design saves valuable panel space.
7. Contacts accessible from the front for rapid inspection and replacement.
8. Complete line of optional accessories to provide maximum flexibility.
9. Positive contact alignment and vertical position to prevent accumulation of breakdown material.

CONSTRUCTION TYPE ACC

ARROW-HART Type ACC Contactors are available in 4 basic frame sizes with ratings from 25 through 120 Amps. Construction features include silver cadmium oxide contacts, firmly anchored and generous terminals, wide range dual hertz coils, no-kiss operation. These features assure dependable performance even under the most adverse operating conditions. In addition, the range of ampere sizes combined with a complete line of field and factory modifications offers great selection flexibility to the designer and assurance of availability to the user.

UNIQUE HIGH SPEED SPDT REED RELAY

Low operate power, high speed (up to 500Hz operation), latching and non-latching versions, bifurcated contact and extremely long life (>10^9 mechanical operations) are but a few of the features of this unique relay. Permanent magnet bias provides high contact pressure. Available in both power type (1A 20W DC) or dry circuit type (current as low as 100μA). Simultaneous molding techniques firmly anchor all terminals and parts of this relay into a rigid block. This means no parts can loosen even after long use. High contact pressure—min. of 5g gives vibration/shock resistance of 10/100G. Breakdown voltage is a min. of 500VDC. Ambient temperature range is −55 to +65°C. All models are available with or without magnetic shielding.

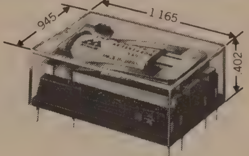
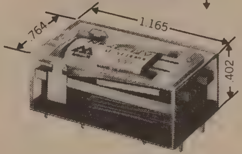
NEW FLATPACK WITH HIGH SENSITIVITY AND RELIABILITY

- Low profile—Stands 10.2mm (.402 inches) off P/C Board
  Ideal for High density packaging
- Available in 2 and 4 Form C contact arrangements
- Long Life—2PDT/3 x 10^8, 4PDT/10^8 mechanical operations
- High sensitivity and reliability insured by uniquely designed magnet and armature assembly
- UL component recognition File No. E43149
- VDE approval VDE—Reg.—Nr. 4811.2010
- Available in hermetically-sealed version (NFE) back-filled with dry nitrogen

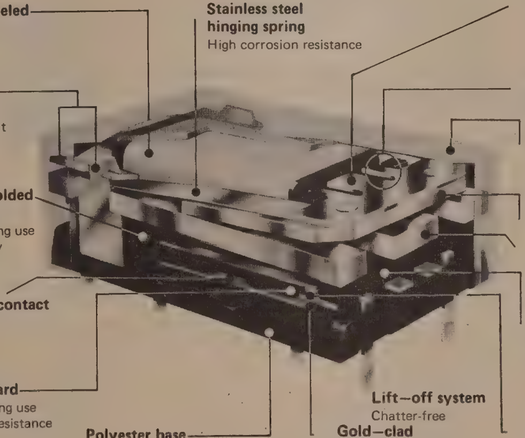


NF4 (4PDT)



NF2 (DPDT)

Patented or pending in 10 countries



Polyurethane enameled copper wire coil
High heat resistance

Stainless steel holding spring
Screwless design won't loosen after long use

Simultaneously molded spring block
No looseness after long use
High thermal stability

Independent twin contact
High reliability

Plastic actuating card
No looseness after long use
High heat and wear resistance
Good insulation

Polyester base
High heat and insulation resistance
Large mechanical strength

Stainless steel hinging spring
High corrosion resistance

Lift—off system
Chatter-free

Gold—clad moving contact
Low contact resistance
High corrosion resistance

Shock absorber
Shock absorbing when the armature touches the yoke
Negligible chattering

Rebound absorbing clearance
Negligible chattering

Clear polycarbonate dust cover
High heat and shock resistance

Armature

Yoke
Flat type magnetic structure,
Large attractive force,
Higher magnetic efficiency

Simultaneously molded stationary contact block
High stability after long use
Good insulation

Gold—clad stationary contact
Stabilized contact resistance for long life

HIGH-RELIABILITY HIGH-PERFORMANCE SERIES K-RELAY

These high sensitive K relays are applicable to many applications, and have a versatile range. There are AC types, 4 amp types for larger loads, plastic sealed types for use in the adverse ambient conditions and MBB (Make Before Break) Contact types in addition to the standard 2 amp relays for DC applications. Typical uses are as follows.

General electronic equipment, Measuring devices, Alarm equipment, Remote control devices, Office machines, Communication equipment, Computers, Sequence control circuits for general industrial machinery, etc.

- **High-Reliability and Composition**

The Series-K relay consists of a patented lift-off type contact spring assembly and a unique magnetic unit with superior attraction characteristics. To make reliability high, production easy, and adjustment unnecessary, this relay is built up by applying a precision-parts simultaneous-molding method and a heat riveting system and also by using standardized parts and a screwless mechanism.

FEATURES

- **Patented Magnetic System**
- **Screwless Design**
- **Chatter Free Lift Off System**
- **High Stability Against Vibration**
- **Stabilized Contact Pressure**
- **Simultaneously Molded Spring Block**
- **Polyurethane Enameled Copper Magnet Wire**
- **Glass Fibre Reinforced 66 Nylon Card And Coil Bobbin**
- **Unique Independent Twin Contact Design For High Reliability**

- **Interchangeable with existing cradle relays**
- **100 times more reliable with simplified design**
- **Extra long life—Mechanical: more than 10^8, Electrical (1A 30W): more than 10^7 operations**
- **Patented high-sensitive magnetic system—Patented or pending in 6 countries**
- **Versatile range for all applications—Plug-in/Solder & P/C terminal, Single & Bifurcated contact, 2, 4 & 6C, 2, 3 & 5 amp., DC & AC, Plastic sealed type**
- **UL recognition File No. E43149, CSA approval File No. LR26550**

■ CHARACTERISTICS (at 20°C, 50% R.H; sea level)

Max. operating frequency	50Hz
Operate time (*)	Approx. 15m sec.
Release time (*)	Approx. 5m sec.
Bounce time (at nominal voltage)	
Single contact	Approx. 3m sec.
Bifurcated contacts	Approx. 1m sec.
Breakdown voltage	
Between open contacts, contact sets	750Vrms
Between live parts and ground	750Vrms
Between contacts and coils	750Vrms
Initial insulation resistance	1,000MΩ at 500VDC
Ambient temperature (**)	
K2, K4 series except K2E, K4E series	−40 to +80°C

LARGE CAPACITY SMALL SIZE

Small in size but large in capacity—1.2 cubic inches. Available with bifurcated contacts in the four pole version for use at low levels (HC4-D). Hermetically sealed version meets leak rate of mil std. 883 at 85°C (add suffix E to type number). Sockets for soldering, for p/c board and screw terminal type are available, all supplied with hold down clips. Printed circuit option identified by P suffix.

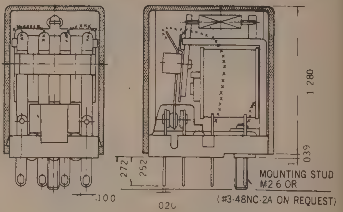
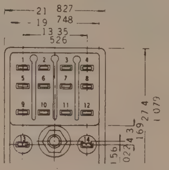
FEATURES

- Glass fiber reinforced 66 nylon coil bobbin.
- Stainless steel release spring.
- Clear polycarbonate dust cover.
- Contact springs molded into one block.
- Beryllium copper contact springs.
- Gold flashed AgCdO contacts with special surface treatment.
- Arc barrier type available in 3PDT, 4PDT.
- Terminals and base molded into one block.
- Debris well between contacts.

- **Extra long life—more than 10^8 mechanical operations**
- **4 types of contact arrangement—4PDT (for 5A 250VAC), 3PDT (for 7A 250VAC), DPDT (for 7A 250VAC), SPDT (for 10A 250VAC)**
- **Applicable to loads from low to high level**
- **UL component recognition File No. E43028, CSA approval File No. LR26550, VDE Reg.-Nr. 4811.209 (2011)**





CHARACTERISTICS

Breakdown voltage	
Between open contacts	700 Vrms
Between live parts and ground	1,500 Vrms
Insulation resistance (at 500V DC)	1,000 MΩ
Pull-in/Drop-out time (approx.)	DC: 13/10 msec. AC: 13/16 msec.
Temperature range	−50∼+50°C−58∼+122°F
Shock/Vibration resistance	10/5 G at 55Hz
Weight (approx.)	34g 1.2oz

Life curve (AC 250V Resistive load)

Life curve (AC 250V Resistive load)

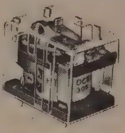
ECONOMICAL SUBMINIATURE RELAY WITH HIGH RELIABILITY

Economical subminiature relay with high reliability. UL/CSA rating (resistive load) 2A/125VAC, 2A/30VDC, VDE rating 2A/65VAC, 2A/30VDC. Contact material gold flashed silver. Breakdown voltage min. 750 Vrms across contacts. Operate power 800 mW nominal. Maximum pull-in voltage 75% of nom. Min. drop-out voltage 10% of nom.



- Low and stable contact resistance.
- Small size.
- UL File No. E43149.
- CSA File No. LR26550.
- VDE-Reg.-Nr. 4811.2010
- When ordering UL, CSA and VDE types, please add the suffix to the type.

DL SERIES
1 AMP/24 VOLTS DC

NO BOUNCE, NON-POSITION SENSITIVE

Extreme long life and reliability characterize this bounce-free relay. The breakdown voltage between open contacts is 500VDC. Pull-in/drop-out time 2/2 ms max. Shock resistance >50G for 11 ms. Vibration resistance >30G at 10 to 300 Hz, >5G at 300 to 600 Hz, >30G at 600 to 6000 Hz. Fits in standard DIP socket.

- No bounce, no chatter: Mercury film contacts
- Non-position sensitive mounting
- Switching range: 1 A 24 VDC; 0.2 A, 110 VAC; 10 μA, 100 mVDC
- Extremely long life
- Welded internal construction
- Constant contact resistance over life
- DIP terminal arrangement
- Magnetically shielded
- Hermetically sealed

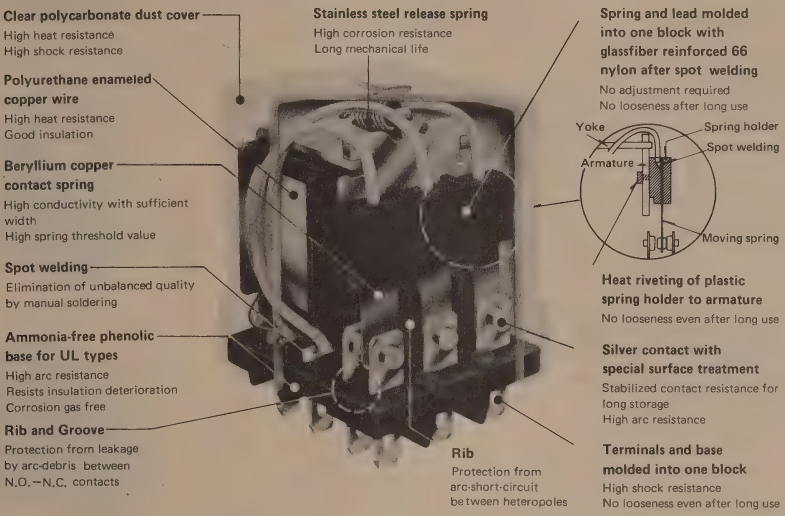
HP SERIES
10 AMP/250 VOLT

HIGHLY RELIABLE, 10 AMP POWER RELAYS

- Simplified construction through permanent bonding of contact springs and terminals in plastic.
- Versatile mounting through choice of plug-in, solder, or Q.C. terminals.
- High quality is insured through mass production employing simultaneous molding, heat riveting and spot welding.
- Wide variety of sockets are available.

- DIMENSIONS
  HP1, 2, 3: 1.49" L x 1.42" W x 1.89" H
  HP4: 1.97" x 1.42" W x 1.73" H



Clear polycarbonate dust cover
High heat resistance
High shock resistance
Polyurethane enameled copper wire
High heat resistance
Good insulation
Beryllium copper contact spring
High conductivity with sufficient width
High spring threshold value
Spot welding
Elimination of unbalanced quality by manual soldering
Ammonia-free phenolic base for UL types
High arc resistance
Resists insulation deterioration
Corrosion gas free
Rib and Groove
Protection from leakage by arc-debris between N.O.–N.C. contacts
Stainless steel release spring
High corrosion resistance
Long mechanical life
Spring and lead molded into one block with glassfiber reinforced 66 nylon after spot welding
No adjustment required
No looseness after long use
Yoke
Spring holder
Spot welding
Armature
Moving spring
Heat riveting of plastic spring holder to armature
No looseness even after long use
Silver contact with special surface treatment
Stabilized contact resistance for long storage
High arc resistance
Terminals and base molded into one block
High shock resistance
No looseness even after long use
Rib
Protection from arc-short-circuit between heteropoles

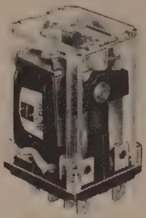
SUPER COMPACT, LARGE CAPACITY RELAYS

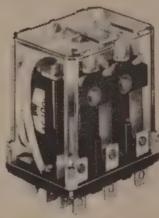
This incredible super compact relay series has a mechanical life of 1x10^7 for the AC type and 1x10^6 for the DC type. It can be operated at 20 operations per minute at maximum rating and has >10G shock resistance (except contact moving direction). Screw terminal sockets for front wiring, solder terminal sockets and brackets for direct mounting are available. Hold down clips are supplied with each socket.



H G 2 (DPDP)

FEATURES

- Clear polycarbonate dust cover
- Polyurethane enameled copper wire
- Ribbed groove—Protection from leakage by arc-debris between N.O.-N.C. contacts
- Phenolic resin for UL (CSA) types Polyester resin base for ordinary types
- Stainless steel release spring
- Silicon steel layer core
- Silver-cadmium-oxide contact
- Terminals and base molded into one block
- Arc-barrier
- Simultaneously molded spring block



H G 3 (3PDT)

- **Large capacity up to 20A 250VAC resistive 1.5KW 3 phase 220VAC motor**
- **Available with plug-in, soldering and Q.C. terminals**
- **Contact form 2C, 3C, 4C**
- **UL component recognition File No. E43028**
- **CSA approval File No. LR26550**

HEAVY DUTY, LONG LIFE, TROUBLE FREE

Lever action mechanism provides heavy duty switching for motor loads. Expected life at max. rating is 300,000 operations. Dielectric strength is 2500VAC for one minute. Easy mounting is provided through a snap-in bracket. Relay may be installed in any position. Screw type terminals and Q.C. terminals are available. Note, max. current for normally closed auxiliary contact is 3A.

HGJM

Clare HGJM relays have established new industry standards for quiet, fast and stable operation. HGJM Series SPDT relays have the 100VA load and multi-billion operation reliability characteristic of our HGSM and are recommended for all new applications.

Response times approach 1ms speeds, noise levels are less than 5µV at 5ms after coil energization (10kHz bandwidth) and the relays are ultra-stable to 250Hz. The 1 Form C contact will switch µV, nanoampere loads to 2A or 500V loads (100VA max, ac or dc). The relays are offered in 0.400″ height high sensitivity models and 0.350″ height low profile versions. Both mount on staggered 0.100″ PCB grid patterns. The low profile models permit 0.5″ board centers.

HGJ2MT

Clare HGJ2MT relays feature the same outstanding electrical characteristics as the HGJM relays in a DPDT (2 Form C) package. High sensitivity HGJ2MT relays have common open time durations to 50µs at 100Hz for capacitor transfer technique applications. Electrostatic shielding is standard on all models.

HGQM

Clare HGQM relays for PCB mounting have the fastest response times in the industry for mercury-wetted relays. The contact form is a SPDT transfer-contact configuration. Typical response times range from 0.8 to 1.0ms and noise levels are under 5µV within 1.5ms after coil energization (1000Hz bandwidth). HGQM relays are ultra-stable at switching speeds to 500Hz (bistable) and 400Hz (single-side-stable). Switching capabilities range from signal levels to 1A or 500V loads (50VA max).

The HGQM package is only 0.580″ high and mounts on convenient staggered 0.100″ grid patterns. An ideal companion for HGJM relays in many applications requiring low level sensor-based analog signal switching or process control for data logging/acquisition.

HGQ2MT

The HGQ2MT relays feature the same electrical characteristics as the HGQM relay with transfer contact switching but in a DPDT package. This ultra-high speed two pole relay is ideal for low level switching applications.

Contact noise is less than 10µV within 2ms after coil energization — three times faster than the industry standard. Thermal emf levels are 15µV maximum.

SPECIFICATIONS — HGJM & HGJ2MT

CONTACT RATING (Resistive Load): Power — 100VA, max. Voltage — 500V, dc or ac, max. Current — 2A switched, max., 5A carry only, max.

CONTACT RESISTANCE (ON impedance): 15 to 25 milliohms, ±2.0 millioms

LIFE EXPECTANCY: Greater than 10 x 10⁹ operations at rated load

OPERATE TIME: 1.25ms response time — Switching up to 250Hz (4.0ms period)

BREAKDOWN VOLTAGE: 1,000V rms 60Hz min. between all mutually insulated terminals, except between windings of double wound coils, 200Vdc

INSULATION RESISTANCE (OFF impedance): HGJM Series, Standard Value 100 megohms. Available, 100,000 megohms — HGJ2MT Series, Standard Value, 10,000 megohms. Available 100,000 megohms (Measured across open contacts at 25°C, 40% relative humidity)

ENVIRONMENTAL: Vibration — 10 to 500Hz 0.06″ d.a. or 5g's. Shock — 30g, 11 ±1ms, ½ sinewave (no mechanical damage, non-operating test). Temperature — −38.8°C to +105°C (operating)

SPECIFICATIONS — HGQM & HGQ2MT

CONTACT RATING (Resistive Load): Power — 50VA, max. Voltage — 250V, dc or ac, max. Current — 1A switched, max. 5A carry only, max.

CONTACT RESISTANCE (ON impedance): Initial — 15 to 25 milliohms, ±2.0 milliohms

LIFE EXPECTANCY: Greater than 2 x 10⁹ operations at rated load

OPERATE TIME: 1000µs. Switching up to 500Hz (2.0ms period) bistable and to 400Hz single-side-stable

BREAKDOWN VOLTAGE: 1,000V rms 60Hz min. between all mutually insulated terminals, except between windings of double wound coils, 200Vdc

INSULATION RESISTANCE (OFF impedance): HGQM Series — Standard Value, 100 megohms. Available 100,000 megohms — HGQ2MT Series, Standard Value, 10,000 megohms. Available 100,000 megohms (Measured across open contacts at 25°C, 40% relative humidity)

ENVIRONMENTAL: Vibration — 10 to 500Hz 0.06″ d.a. or 5g's. Shock — 30g, 11 ±1ms, ½ sinewave (non-operating). Temperature — −38.8°C to +105°C (operating)

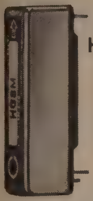
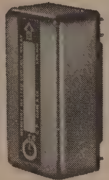
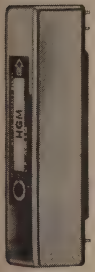
MERCURY-WETTED CONTACT RELAYS



HGSM



HGS2MT



HGM

HG2M

HGSM

Clare HGSM relays are PCB mount models with 2A or 500V (100VA max.) switching capabilities. The HGSM series SPDT relay is recommended for replacement applications only. New applications should specify the faster HGJM series with the same load switching capabilities, life expectancy and lower noise. The HGSM package is ⅝″ high and mounts on staggered 0.100″ grid patterns.

HGS2MT

Clare HGS2MT relays have the same ratings and life expectancy as the HGSM series in a DPDT model. The HGS2MT relay is also recommended for replacement purposes only. HGJ2MT relays are recommended for all new applications requiring 100VA (per pole) switching capabilities in DPDT configurations.

HGM

HGM relays are Clare standard HG switch capsules in module form, are provided with plated steel covers for excellent mechanical protection and magnetic shielding. The standard HG switch in the HGM is not polarity sensitive. Contacts are SPDT make-before-break rated at 5 amps, 500 Volts, 250VA maximum. Life expectancy is 22 x 10⁹ at specified ratings.

HG2M

HG2M has the same characteristics as the HGM but contains 2 capsules to give you double-pole, double-throw configuration make-before-break. This results in saving space and cost over single element units. Contacts are rated at 5 amps 500 Volts, 100VA maximum with life expectancy of 22 x 10⁹.

SPECIFICATIONS — HGSM, HGS2MT, HGM, HG2M

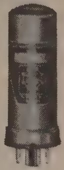
MERCURY-WETTED CONTACT RELAYS

HG

HG2A
HG3A

HG4A

HGS



HGP

HG, HG2A, HG3A, HG4A

HG relays have SPDT make-before-break form D contacts rated at 5 amps, 500 volts, 250VA max. Operating time can be as short as 2 milliseconds. The Series HG2 relay utilizes two switch capsules to furnish DPDT operating time can be as short as 2¼ milliseconds. Series HG3 relay utilizes three capsules providing 3 PDT, operating time can be as short as 2½ milliseconds. Series HG4 relay utilizes four capsules providing 4 PDT, operating time can be as short as 3¾ milliseconds. Life expectancy is 22 x 10^9 at specified ratings. Resistance, ±10% tolerance at 25 degrees C. Typical applications include computers, data logging and low-level dry circuits.

HGS

HGS Mercury-wetted relay offer increased speed and reliability along with high sensitivity. HGS 1000 Series provide SPDT make-before-break and HGS 5000 Series provides SPDT break-before-make. Both are rated at 2 amps, 500 Volts, 100VA max. Operate time as fast as 1 millisecond. Standard design available only in single element assemblies, they come in the following, single-side-stable, bi-stable and chopper. Life expectancy is 22 x 10^9 at specified ratings.

HGP

HGP is similar to the HG series except for the inclusion of permanent magnets making a slight increase in height. Magnets provide increased sensitivity. Contacts are SPDT make-before-break rated at 5 amps, 500 Volts, 250VA maximum with operate time as short as 2 milliseconds. Life expectancy is 22 x 10^9 at specified rating.

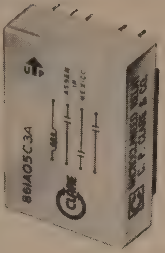
MERCURY-WETTED REED RELAYS

861 SERIES



861A05C3A
CLARE

Clare 861 series Mercury-Wetted Microclareed relays are superior when compared to dry reed relays of the same size. The relay has a reliable reed capsule with a no-bounce mercury-wetted armature. You obtain some of the mercury-wetted contact relay advantages at a slight price premium over dry reed relays.

SPECIFICATIONS

CONTACT RATING (Resistive load): Power 35VA, max. Voltage 500Vdc, max. Current .75A, max.

CONTACT RESISTANCE (ON impedance): 50 milliohms, max. initial, total circuit

INSULATION RESISTANCE (OFF impedance): 1000 x 10⁶ ohms min. at 100Vdv, +25°C, 50% rel. hum.

DRAIN TIME: 30 seconds, max.

BREAKDOWN VOLTAGE: 2000Vac, rms, 60 Hz min. across open contacts, 500Vdc all other points

OPERATING TIME: 3 ms, max. (No bounce on closure)

RELEASE TIME: 3 ms, max. with nominal clamping

TEMPERATURE RANGE (Operating): −38.8°C to +50°C

LIFE EXPECTANCY: 20 x 10⁶ operations at rated load with proper contact protection.

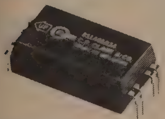
NEW 851 SERIES



Clare's 851 relay series represents new design dimensions and offers freedom in the solution of switching problems. They provide billion operation bounce-free mercury-wetted switching performance, load handling capability from signal-level to 50 VA, multipole flexibility, epoxy molded construction, and a cost approaching dry reed relays. 851 series relays are designed for printed circuit board mounting.

SPECIFICATIONS

CONTACT RATING (Resistive load with proper contact protection):
- Power — 50 volt-amperes, max.
- Voltage — 350 Vdc or peak ac max.
- Current — 1 ampere, max., switched
  3 amperes, max., carry only

CONTACT RESISTANCE (On impedance): 40 milliohms maximum, ±2 milliohms throughout life

INSULATION RESISTANCE (Off impedance): 500 megohms over open contacts, 10,000 megohms between coil and contacts at 100 Vdc, +25°C, 20-50% relative humidity

DRAIN TIME: 30 seconds after reaching upright vertical position plus at least one no-load operation to clear the contacts.

BREAKDOWN VOLTAGE: 1500 Vac, rms 50/60 Hz or 2000 Vdc across open contacts, 1000 Vac, rms, 50/60 Hz or 1400 Vdc between all mutually insulated terminals

OPERATING TIME: 3 milliseconds, maximum (No bounce on closure).

RELEASE TIME: 3 milliseconds, maximum with nominal clamping

ENVIRONMENTAL:
- Vibration — 10-500 Hz, 0.06″ double amplitude or 10 g's (non-operating)
- Shock: 30 g's, 11 ±1 ms, ½ sinewave (non-operating)
- Temperature — −40° to +65°C (operating)

LIFE EXPECTANCY (With proper contact protection): 1 x 10⁹ operations at max. contact rating

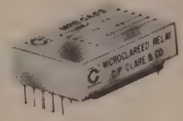
DRY REED RELAYS

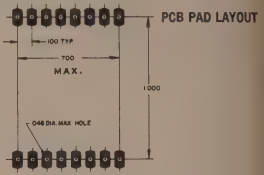
MRB SERIES MICROCLAREED®



Clare's MRB Microreed relays offer versatile signal level to 10VA switching capabilities, total input/output isolation, 800 microsecond typical switching speeds in the miniature sized relay family.

The MRB relays operate with coil power requirements as low as 10 milliwatts. The ultra-reliable operation will exceed 100 x 10⁶ operations at signal level loads or 10 x 10⁶ operations at the rated load.

Optional MRB relays are available in 3 or 5 Form A, 2 Form B, 3 or 4 Form C, 1A latching or 2A latching and 2A2B contact forms. UL recognized versions in all but Form C are available as listed in UL File E43775. The relays have molded epoxy bases with stamped metal covers and convenient 1.000″ x 0.100″ grid mounting centers for printed circuit board mounting. This low profile package will mount on 0.5″ PCB centers. Electrostatic shielding is available. 1.000″ x 0.150″ grid mounting models are available in 1 to 5 Form A versions. Consult the factory for details.



SPECIFICATIONS — MRB

CONTACT RATING (Resistive Load): Power: 10 volt-amperes, max. Voltage: 200 Volts dc or peak a.c. max. Current: 0.75 amperes, switched, max. 2.0 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): Initial: 200 milliohms max., measured at 10mA, 1000Hz

LIFE EXPECTANCY: 100 x 10⁶ operations at signal levels. 10 x 10⁶ operations at full rated load

TYPICAL OPERATE TIME: Less than 800µs including bounce

BREAKDOWN VOLTAGE: 250Vac, rms, 60Hz across open contacts or 350Vdc max.

INSULATION RESISTANCE (OFF Impedance): 10¹⁰ ohms min. at 100Vdc +25°C, 40% rel. hum.

ENVIRONMENTAL (Operating): Vibration: 0.06″ d.a. or 10g's, 10 - 2000Hz. Shock: 20g's, 11 ±1ms, ½ sinewave. Temperature: −40° to +85°C.

DRY REED RELAYS

951 SERIES

The Clare 951 series dry reed relays offer signal level to 10 VA switching capabilities, standard contact arrangements of 1, 2 and 4 Form A configurations, total input/output isolation, and rugged epoxy molded construction. Clare manufactured capsules and their demonstrated switching reliability provide 100 million operations at signal-level loads or 5 million operations at rated loads.

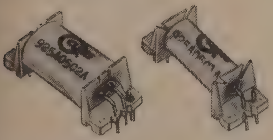
925 SERIES



Clare's new 925 series dry reed relays utilize an economical open type construction and the reliable Microclareed® miniature dry reed switch which gives up to 10 million operations at rated load. The relay frame is formed in a single molded piece for greater strength and rigidity. The relays are available in 1 Form A, 2 Form A and 1 Form B contact arrangements with 5/6, 12, or 24 Vdc coils.

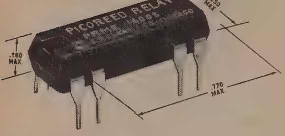
DRY REED RELAYS

PRME SERIES PICOREED®



PICOREED RELAY
PRME 1A005
.250 MAX.
.180 MAX.
.770 MAX.

Clare's new dual-in-line package PRME Picoreed relay represents a significant addition to the microminiature Picoreed relay family packaging. The relays feature 600 microsecond typical response times, signal level to 10VA switching capabilities, total input/output isolation, epoxy molded construction and an IC compatible TO-116 DIP package. Traditional Clare reliability gives 100 x 10^6 operations at signal level loads or 5 x 10^6 operations at the rated load.

The PRME one Form A switching arrangement is compatible with most DTL/TTL drive IC's. The coil draws only 13 milliamperes from standard 5 volt logic supplies. Low contact noise and low thermal emf characteristics make the PRME ideal for electronic process control equipment and low level switching applications.

The 0.180″ height optimizes the industry trend toward high density packaging by allowing PRME mounting on 0.375″ PCB centers compatible with IC components. The PRME adapts to either automatic insertion equipment techniques for direct PCB mounting on 0.30″ x 0.100″ grid patterns or to mounting in standard 14 pin DIP sockets.

SPECIFICATIONS — PRME

CONTACT RATING (Resistive Load): Power: 10 volt-amperes, max. Voltage: 100 volts dc or peak ac, max. current .5 ampere max, switched. 1.5 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): Initial: 200 milliohms max., measured at 10mA, 1000Hz

LIFE EXPECTANCY: 100 x 10^6 operations at signal levels. 5 x 10^6 operations at full rated load

TYPICAL OPERATE TIME: As low as 600 μs including bounce

BREAKDOWN VOLTAGE: 200Vac, rms, 60Hz across open contacts or 275Vdc, max.

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. at 100Vdc +25°C, 40% rel. hum.

ENVIRONMENTAL (Operating): Vibration: 0.125″ d.a. or 20g's 10-5000Hz. Shock: 100g's, 8 ±1ms, ½ sinewave. Temperature: −40° to +85°C.

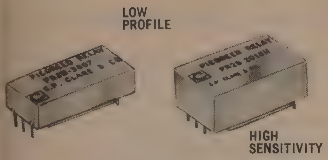
DRY REED RELAYS

PRB & PRBH SERIES PICOREED®



Clare's micro-miniature PRB and PRBH series Picoreed relays offer signal level to 10VA switching characteristics, power requirements ranging from 48 to 500 milliwatts (dependent on relay configuration) and operate times typically less than 500 microseconds in economical space saving packages. The low profile PRB series permits 0.375″ PCB mounting centers and the high sensitivity PRBH series will mount on 0.5″ PCB centers.

The 5 volt PRB/PRBH relays are fully compatible with the standard 5 volt DTL/TTL logic families and will solve many interface application problems.

Both series have molded epoxy bases with stamped metal covers and mount on 0.70″ x 0.100″ grid patterns. The PRB low profile models are also available in 6 Form A, 1B, 1A1B and 1A latching contact configurations. Electrostatic shielding is available.

SPECIFICATIONS — PRB & PRBH

CONTACT RATING (Resistive Load): Power: 10 volt-amperes, max. Voltage: 100 volts dc or peak ac, max. Current: .5 ampere, switched, max. 2 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): Initial: 200 milliohms max., measured at 10mA, 1000Hz

LIFE EXPECTANCY: 100 x 10⁶ operations at signal levels. 5 x 10⁶ operations at full rated load

TYPICAL OPERATE TIME: As low as 500 μs including bounce

BREAKDOWN VOLTAGE: 200Vac, rms, 60Hz across open contacts or 275Vdc, max.

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. at 100Vdc +25°C, 40% rel. hum.

ENVIRONMENTAL (Operating): Vibration: 0.06″ d.a. or 20g's, 10 - 5000Hz. Shock: 100g's, 11 ±1ms, ½ sinewave. Temperature: −40° to +85°C.

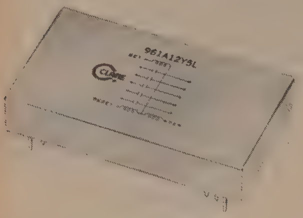
DRY REED RELAYS

961 SERIES



961A12Y5L
CLARE

Clare's 961 series Self-Latching Relays offer proven reed reliability plus bistable switching in one through six pole configurations. The heart of the relay is a new self-latching switch that provides the magnetic memory function without the external biasing magnets used in conventional latching relays.

The relays are designed to operate on the recommended one millisecond pulse at the specified nominal voltage. The pulse duration is limited only by coil heating and may be as long as one second. The 961 series relays are not subject to the over-drive limitations of conventional latching reed devices. Once pulsed into a set (closed) or reset (open) state, the relay will remain in that state until the opposite mode is selected.

SPECIFICATIONS

CONTACT FORMS: 1, 2, 3, 4, 5 or 6 poles, self-latching

CONTACT RATING: 5 volt-amperes, max., switched, 250Vac, max., switched, .5A, max., switched, 1.0A, max. carry

CONTACT RESISTANCE (Initial): 100 milliohms, max.

LIFE EXPECTANCY: 5 x 10^6 operations at 24Vdc, 200 mA, switched 10^7 operations at 48 Vdc, 100 mA, carry only, 10^8 operations at signal levels

SET/RESET PULSE DURATION: 0.5 millisecond min., at nominal voltage, 1.0 millisecond pulse recommended

SET TIME: 1.5 millisecond max., including bounce

RESET TIME: 0.1 millisecond max.

DIELECTRIC WITHSTANDING VOLTAGE: 600 Vdc min. across contacts, 150 Vdc max. between coils, 1000 Vdc min. contacts to coil and all points to cover.

INSULATION RESISTANCE: 10^9 ohms min. at 100 Vdc, +25°C, 40% relative humidity

ENVIRONMENTAL: Vibration — 10g, 2 to 2000 Hz
Shock — 50g, 11 ±1 milliseconds
Temperature — −10 to +85°C operating
−40 to +105°C storage

DRY REED RELAYS

CRTN SERIES CLAREED® DRY REED RELAYS

CLAREED RELAY
CRTN-1006
C. P. CLARE & CO.
CHICAGO, ILL.

Clare's economical CRTN standard size reed relays offer signal level to 15VA power handling capabilities, total input/output isolation, and low millisecond switching speeds. CRTN relays are direct replacements for our CRT series relays. Like all Clare reed relays, they are immune to false operation and are insensitive to overload transients that affect solid state devices. Clareed relays are rated for millions of reliable, trouble free operations.

Optional CRTN series contact configurations are 3 & 5 Form A, 1B or 2B, 1C or 2C, and 1A latching or 2A latching. Special relays are available with up to twelve contacts. UL recognized versions of our 1 to 12 Form A relays are available as listed in UL File E43775. The relays feature open assembly construction and PCB 2.5″ x .218″ grid mounting centers.

SPECIFICATIONS — CRTN

CONTACT RATING (Resistive Load): Power: 15 volt-amperes, max. Voltage: 250 volts dc or peak ac, max. Current 1 ampere, switched, max. 5 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): Initial: 70 milliohms max., measured at 100mA, 1000Hz

LIFE EXPECTANCY: 100 x 10^6 operations at signal levels. 20 x 10^6 operations at full rated load

TYPICAL OPERATE TIME: Less than 4.0ms including bounce

BREAKDOWN VOLTAGE: 500Vac, rms, 60Hz across open contacts or 750Vdc, max.

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. at 100Vdc +25°C, 40% rel. hum.

ENVIRONMENTAL (Operating): Vibration: 0.06″ d.a. or 10g's, 10-750Hz. Shock: 30g's, 11 ±1ms, ½ sinewave. Temperature: −65°C to +85°C

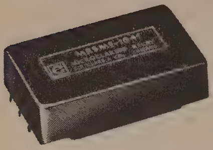
DRY REED RELAYS

MRME TYPE MICROCLAREED®



Clare's MRME Microclareed relays feature signal level to 10VA switching characteristics, and 800 microsecond typical response speeds in a miniature size package. The rugged MRME molded epoxy construction is ideal for critical environmental applications. MRME relays are direct electrical and mechanical replacements for our MRMC series relays.

MRME relays will handle simultaneous signal and power level switching in the same device over a wide band. Total input/output isolation and immunity to false operation by overload transients that affect solid state devices are characteristics of MRME relays.

Optional MRME relays are available in 5 Form A, 1 or 2 Form B, 1A1B or 2A2B, and 1A latching or 2A latching contact configurations. The pins are arranged in a 1.000″ x 0.100″ staggered offset grid mounting pattern. The MRME relay package readily mounts on 0.5″ PCB centers. Electrostatic shielding is available.

SPECIFICATIONS — MRME

CONTACT RATING (Resistive Load): Power: 10 volt-amperes, max. Voltage: 200 Volts dc or peak a.c. max. Current: 0.75 amperes, switched, max. 2.0 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): Initial: 200 milliohms max., measured at 10mA, 1000Hz

LIFE EXPECTANCY: 100 x 10^6 operations at signal levels. 10 x 10^6 operations at full rated load

TYPICAL OPERATE TIME: Less than 800μs including bounce

BREAKDOWN VOLTAGE: 250Vac, rms, 60Hz across open contacts or 350Vdc, max.

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. at 100Vdc +25°C, 40% rel. hum.

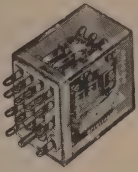
GENERAL PURPOSE RELAYS

354 SERIES



The 354 relay handles motor, lamp and solenoid switching requirements in everything from vending machines to disc drive applications. They also switch signal levels in intercoms, two-way radios and small telephone exchanges plus input multiplexing in control systems.

The options make it all possible. Contact ratings up to 5 amperes, ac or dc coils, plus solder lug/plug-in, taper tab or pcb terminals. The relays have UL recognition, File E47012, as Magnetic Motor Controllers for use in industrial applications.

SPECIFICATIONS

CONTACT RATINGS:

Contact Types	Ratings
Gold Flashed Silver Button	3A. at 28 Vdc or 120 Vac resistive or 1/10 H.P. at 120 Vac
Gold Flashed Silver Cadmium Oxide Button	5A. at 28 Vdc or 120 Vac resistive or 1/10 H.P.at 120 Vac

LIFE EXPECTANCY:
Electrical — 100,000 operations min. at rated load
Mechanical — 50 million operations

TYPICAL OPERATE TIME:
Operate — 15 milliseconds max., not including bounce
Release — 6 milliseconds max., not including bounce

BREAKDOWN VOLTAGE: 700 Vac, rms, 60 Hz min. between open contacts, 1500 Vac, rms, 60 Hz between all other mutually insulated elements

INSULATION RESISTANCE (OFF impedance): 1000 megohms min., at 500 Vdc, +25°C, 50% relative humidity

CONTACT RESISTANCE (ON impedance): 50 milliohms max. initially

U.L. RECOGNITION: File Number E47012 under Bulletins 508 "Industrial Control Equipment", 114 "Office Appliances and Business Equipment", 478 "Electronic Data Processing Units and Systems" and 751 "Vending and Amusement Machines"

ENVIRONMENTAL: Vibration — 6g's, 10 to 55 Hz (operating test, no contact chatter, hard mounted, 10 microsecond detection level)
Shock — 10g's, 11 ±1ms, ½ sinewave (non-operating test, no mechanical damage)
Temperature Range: −45°C to +50C° ac models
−45°C to +60°C dc models

PHYSICAL:
Weight: Approx. 1.5 oz.
Enclosure: Polycarbonate
Insulating material: High dielectric molded phenolic
Marking: Nominal voltage, part number, schematic, contact rating
Terminals: Solder lug/plug-in, taper tab or pcb

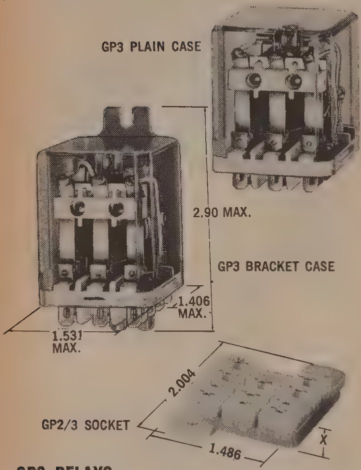
GENERAL PURPOSE RELAYS

GP3 SERIES

UL CSA

The GP3 (Lexan® dust cover) Relays are UL bulletin 508 recognized (UL File E47012) and CSA listed (File LR26727) as magnetic motor controllers. The rugged AC or DC relays are available in SPDT, DPDT and 3PDT configurations with Gold flashed Silver Cadmium Oxide contacts rated at either 10 amperes at 28Vdc resistive or 120/150Vac, .8 power factor. The GP3 plain case models are available with matching molded nylon sockets for plug-in applications. The GP3 bracket case model is available for direct chassis mounting only. Mechanical life expectancy is 10 million operations, electrical life 100,000 operations minimum at rated load .187" quick connect terminals standard.



SPECIFICATIONS — GP3

CONTACT RATING: 10 Amperes at 28Vdc resistive or 120/150Vac, .8 power factor. 6 amperes at 240/300Vac, .8 power factor. ⅓ hp at 120Vac, ½ hp at 240Vac

CONTACT RESISTANCE: Initial — 50 milliohms max. at rated current

LIFE EXPECTANCY: Electrical: 100,000 operations minimum at rated load. Mechanical: 10,000,000 operations

OPERATE TIME: Pickup: 15ms typical. Dropout: 11ms typical

BREAKDOWN VOLTAGE: 600Vac, rms, 60Hz minimum between open contacts. 1600Vac, rms, 60Hz all other mutually insulated elements

INSULATION RESISTANCE: 1000 megohms minimum at 500Vdc

	X
GPS 3003	.294"

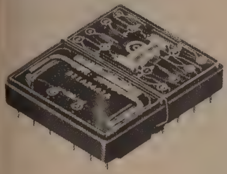
TELEPHONE TYPE RELAYS

511 SERIES



Clare's new 511 series Modern Telephone relays offer reliable low level to 2 ampere switching capabilities in 2 and 4 Form C models. The low profile package is only 0.35″ (8.9mm) high and allows PCB mounting on standard 0.5 inch (12.7mm) centers.

The 511 series enclosures feature an amber polycarbonate dust cover and a molded base of thermosetting electrical grade plastic material. This box type base with molded-in terminal pins fully protects the inside of the relay during wave soldering and subsequent partial immersion cleaning operations.

SPECIFICATIONS

CONTACT ARRANGEMENT:
2 or 4 Form C (Bifurcated) Standard
2 or 4 Form D (Bifurcated) or Form C/D combinations are optional.

CONTACT MATERIAL: Gold alloy over Palladium alloy mated with Palladium alloy

CONTACT RESISTANCE (On impedance):
Before Life: 100 milliohms max.
After Life: 200 milliohms max. (measured at rated load)

COIL DATA (at 25°C):
Voltage — 6, 12, 24, 48 Vdc
Power — 2.4 watts max. continuous, 1.3 watts nom., (typical), 0.8 watts pickup, (typical)
Resistance — See How to Order
Temperature Rise — 34°C per watt

LIFE EXPECTANCY:
Electrical — See Contact ratings
Mechanical — 100 x 10^6 operations
Operate Time (Including bounce): 15 ms max.

RELEASE TIME (Including bounce): 15 ms max.

BREAKDOWN VOLTAGE: 500 Vac, rms, 50/60 Hz min. between all mutually insulated elements

INSULATION RESISTANCE (Off impedance): 50,000 megohms min. at 500 Vdc, +25°C, 50% relative humidity

ENVIRONMENTAL: Temperature range (operating) −45°C to +65°C

CONTACT RATING (Resistive load at 25°C):

Current	Voltage	Life (Operations)
1.0A	28 Vdc	5,000,000
1.0A	48 Vdc	750,000

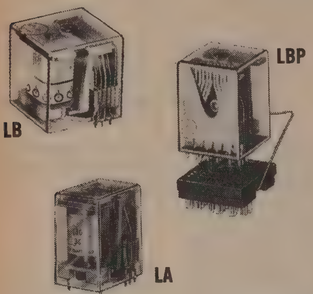
TELEPHONE TYPE RELAYS

LA/LB SERIES



Designed for the user who must have high quality at a reasonable price. The LA relays have 4PDT contacts and the LB/LBP relays have 6PDT contacts. These miniature relays have extraordinary switching capacity and versatility for their size. Contacts rated 2 amps at 28Vdc. LA/LB Series is for direct P.C.B. mounting; and the LBP Series is for direct plug into socket mounting. These relays are ideal components for military, industrial and commercial applications.

SPECIFICATIONS — LA/LB SERIES

CONTACT RATING (Resistive Load): 2A at 28Vdc

CONTACT MATERIAL: Palladium, with Gold overlay on bifurcated make and break springs

CONTACT RESISTANCE (ON Impedance): 100 milli-ohms max. initial

LIFE EXPECTANCY: 100,000 operations at rated load min. 100,000,000 operations mechanical life min.

OPERATE TIME: 10-25ms typical

RELEASE TIME: 5ms max.

BREAKDOWN VOLTAGE: 500Vac, rms, 60Hz between all mutually insulated points

INSULATION RESISTANCE (OFF Impedance): 500K Megohms min. at 25°C, 50% rel. hum.

ENVIRONMENTAL (Operating, 10 µs max. contact chatter): Vibration: 5-2000Hz, 10g's. Shock: 15g's, 11ms, ½ sinewave

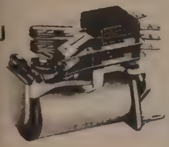
TELEPHONE TYPE RELAYS

J & JDP SERIES



J

JDP

J & JDP relays are compact telephone type relays for applications ranging from simple switching in alarm circuits to complex computer functions. Contact combinations of 4, 6 & 8 pole double throw are rated 4A at 120Vac, 60Hz or 30Vdc resistive. Mechanical life exceeds 70 x 10^6 operations.

Type J relays are open type construction for direct chassis mounting. Series JDP relays are furnished with a relay, a socket with solder lug terminals and a dust cover enclosure.

SPECIFICATIONS — J & JDP

CONTACT RATING (Resistive Load): 4A at 120Vac, 60Hz or 30Vdc

CONTACT MATERIAL: Twin Palladium (bifurcated make-and-break springs)

CONTACT RESISTANCE: 100 milliohms max. initial

LIFE EXPECTANCY: 1 x 10^6 operations min. at rated load, mechanical life 70 x 10^6 operations

OPERATE TIME: 10-40ms typical

RELEASE TIME (Coil unsuppressed): 1-10ms typical

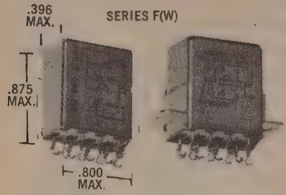
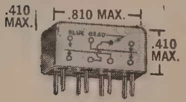
CRYSTAL CAN RELAYS

TYPE F(W) & HF(W)

SERIES F(W)



SERIES HF(W)



Clare provides full and half-size crystal can relays of unusual versatility, capable of reliable long life operation under adverse environments. The relays are available in both solder seal versions (F & HF) and welded seal models (FW & HFW). These relays are ideal for use in industrial application as well as military and aerospace. Relays employ a rigid frame to maintain permanent alignment of all elements. Contact arrangements are 2 form C. These relays are manufactured to meet Mil-R-5757/10 and 5757/9.

SPECIFICATIONS — F(W) & HF(W)

CONTACT RATING (Resistive Load): 2A at 28Vdc

CONTACT RESISTANCE (ON Impedance): 50 milliohms max. at 6Vdc, 100mA

LIFE EXPECTANCY: F & FW: 250,000 operations at rated load. HF & HFW: 100,000 operations at rated load

OPERATE TIME: F & FW: 5ms max. HF & HFW: 4ms max.

BREAKDOWN VOLTAGE: 1000Vac, rms, 60Hz between all terminals and case

INSULATION RESISTANCE (OFF Impedance): 1000 Megohms min.

ENVIRONMENTAL: Vibration: 5 - 2000 Hz, 0.125″ d.a. or 30g peak (HF & HFW). 10 - 3000Hz, 0.125″ d.a. or 30g peak (F & FW). Shock: 65g peak, 11 ±1ms Temperature range: −65° to +125°C

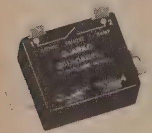
CLARAC^{T.M.} AC POWER RELAYS



The Clarac relay is an ultra-reliable hybrid relay featuring a reed input and a triac solid state output. The relays are very sensitive and operate with less than 200mW power inputs. Rugged construction, low cost and long life make the Clarac an excellent choice for tough circuit applications such as switching solenoids, ac motors, lamps and other industrial loads.

The units maximum ratings are 4, 8 or 15A at 240Vac, 50/60Hz when mounted on a 8″ x 8″ x 1/8″ aluminum heat sink for optimum operation. The relays must be derated when used without heat sink (free air) or at elevated temperatures (consult Clare Data Sheet 222 for surge current capabilities and additional details). The relays have dust and explosion proof nylon covers, quick-connect terminals and an average shipping weight of 2 oz.

SPECIFICATIONS

LOAD RATING: 4, 8 or 15A at 240Vac, 50/60Hz (400V max. peak)

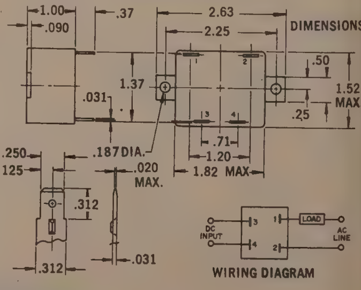
ELECTRICAL ISOLATION: Greater than 10^{10} ohms input/output isolation

LIFE EXPECTANCY: 100 x 10^6 operations min. with random switching during the cycle

TYPICAL OPERATE TIME: Turn On: 1ms max. Turn Off: At 1st zero amplitude current point of the sinewave after coil de-energization

BREAKDOWN VOLTAGE: 1000Vac, 60Hz min. between all mutually insulated terminals and the mounting plate

ENVIRONMENTAL: Operating temperature from 0° to 70°C (with adequate heat sink)



NOTE: ALL SPECIFICATIONS AND PRICES SUBJECT TO CHANGE WITHOUT NOTICE.

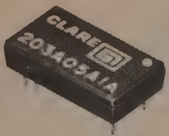
SOLID STATE RELAYS

NEW 203 SERIES



CLARE
203A05A1A

Clare's new SPST (N.O.) 203 series Solid State Relay features a zero-switching trigger circuit, photo-isolation and heavy duty ac power switching in a compact DIP package. The ¾ ampere rating at 0.35 power factor is unmatched in the industry. This device, will switch solenoid, motor starter, heater, incandescent loads and telecommunication ringer frequency loads with ease and reliability.

SPECIFICATIONS

INPUT:

Nominal — +4 to 12 Vdc
Continuous — +13.5 Vdc Max.

OUTPUT (Max. Ratings):

Repetitive Peak Offstate Voltage (Note 5) — ±400 Vdc
RMS Working Voltage (Note 1) — 140 Vac
RMS Output Current (Figure 1) — 0.750A
Peak One-Cycle Surge Current (Note 2 & Fig. 2) — 7.50A
Peak One-Second Surge Current (Note 2 & Fig. 2) — 3.75A

STORAGE TEMPERATURE: −40°C to +125°C

OPERATING TEMPERATURE: 0°C to +85°C

INPUT:

	Min.	Max.
Pickup Voltage (Must operate)	—	4.0 Vdc
Drop Out (Must release)	1.0 Vdc	—
Input Current (V_{input} = +4.5 Vdc)	—	12.5 mAdc
Input Current (V_{input} = +13.5 Vdc)	—	50 mAdc

Note: All engineering data subject to change without notice:

OUTPUT:

	Min.	Max.
RMS Load Voltage (Note 3)	6.3 Vac	140 Vac
RMS Load Current (Figure 1)	10 mAac	750 mAac
Load Power Factor (Note 4)	0.35	1.0
Load Frequency	20 Hz	63 Hz
Offstate Leakage Current (Load Voltage @ 120 Vac)		3 mAac
Output Voltage Drop (I_{Load}) = ¾A		1.7 V peak
Source Voltage (At 1st Turn On)		10 Vacpeak
Turn On Time (Zero Voltage Turn On)		½ cycle
Turn Off Time (Zero Current Turn Off)		½ cycle

ISOLATION (Input to output, input to case or output to case):

Dielectric Withstanding Voltage — 1500 Vac, rms, min.
Insulation Resistance — 10^{10} ohms
Capacitance - Input to Output — 10 pF

NEW 212 SERIES

Clare's new SPST (N.O.) 212 series AC Solid State Relays have heavy duty switching capabilities with 10 or 25 ampere ratings at 140 or 250 Vac. The opto-isolator provides total input/output isolation and the sensitive input is fully compatible with DTL/TTL logic. The 212 series relays are ideally suited for computer peripheral, process control and inductive load applications. One cycle surge current rating is 1000%. Arc free switching is suited for explosive atmospheres.

SPECIFICATIONS

INPUT at 25°C:

Control voltage — 3 Vdc min., 28 Vdc max.
Pickup voltage (must operate) — 3.0 Vdc max.
Dropout voltage (must release) — 1.0 min.
Input current at 5 Vdc input — 4 mAdc typ., 6 mAdc max.
Input current at 28 Vdc input — 35 mAdc typ.

OUTPUT at 25°C:

RMS load voltage — 12 Vac min., 140 or 250 Vac max.
RMS load current — .05 A min., 10 or 25 A max.
One cycle surge current — 10 times rated current max.
Repetitive peak offstate voltage (140 V rating) — 200 V peak-peak max.
Repetitive peak offstate voltage (250 V rating) — 400 V peak-peak max.
Output transient immunity (dv/dt) — 100 V/us min, 200 V/us typ.
Frequency range — 50 Hz min., 70 Hz max.
Offstate leakage current @ 140 V (140 V rating) — 8 mAac max.
Offstate leakage current @ 250 V (250 V rating) — 13 mAac max.

Load voltage at turn on — ±6 V peak typ.
Turn on time at 60 Hz — 8.3 ms max.
Turn off time at 60 Hz — 16.6 ms max.

ISOLATION (input to output, input and output to case):

Dielectric withstanding voltage (60 Hz) — 1500 Vac min.
Insulation resistance — 10^9 ohms min.
Capacitance input to output only — 8 pF typ., 10 pF max.

TEMPERATURE RANGE:

Operating and storage — −40°C min., +80°C max.

PHYSICAL:

Weight — 4 ounces
Case material — Self extinguishing Charcoal grey plastic
Base plate — Aluminum

SOLID STATE DIP RELAYS

233 SERIES

The small 233 Solid State DIP Relays give you a choice of dc switching: 60 volts at 400 mA or 250 volts at 100 mA. Provides pure solid state features. Fast, 1 microsecond response time, compatibility with 5 V digital logic, total input/output isolation. 10 billion operations. Standard 14 pin dual in-line package. Ideal for isolated line, lamp drivers and data couplers.

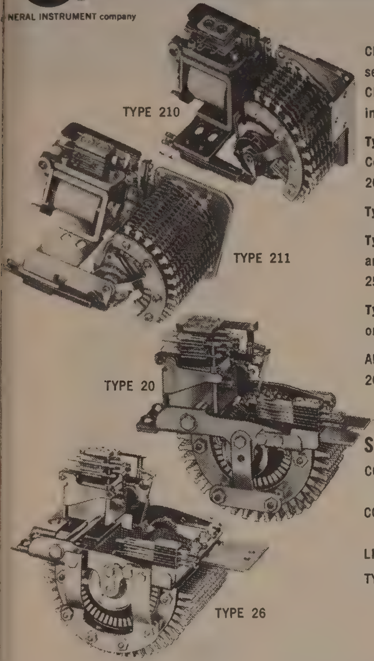
STEPPING SWITCHES



Clare stepping switches offer an economical alternative to solid state switching. Multiplexing, counting and sequencing problems are easily solved by providing the most working capacity in the smallest space. Clare stepping switches allow you to select, interrupt or change connections in a succession of circuits in response to current pulses.

Type 210 offers 3, 6 & 12 levels of 10 points with a life expectancy of 100 million steps at 12 levels. Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Operate time is approx. 20ms at 25°C and release time is 10ms. Solder lug terminals are standard.

Type 211 has the same electrical characteristics as the type 210 but in 3, 6, & 12 levels of 11 points.

Type 20 offers 4 & 8 levels of 20 points with a life expectancy of 180 million steps at 8 levels. Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Operate time is approx. 20ms at 25°C and release time is approx. 10ms at 25°C. Solder lug terminals are standard.

Type 26 has the same electrical characteristics as the type 20 but is offered in 4 & 8 levels of 26 points or 6 levels of 52 points.

ALL SWITCHES LISTED HAVE 1 BRIDGING LEVEL WITH THE REMAINING LEVELS BEING NON-BRIDGING. 2C OFF-NORMAL AND 2C INTERRUPTER CONTACTS ARE STANDARD.

SPECIFICATIONS

CONTACT RATINGS (Resistive Load): 0.1A at 115Vac or 30Vdc switched, 3A carry only; max.

CONTACT RESISTANCE (ON Impedance): 0.15 ohm typical

LIFE EXPECTANCY: (See description)

TYPICAL OPERATE TIME: Approximately 20ms at 25°C, release time approx. 10ms

BREAKDOWN VOLTAGE: 1000Vac, 60Hz across open contacts

INSULATION RESISTANCE (OFF Impedance): 10^{11} ohms at 500Vdc between levels

ENVIRONMENTAL: Vibration: 0.06″ d.a., 10 - 55Hz. Shock: 30g's, 11 ±1ms. Temperature: 0°C to +85°C

REED RELAYS

Computer Components Inc. HP Series of dry reed and mercury wetted relays offers the design engineer miniature, low profile, plug-in devices, with magnetically shielded coils.

Fast switching speeds and low power consumption make them applicable to control and instrumentation, low level switching, counting, high speed sampling, computers and associated peripheral equipment.

In addition to the company's standard dry reed and mercury wetted designs, CCI also produces exact replacements for IBM plug-in reed relays. (See Equivalency Chart on back page of catalog for specifications and cross reference part numbers.) Write or phone for catalog.

(1) The voltage (or current) at or below which the relay assumes its fully operated position. (2) The maximum voltage (or current) at which the relay must restore to its unoperated position. (3) Hold coil 100% if energized alone. Duty cycles less than 100% are based on a 3 sec. total cycle time, with maximum continuous energized time of 1.5 sec. (4) ±4% rated voltages. (5) Form B contacts are in center of A/B relays.

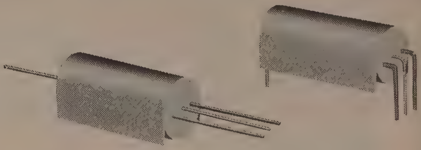
REED RELAYS

COTO
Coto SINCE 1917

High Quality Low-Cost
REED RELAYS

Series CR-4000

DESCRIPTION



These new uniquely-designed reed relays are manufactured and tested by the most advanced production techniques, which result in minimum customer costs, and a high standard of quality and performance.

- Husky 115 amp-turn coil allows use of a wide range of reed switches
- Only premium grade catalogued reed switches used throughout
- 100% testing of switches, coils and completed relays
- Relays are completely encased in a tough flame-retardant shell. The switch and coil leads are sealed with epoxy to provide strain relief and handling protection
- Wide variety of contact types to fit most switching applications

OPTIONS AVAILABLE:

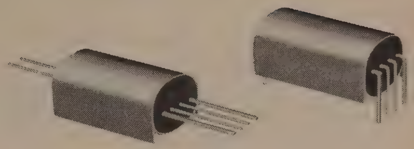
COTO High Quality Low-Cost

REED RELAYS

Series CR-4200

DESCRIPTION

The CR-4200 series reed relays, like the one pole CR-4000 type, have been designed to minimize customer costs without sacrificing quality and performance. These high-quality, low-cost relays are manufactured and tested with the most modern production techniques, and utilize premium grade standard reed switches.



- Husky 120 amp-turn coil allows use of a wide range of reed switches
- Only premium grade catalogued reed switches used throughout
- 100% testing of switches, coils and completed relays
- Relays are completely encased in a tough flame-retardant shell. The switch and coil leads are sealed with epoxy to provide strain relief and handling protection
- Wide variety of contact types to fit most switching applications

MINIATURE REED RELAYS

Series CR-2000 • • 1″ x .100″ Grid

DESCRIPTION Coto-Coil's Series CR-2000 is a new family of relays which have a pin termination on the popular 1″ x .100″ grid pattern. They are economical and available with a large variety of options (see reverse side).

The CR-2000 can be completely epoxy-encapsulated in a phenolic shell for maximum environmental protection and high insulation resistance. They are also available in a covered but non-encapsulated form for maximum economy.

MODEL No.

COIL VOLTAGE

"0" — not encapsulated
"1" — encapsulated

"0" — no magnetic shield
"1" — magnetic shield

"0" — standard
"1" — high reliability

"0" — no electro-static shield
"1" — electro-static shield

If all options are "0" omit last four digits.

AVAILABLE OPTIONS

- Relay — non-encapsulated — for economy
- Relay — encapsulated — for maximum protection and high insulation resistance
- Electro-static shield and/or magnetic shield
- Breakdown volts DC or peak AC — 1000 volts minimum
- High-reliability relays which have been conditioned by a special run-in and dynamic testing
- Other relay sensitivities and operating voltages

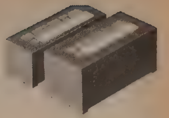
COTO

LOW THERMAL EMF REED RELAYS



Series CR-3200

Coto-Coil has developed a unique new method* that virtually eliminates offsets caused by thermal emf's in almost any type of reed switch. This design now allows the entire spectrum of reed relays to be used for very low signal switching. These new COTO relays are especially designed for scanning low-level analog and digital signals, multiplexing, data acquisition, and automatic testing of components and systems. They offer all the advantages of an encapsulated reed relay, such as high isolation, speed and long lifetime under practically any environmental conditions, in addition to a very low and stable offset.

*Patented

COTO's new line of low-offset relays is offered with a large variety of contact combinations, switch types and thermal offset ratings, in order to meet each customer's requirement with maximum performance at a minimum cost. The relays are encapsulated in an epoxy-filled shell, and the offsets that are present are remarkably independent of ambient temperature and external environment.

RELAYS	MODEL NO	COIL (Nominal) VOLT. (volts)	COIL (Nominal) RESIS. (ohms)	POWER (watts)	CONTACT FORMS	THERMAL EMF RATINGS*	PIN CONFIG.	PKG.

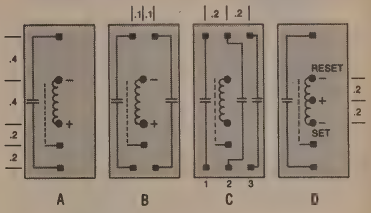
Package I: 1.375 x .500(A) x .500(B)
Package II: 1.375 x .600(A) x .650(B)
Shield and switch pins are .025" square, tinned copper.
Coil pins are .036" dia., nickel copper.
Pin pattern is centered within the case by ±.010".
Relays are encapsulated in a phenolic case, epoxy-filled.

PACKAGE and PIN CONFIGURATION (Bottom View)



Relays 3204, 3205, 3206, 3223 and 3233 contain a bias magnet, and coil polarity shown above must be observed.

Mercury-wetted Relays 3231, 3232 and 3233 must be mounted vertically with the arrow pointing up and shield pin at the bottom.

Switches 2 and 3 in Diagram C are the low-thermal switches in Relay 3250.

*Thermal Offset Ratings Per Switch:

4 <200nV	8 <3μV
5 <500nV	9 <5μV
7 <1μV	0 <100μV

Thermal offset measurements are made across each switch, except in Relays 3202, 3205, 3250, 3222 and 3232 where measurements are made differentially between the two low-thermal switches.

NOTES:
1) All relays are magnetically shielded.
2) Unless otherwise specified, all relays are electrostatically shielded.
3) Isolation resistance of 10^{10} or 10^{12} ohms is available.

CONTACTS	DRY	HIGH VOLTAGE	MERCURY WET
Max. Power (Volt-Amps)	10	10	28

Min. Breakdown Voltage (DC or Peak AC)	300	1000	800
Isolation Resis. (Ohms)	10^{10}	10^{10}	10^{10}
Operate Time (Typ. —msec)	1.5	1.5	2.0
Release Time (Typ. —msec)	.2	.2	.5
Average Life at Full Rating (# operations)	50×10^6	50×10^6	100×10^6

*0.010 Amperes max. @ 1000 VDC

INSULATION RESISTANCE
10^{10} ohms minimum at 100VDC, +25°C, 50% relative humidity between all isolated pins. 10^{12} ohms is also available.

CAPACITANCE
The contact-to-contact capacitance for low thermal contacts is approximately 2.0pf. This value is composed of 0.2pf from the reed contacts and 1.8pf from the low thermal offset circuitry. With the electrostatic shield the contact-to-coil capacitance is typically 2.0pf.

MUST OPERATE and RELEASE VOLTAGES
Must-operate voltages at 25°C:
5v relay — 3.8; 6v relay — 4.5; 12v relay — 9.0
Must-release voltages at 25°C:
5v relay — 0.4; 6v relay — 0.5; 12v relay — 1.0

INITIAL CONTACT RESISTANCE
The maximum initial contact resistance for each contact is 0.3 ohms. Typically the initial contact resistance measures to be 0.250 ohms and is composed of 0.070 ohms from the reed contacts and 0.180 ohms from the low thermal offset circuitry.

TESTING and RELIABILITY
The low thermal emf reed relays are most commonly used under essentially dry circuit conditions. For these low-level loads the life of a clean contamination-free switch can exceed 500 million operations. In order to assure the highest possible reliability each switch and completed relay is subjected to an extensive series of cycling and dynamic testing. In addition each isolated pin is checked against every other pin for insulation resistance at the rated breakdown voltage. Finally a thermal offset test at the rated voltage is performed.

THERMAL TESTING. Care must be exercised in setting up in-house testing procedures for measuring thermal offsets of the CR-3200 relays. Without properly designed test circuitry and instrumentation, far greater thermal EMF offsets can be generated external to the relay than internally. Coto's engineering department will be pleased to assist in recommending testing circuitry and components for Q/C testing.

EFFECT OF AMBIENT TEMPERATURES. One of the specific design features of the CR-3200 low thermal relay is its exceptional stability with ambient temperature changes. For the purpose of rating, all standard CR-3200 relays are tested at a nominal 25°C ambient. However, temperature excursions from 0°C to 50°C will result in no more than a 500 nanovolt offset change in a 1μV rated relay.

The Coto Series 1000 Miniature PCB Reed Relays offer the most comprehensive choice of switching parameters with pin terminations on the popular grid pattern of 1" x .015". Included are 21 contract combinations of Form A, B and C dry reeds and 11 combinations of Form A and B in mercury wetted types. The latter offer greatly expanded switching capability, and eliminate all contact bounce. Up to 6 poles per relay and 5 standard coil voltages are optional. In addition, special purpose reed switches, windings and terminal pin options, electrostatic and magnetic shielding may be specified.

Drive coil windings have been carefully optomized to assure fast contact transfer. This is particularly important in relays carrying several reeds, since the first to close shunts out a disproportionate percent of flux unless adequate overdrive is available. Typical pull-in and drop-out is 1 mil/sec. and .5 mil/sec. respectively, including bounce and coil rise and fall time. Hg wetted reeds are somewhat slower, averaging 2 mil/sec. and 1 mil/sec. Operate times are exclusive of any delay introduced by contact protection devices. Reactive or high inrush loads will require contact protection, as with any type relay if maximum reliability and life are to be realized.

For information on contact protection request Technical Bulletin No. CS-1. For engineering assistance address Sales Engineering Dept. and include full details.

PHASE MONITORS

PHASE SEQUENCE, PHASE LOSS & UNDER VOLTAGE MONITOR/RELAY — SL SERIES 3ϕ

The **SL SERIES** is designed for use in applications where motor rotation or connection to the power line is critical, or where loss of one or more phases will cause damage to electrical equipment. If Phase Sequence is correct and full line voltage is present on all three phases, internal control relay will energize.

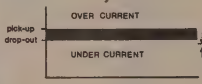
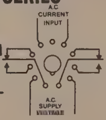
CURRENT MONITORS

CURRENT MONITOR/RELAY • CM SERIES





The **CM SERIES** consists of an electro-magnetic current detector which senses a current level. When the monitored current exceeds the trip point setting for a period greater than the response time, an internal 10 amp. DPDT relay will operate. A current decrease of at least 5% of trip point is required for relay to de-energize. The monitors are equipped with appropriate time delays to accommodate start-up transients and short-time line variations.

AC KNOB ADJUSTABLE:

Catalog No.	Supply Voltage	Trip Point (Amps)
CMA-120-AKA- 1	120VAC	0.2- 1.0
CMA-120-AKA- 5	120VAC	1.0- 5.0
CMA-120-AKA-10	120VAC	5.0-10.0

Also available for 240AC supply voltage.

RESPONSE TIME: Operate: 1 sec. Release: 30m.sec.

CURRENT DIFFERENTIAL: 5% of Trip Point

TRIP POINT (FIXED): ±10% of setting

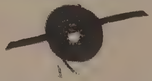
TEMPERATURE: Operating: 0°C to +55°C. Storage: −45°C to +85°C

RATED OUTPUT: DPDT Relay — Resistive 10A @ 28VDC or 120VAC — 5A @ 240 VAC

SUPPLY POWER (AUXILIARY): 3 Watts (Approx.)

ENCLOSURE: A. 1.75 x 2.38 x 3.0 H.

CURRENT TRANSFORMER • CT SERIES



The **CT Series** designed to be used with the CM Series monitors, when AC currents above 10 amps. are to be detected. This toroidal transformer is used to extend the range of the 5 amp. current monitor. The transformer slips over a conductor and is provided with a secondary lead length of 24 in.

CT SERIES — CURRENT TRANSFORMER

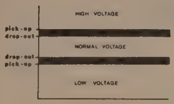
SPECIAL CONTROLS



VOLTAGE MONITORS

VOLTAGE BAND MONITOR/RELAY — VB SERIES

The VB SERIES offers protection to equipment which is required to operate between two voltage limits. The solid state monitor determines pre-selected under or over voltage conditions and de-energizes an internal 10A DPDT relay if these limits are exceeded. The VB SERIES is equipped with a time delay to accommodate start-up transients. Both AC and DC units are available.

AC KNOB ADJUSTABLE*

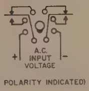
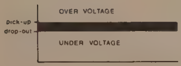
A ENCLOSURE



UNDER VOLTAGE OR OVER VOLTAGE MONITOR/RELAY UO SERIES

The **UO SERIES** consists of a solid state voltage detector that senses a voltage greater than a pre-set "pick-up" voltage and causes an internal DPDT relay to operate. When the voltage drops to the pre-set "drop-out" voltage, the output relay will de-energize. A hysteresis is set into each unit to allow a differential between pick-up and drop-out. UO SERIES, adjustable, with close differential between pick-up and drop-out. Both AC and DC units available.



AC KNOB ADJUSTABLE*

APPLICABLE TO ALL VOLTAGE MONITORS

Response Time: Pick-Up: 30 m. sec. Drop-Out: 0.5 sec.

Temperature: Operating: 0°C to +55°C. Storage: −45°C to +85°C.

Rated Output: DPDT Relay — 10A @ 24VDC or 120VAC —5A @ 240VAC Resistive.

Power Required: 3 watts (Approx.).

Enclosure: A: 1.75 x 2.38 x 3.0 H. Drop-out time to 2.5 sec. In "A" enclosure, to 5.0 sec. In "F" enclosure available on request. F. 3.6 x 2.63 x 3.1 H.

THREE PHASE VOLTAGE BAND MONITOR/RELAY PB SERIES

The **PB SERIES** offers protection to three phase equipment which is required to operate between two voltage limits. The three phases are monitored for a pre-selected under or over limit. An internal control relay is de-energized when the voltage goes outside of these limits. This device provides both under and over voltage monitoring of each phase of a Delta or Wye system in one package. The monitors are equipped with a drop-out time delay to accommodate start-up transients. With normal operating voltages on all phases, an internal relay will be energized. If the voltage on any phases goes above or below the drop-out limit, the signal to the time delay will be removed. If this out-of-limit condition exists on any phase for a period longer than the release time or the time delay, the output relay will de-energize. PB SERIES is offered in AC only.

TIME DELAY RELAYS

DIVERSIFIED ELECTRONICS TIME DELAY RELAYS NOW AVAILABLE UP TO 900 SECONDS

Diversified Electronics offers a wide variety of solid state time delay relays designed to meet the severe environment and timing applications encountered in industry. The time delay relay combines a solid state timing circuit and a heavy-duty 10 amp DPDT relay in a single package. Timing is accomplished by charging a capacitor through a resistor. When the voltage across the capacitor reaches a triggering point, a solid state trigger circuit turns on and energizes the coil of an internal relay. For ordering refer to **ORDER INFORMATION CODE.**

AC SERIES

Diversified Electronics, Inc. offers a full line of protection monitors for Air Conditioning and Refrigeration equipment. These monitors protect equipment against damage caused by low voltage, phase loss and short cycling. The monitors are offered in several combinations. The following is a description of each series. All units are in the "N" enclosure.

ANTI-SHORT CYCLE TIMERS

AC-100 Series

The **AC-100 Series** is an anti-short cycle timer used on equipment with 24VAC control circuit. The AC-100 prevents compressor motor damage by not allowing it to re-start for 5 minutes if momentary power or thermostat interruption occurs. The input monitors the 24VAC control circuit. The output interrupts the 24VAC control circuit.

SPECIFICATIONS AND RATINGS

Operating Voltage: 24VAC ±15%
Relay Contact: 2 amps resistive @ 24VAC
Terminations: ¼" quick connect terminals

TABLE 1

Part No.	Delay Time ±20%
AC-100-3	3 Minutes
AC-100-4	4 Minutes
AC-100-5	5 Minutes

AC-200 Series

The **AC-200 Series** is an anti-short cycle timer used on equipment with 24,120, or 240VAC control circuits. The AC-200 prevents damage to compressor motors caused by short cycling. The input monitors the control circuit. The output interrupts the control circuit.

SPECIFICATIONS AND RATINGS

Part No.	AC-200-5-24	AC-200-5-120	AC-200-5-240
Operating Voltage	24VAC	120VAC	240VAC
Relay Contact Rating (AC Resistive)	2.0 amps @ 24 VAC	3.0 amps @ 120VAC	2.0 amps @ 240VAC
Delay Time	All 5 minutes ±20%		
Terminations	All ¼" quick connect terminals		

VOLTAGE MONITOR AND ANTI-SHORT CYCLE TIMER COMBINATION

AC-103 Series Under Voltage Monitor with Built-In Anti-Short Cycle Timer

The **AC-103 Series** is a combination of the AC-100 Series Anti-Short Cycle Timer and under voltage monitor, used on equipment with 24VAC control circuit. The AC-103 Series prevents compressor motor damage by removing primary power from the compressor for five minutes if the supply voltage drops below the drop-out voltage and remains longer than 0.5 second, or if thermostat interruptions occur. The input monitors the primary power. The output interrupts the 24VAC control circuit.

SPECIFICATIONS AND RATINGS AC-103-230

Anti-Short Cycle Timer
Control Voltage: 24VAC ±15%
Delay Time: 5 minutes ±20%
Power Required: 0.5 watts nominal
General:
Internal Relay Contact Rating: 2 amps @ 24VAC resistive Terminations: ¼" quick connect terminals

TABLE I

Part No.	Operational Voltage	Drop-Out Voltage	Pick-Up Voltage
AC-103-230	280/240VAC	190VAC	198VAC
AC-103-240	230/240VAC	202VAC	210VAC

AC-107 Series Sequence, Phase Loss and Under Voltage Monitor with Built-In Anti-Short Cycle Timer

The **AC-107 Series** is a combination of the AC-100 Series and the 3 Phase Monitor used on equipment with 24VAC control circuit. The AC-107 prevents compressor motor damage by removing primary power from the compressor if any one or more of the following four "fault conditions" exist.
1. Single Phasing (Phase Loss) 2. Improper Phase Sequence 3. Under Voltage (Brownout)
4. Thermostat Interruption

The input monitors 3 phase primary power. The output interrupts 24VAC control circuit.

When the phase sequence is correct and full power is present on all three phases, the internal relay energizes. When any one or more of the four "fault conditions" occur, the internal relay de-energizes. This action opens the 24VAC control circuit, dropping the compressor motor off the line for five minutes, allowing the head pressure to equalize.

SPECIFICATIONS AND RATINGS

Anti-Short Cycle Timer
Control Voltage: 24VAC ±15%
Delay Time: 5 minutes ±20%
Power Required: 0.5 watts nominal
General
Internal Relay Contact Rating: 2 amps resistive @ 24VAC Terminations: ¼" quick connect terminals

NEW PRODUCTS

AVAILABLE IN '75

VOLTAGE UNBALANCE MONITOR/RELAY — SLB SERIES 3 ϕ

The **SLB SERIES** is designed for use in three phase applications where phase voltage unbalance may damage polyphase motors or electrical equipment. If the phase voltage unbalance is less than the "volts unbalance" setting and the sequence is correct, the internal relay will energize. Unit will be available in F enclosure for 120, 240 and 440VAC with adjustable unbalance. Also available with manual reset.

CURRENT UNBALANCE MONITOR/RELAY — SMB SERIES 3 ϕ

The **SMB SERIES** is designed for use in three phase applications where unbalanced phase currents may damage polyphase motors or electrical equipment. If the phase current unbalance is less than the "amps unbalance" setting and the sequence is correct, the internal relay will energize. Unit will be available in F enclosure for 120, 240 and 440VAC with adjustable unbalance.

OVER CURRENT MONITOR/RELAY — CMO SERIES

The **CMO SERIES** internal relay energizes when the monitored current exceeds the preset current level for longer than the preset time delay period. Relay de-energizes when the monitored current drops 5 percent below the preset current level for longer than 0.5 seconds. Standard adjustable current ranges are: .05 to .25, .2 to 1.0, 1.0 to 5.0, and 2.0 to 10.0 amps. Pick-up time delay is adjustable from 0.1 to 5.0 seconds.

UNDER CURRENT MONITOR/RELAY — CMU SERIES

The **CMU SERIES** internal relay de-energizes when the monitored current drops below the preset current level for longer than the preset time delay period. Relay energizes when the monitored current is 5 percent above the adjustable current level for longer than 0.5 seconds. Standard adjustable current ranges are: 0.5 to .25, .2 to 1.0 to 5.0, and 2.0 to 10.0 amps. Drop-out time delay period is adjustable from 0.1 to 5.0 seconds.

OVER CURRENT LOCKOUT/RELAY — CML SERIES

The **CML SERIES** internal relay energizes when the monitored current exceeds the preset current level for longer than the preset time delay period. The internal relay remains energized until the reset button is pushed. If the monitored current is below the preset current level when the reset button is released, the relay will de-energize. If the monitored current is above when the reset button is released, the relay will re-energize. Standard adjustable current ranges are: .05 to .25, .2 to 1.0, 1.0 to 5.0, and 2.0 to 10.0 amps. Pick-up time delay is adjustable from 0.1 to 5.0 seconds.

SPECIAL DESIGNS

Douglas Randall makes custom designed relays to solve difficult problems. A few models are shown below to illustrate the variety of variations available. Special molding techniques make it possible to manufacture unusual sizes, shapes and terminal arrangements with low tooling costs.

The electrical variations possible with Reed Relays are practically limitless. A few are listed here:

Double Coil Relays.

Relays to operate with coil currents as high as 10 Amperes.

Mixed dry and Mercury wet switch combinations, or mixed High Power and Low Power switches.

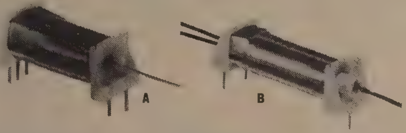
Multipole relays with different pull in or drop out levels for the switches.

Low voltage relays — operate @ .5VDC.

Controlled operate and/or release voltages.

Douglas Randall will gladly review your applications and offer rapid engineering and prototype service.

HIGH INSULATION RESISTANCE RELAYS



Two typical designs are shown above:

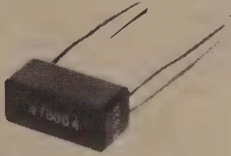
A — A miniature reed relay with a floating lead to maintain high IR.

B — This is a relay using Form A and Form B switches timed to provide a Form C (break before make) function with flying leads to maintain 10^{13} ohms. Up to 5 Form A contacts are available @ 10^{13} ohms.

PROXIMITY SWITCH

FORM B

This is a Form B switch and magnet assembly, .7″L x .150″ sq. The normally closed switch opens, when approached by an ⅛″ square steel rod.

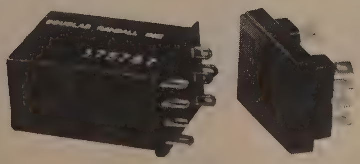


Epoxy molded switch and magnet assemblies are available in many sizes, contact ratings and terminal arrangements.

SPECIAL HIGH VOLTAGE RELAY

This relay has three separate coils, each containing a 5,000VDC and a 10,000VDC switch. The package is molded with a flame retardant epoxy and constructed to withstand 15,000VDC between the switches and all other conductors. The relay is 3⅞″L x 2⅜″W x 1½″H.

CRADLE RELAY



Using special headers, Douglas Randall designed a Reed Relay to plug into cradle relay sockets. This application called for faster operating speeds than cradle relays were able to meet, less than 3 msec.

SNAP-IN RELAYS

This 4 pole relay mounts in Berg-clips, like the Series SI on page 000. Douglas Randall can now duplicate the following discontinued IBM models:

1 — Position: 766040, 766042, 766059, 766060, 766065, 766068 and 766086

2 — Position: 766043, 766044, 766057, 766067, 766072 and 766087

4 — Position: 766046, 766047, 766066, 766071 and 766079

HIGH TEMPERATURE RELAYS

Use of Class H insulation throughout and design of the coil to provide good contact pressure over a wide temperature range make this relay suitable for 180°C operation.

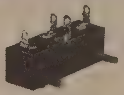
HIGH SENSITIVITY RELAYS

The relays shown will operate at 10 MW coil power.

PLUG-IN RELAYS

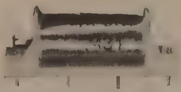
Reed relays are easily adapted to standard style headers for socket mounting.

SPECIAL TERMINALS & MOUNTING SCREWS



The relay shown has terminals to accept #16 lead wire and mounting screws. Entire package is epoxy encapsulated for mechanical strength.

IN-LINE TERMINALS



This relay is open construction with four in-line terminals for P.C. mounting. Using a special mounting plate, this relay can meet 10^{13} ohms insulation resistance.

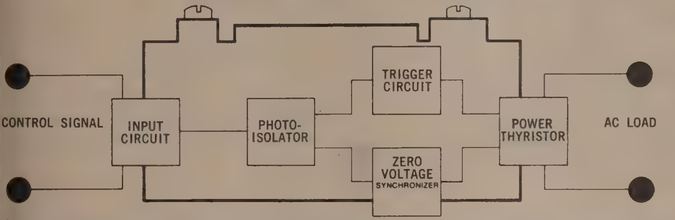
Standard Models are furnished with ¼" Quick Connect adapters.

Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory for details.



Douglas Randall offers 20 SOLID STATE RELAY models to switch 120VAC or 240VAC loads at 4A, 8A, 12A, 25A or 40A, the broadest line in the industry. In addition these options are available:

- Thermal Overload Protection
- Form B (SPST-NC) Switching — Form A (SPST-NO) is Standard
- Constant DC Signal Current
- 400Hz Switching

Douglas Randall SOLID STATE RELAYS combine Opto-Isolation and zero voltage turn-on, zero current turn-off to switch high power AC loads. **Improved design and internal construction has resulted in models capable of switching 40 Amps, 120VAC or 240VAC.** DC control signal relays operate from 3 to 32VDC inputs and are ideally suited for low level control systems or DTL, TTL and MOS logic. AC control signal relays operate from 90 to 260VAC or 80 to 140VDC inputs.

Opto-isolator coupling and zero cross-over switching combine to give completely solid state operation and eliminate any moving parts which could wear out, arc or oxidize. Since only a tiny light source provides coupling between the input and output, sensitive control signal circuits are completely isolated from load circuit transients, making Douglas Randall SOLID STATE RELAYS the optimum choice for power switching. Opto-isolator coupling also gives additional advantages:

a) High Isolation — 2500V or 10^{10} ohms DC
b) High Sensitivity — 10mW at 3VDC Input
c) TTL, DTL logic compatibility with no need for drive transistors
d) No need for electrostatic or magnetic shielding
e) Inputs are not damaged by reverse polarity

Zero voltage switching makes Douglas Randall SOLID STATE RELAYS superior to electro mechanical or non-synchronous solid state models. Figure 1 shows the operation when a DC control signal is applied. Regardless of when the DC signal is applied, current does not flow in the load until the load circuit voltage goes through zero. When the DC signal is removed, load current continues to flow until it goes through the zero point (up to ½ cycle) at which point the relay opens the load circuit. Figures 2 and 3 show the load current wave form for resistive and inductive loads respectively. The time scale has been expanded to illustrate the area near zero cross-over in greater detail. It can be seen that switching time is less than 200 micro seconds — 10 to 100 times faster than electro-mechanical power relays. In addition to fast operation, zero crossover switching gives many other advantages:

a) Infinite life at rated current for inductive, capacitive and lamp loads as well as resistive loads
b) No RFI, contact bounce or arcing noise.
c) Reduced inrush currents extend lamp life
d) Operation is not affected by load phase angle
e) High reliability
f) No moving contacts to ignite explosive gases
g) Protected against dv/dt

	40A	D40B	A40B

NOTES & OPTIONS

1. Special wide range models can be made which will switch loads from 18V to 140V. These relays can handle either 24VAC or 120VAC loads.
2. Special models are available which switch loads at 400Hz.
3. 2500VAC isolation can be supplied on request.
4. Form A (SPST-NO) relays are standard. Form B (SPST-NC) switching is optional. Models incorporating this feature are designated by NC. e.g. A40B-NC.
5. All DC models are TTL compatible over the full operating temperature range.
6. All relays incorporate an RC snubber network which prevents false operation from transients up to the dv/dt level shown. More severe transients may require additional external protection. We will review your application and recommend the additional protection needed.

THERMAL OVERLOAD PROTECTION

Douglas Randall Solid State Relays can now be obtained with Thermal Overload Protection, a unique feature which turns the relay off before long thermal overloads damage it. Whether the thermal overload is caused by excessive current, an improper heat sink, or rise in ambient temperature, the relay will turn off in time to prevent internal damage. The thermal protection is fully automatic and self-resetting after the relay cools to a safe operating temperature. This added feature will be especially valuable where ambient temperature is uncertain, such as prototype applications. Models incorporating thermal overload protection are designated by a "TC" as D12A-TC.

CONSTANT SIGNAL CURRENT

Solid State Relays can be made with constant signal current circuitry. Any DC signal relay with this option will draw 3.5mA signal current over the entire voltage range of 3-32VDC. Relays with this option are designated by CC. e.g. D12A-CC.

SPECIAL DESIGNS

Douglas Randall has designed many special solid state relays, such as a polarized, latching, SPDT unit which will switch 12A at 28VDC. We also have the capability of making special package sizes and terminal arrangements for our solid state relays at moderate tool cost. Your inquiries will be reviewed promptly.

SERIES K — DC OUTPUT RELAYS

Series K relays switch DC loads of 4, 8 or 12 Amperes at 24VDC or 48VDC at speeds well in excess of 50 microseconds. Like Douglas Randall AC relays they are epoxy encapsulated in a small, rugged phenolic case and contain an integral heat sink. They have convenient mounting holes and can accommodate screw or spade terminals.

MODEL NUMBERS

Output Voltage	Current	Model
2-32VDC	4 Amp 8 Amp 12 Amp	K04A K08A K12A
2-55VDC	4 Amp 8 Amp 12 Amp	K04B K08B K12B

DOUGLAS RANDALL SERIES CV CONVERTER RELAYS

These relays interface between computer logic and AC or DC power lines. Models **CV1** and **CV2** are AC Output versions which incorporate Zero-Crossover switching. Model **CV3**, **CV4** and **CV5** are DC Output Units, Models **CV3** and **CV4** operating from DC Inputs, while Model **CV5** operates from a 120VAC Input.

All models are epoxy encapsulated in phenolic cases for protection against severe environments and have terminals for installation on printed circuit boards.

SOLID STATE CONTROLS

SOLID STATE PROPORTIONAL CONTROLS

DESCRIPTION

Douglas Randall Proportional Control Modules provide a variable AC output voltage to loads up to 15 amperes. They are solid state, full wave SCR phase angle control units, which offer a reliable, compact method of controlling motors, heaters, incandescent lamps, and other AC devices.

Six models are available, rated 5, 10 and 15A at 120VAC or 240VAC. Standard units provide output voltage variation from 0% to 80% of full voltage. Optional high range models provide a control range from 20% to 95% of output voltage.

The units are epoxy molded in compact phenolic cases giving maximum environmental protection. All solid state circuits provide infinite life. Optimum heat transfer is obtained by use of integrally molded heat sinks — the same as on Douglas Randall's Solid State Relays. Two hole screw mounting and screw or spade terminals provide ease of installation.

OPTIONS

High Range Units:
20% to 95% of output.

Preset Minimum/Maximum:
Set internally at the factory to any value in the control range.

Preset Output:
Not variable — fixed output is preset internally to any value in the control range.

Special Ranges, Control Potentiometers and 400Hz Load Controls are available as special designs.

MODEL NUMBERS

durakool

• Mercury time delay relays • Contactors • Tip and tilt switches

Unsurpassed for long life, durability and quietness of operation– the durakool difference

Durakool products, while varied in application and end-use, share many common construction features. All are designed and manufactured for maximum durability and quietness of operation.

Mercury-to-mercury units on all time delay relays and contactors through 35 amps utilize two pools of mercury for the contacts, with one pool electrically a part of the center insulated electrode. Both pools are in a hermetically sealed hydrogen atmosphere. Contacts are open when the pools are separated by a ceramic barrier and closed when the two pools flow together.

Mercury-to-metal contacts (on contactors 60 amp and over and certain tip & tilt switches) operate similarly except that one pool of mercury is replaced by a refractory electrode.

Some of our unique construction features are:

1. **A single moving** part contributes greatly to trouble-free operation over long periods of time.
2. **Time Delay Relays:**All are of fixed-delay or tamper-proof design. Timing can be field-adjusted only by replacing the tube. A single moving part actuated by the magnetic field of the coil accomplishes this action. . .insuring long trouble-free operations. Timing is accomplished by the metering of mercury through a precision orifice.
3. **All-Steel Construction:** Our deep-drawn cans and rugged hermetic seal when welded together provide an unbreakable unit. The metal enclosed contacts provide added insurance against danger of explosion and fires; and the "all-steel body" acts as one side of the circuit, eliminating one inside electrode.
4. **Hermetic Seals:** We construct our own hermetic seals to engineering specifications so exacting that our units retain high-pressure hydrogen indefinitely. Further, this construction keeps the contacts 100% free of all foreign matter throughout the life of the unit.
5. Hypressure Hydrogen Gas is permanently retained inside the all-steel body by using a hermetic glass-to-metal seal. Hydrogen's superior arc-quenching properties drastically reduces the "make and break" arcing and dissipates the heat. This allows the overall size of the unit to be smaller than conventional contactors.
6. **Unequalled Quality and Durability:** Because of our rugged construction the switching of heavy loads, tungsten loads and highly inductive circuit loads is much more readily handled by a Durakool product as in contrast to conventional open contactors or easily-damaged solid state units that can't withstand high transients.
7. **Low Contact Resistance** is insured throughout the life of the product because of the overall design and extremely high product quality.
8. **Product choices include:** 1, 2 and 3 pole combinations; contact ratings of 10, 15, 20, 35, 60, 80, 100, and 150 amps; timed open and/or timed closed contacts; normally open or normally closed contacts; various types of contact terminations or lead wires; insulated or uninsulated tubes; various lead wire insulations, lengths and terminations; a wide range of coil voltages and frequencies; many class "B" (130° C) coils; wiring terminals or lead wires for coils, insulating back panels for mounting; and NEMA type cases for enclosing the units.
9. **Easy Replacement:** Replacement of the entire Durakool contactors and tilt switches is simple and easy. As good as Durakool products are, nothing lasts forever. With a Durakool relay, timer or contactor, any part can be replaced within minutes. This means the user buys only the replacement item needed.
10. **U.L. and C.S.A. Ratings:** Durakool contactors are listed by U.L. under the classification of "Switches, Magnetically Operated" and reports have been filed under E 35126. At C.S.A., the listing is under the classification "Switches-Automatic Magnetic Type," and reports have been filed under 22416. Many of our units have been listed for applications where an increased endurance test is required. Durakool contactors which carry a 700 or 7000 series number are U.L. listed. Most of these, as well as some 300 series numbers, are C.S.A. certified. Ask for our ES-497 for U.L. listed units and ES-498 for C.S.A. certified units to obtain full information. New ratings are constantly being added to our listings. Underwriters' Laboratories do not approve any mercury tilt switches except on the application where they are used. Durakool switches are designed to pass U.L. tests when properly applied.
11. **Multiple Ratings:** Each product series carries a multiple general purpose load rating. All ratings are subject to change without notice.
12. **WARRANTY:** Durakool shall replace any of its products which contain defective material or workmanship. Durakool makes no warranty of merchantability or of fitness of its products, nor does it make any other implied or express warranties beyond the foregoing promise to replace any of its products which contain defects in material or workmanship.

time delay relays

TIMERS FOR HEAVIER LOADS

Any of the timers can be combined with any of the contactors . . . normally open or normally closed . . . to provide the equivalent of a timer with the contact action and contact rating of the contactor with which it is combined. Units can be supplied on a panel (as shown above) or as individual units, and be mounted and connected in the field. The diagram at left shows the connections used in the illustrated unit.

durakool
tip & tilt switches

General
Durakool manufactures thousands of custom switches for specialized O.E.M. applications. These include horizontally-mounted tilt switches; vertically-mounted tip switches; and SPDT which control two different circuits on the same switch.

Mercury-to-mercury — All Durakool G line switches have mercury-to-mercury contact action. Contacts are made and broken between two pools of mercury, separated by a ceramic insulator. This design insures clean snap-action make and break with no chatter and little erosion, even under heavy loads when properly applied.

Mercury-to-metal — Durakool A line switches are made in the mercury-to-metal contact design. Contact is made between a pool of mercury and a metal electrode.

Uninsulated switches — are without lead wires, except on special order. These uninsulated all steel, mercury tilt switches save space, permit flexibility in design and speed bench assembly. They are recommended to wiring harness and component manufacturers for applications involving potting or encapsulating in plastic or rubber.

Insulated switches — May be obtained insulated in molded phenolic (regularly furnished) or in a variety of other casings on special order.

Leads — All insulated switches are supplied with extra flexible cotton or neoprene lead wires with ring type terminals.

U.L. Approved — Underwriters' Laboratories do not approve any mercury tilt switches except on the application where they are used. Durakool switches are designed to pass U.L. tests when properly applied.

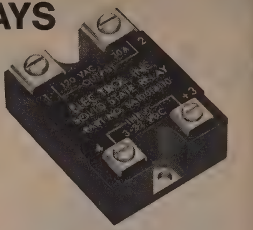
ELEC-TROL SOLID STATE RELAYS



General Description:

Elec-Trol Solid State Relays offer zero cross-over (synchronous) switching of high power AC reactive loads with 1500 VRMS photo isolation between the input and output. Capable of being driven directly by TTL logic, DC models include reverse polarity protection and Elec-Trol's new FET current limiting input circuit which prevents uncontrolled output operation when noise transients appear at the input. It also provides limited input current across the range of input voltages. Available in both AC and DC models, these totally solid state relays provide trouble free operation in both sensitive and hostile environments.

GENERAL SPECIFICATIONS

- Operating temperature:
  —30°C to +100°C
- Max on or off response time:
  DC Input: ½ Cycle
  AC Input: 1½ Cycle
- Peak off state voltage:
  140 VRMS Unit: ±200 Volts
  280 VRMS Unit: ±400 Volts
- Max output peak on voltage:
  6 Volts (see fig. 1)
- Isolation — input to output:
  1500 VRMS
  10^{10} OHMS
  8 PF
- DV/DT:
  Off state: 100 v/μsec.
  Commutating: 5 v/μsec.
- Weight: 4 oz. or 114 gm. max.

ELEC-TROL SOLID STATE RELAYS

Zero Crossover Switching (Synchronous Switching):

Elec-Trol Solid State Relays provide zero crossover switching. After the application of the input voltage, the power triac turns on at the next zero voltage crossover point of the AC load voltage. Upon removal of the input voltage the power triac turns off on the next zero current crossover point of the AC load current (see figure 1).

The benefits of zero crossover are such that all switching is done at zero voltage or current so there is a minimum of RF noise generated by the device. Also, capacitive, inductive and lamp loads do not have either high instantaneous inrush currents or high voltage kickbacks as would occur with random instantaneous on-off switching.

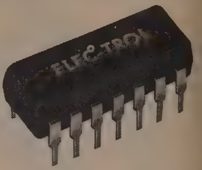
ELEC-TROL DIP REED RELAYS



General Description:

Elec-Trol DIP reed relays are epoxy encapsulated and furnished in the standard 14 pin dual inline package style capable of insertion in standard 14 pin DIP sockets or automatic insertion in P.C. boards. A complete line (not all shown here) of form A, B, and C Elec-Trol DIP reed relays are available with 8 or 14 terminals, with or without internal clamping diode across the coil and with optional electrostatic shielding and contact run-in. The internal lead frame serves as a magnetic shield. Temperature rating is −55°C to +85°C.

OPTIONAL FEATURES

Electrostatic Shielding:

Electrostatic shielding between the coil and reed switch contact may be specified by adding suffix -02 to the relay part number.

Contact Run-in:

The reed switch contact can be run-in for one million operations at low level load. To specify this run-in, change the last digit of the relay part number from 1 to 2.

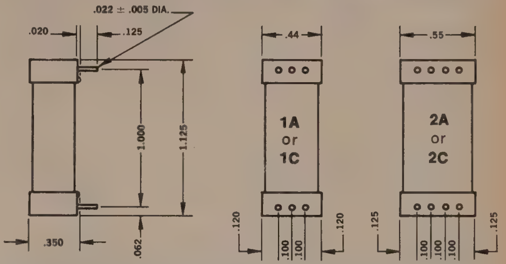
ELEC-TROL OPEN LINE REED RELAYS

General Description:

A complete line of Elec-Trol Open-Line Reed Relays (not all shown here) are available with greater numbers of contacts, .1″ and .15″ terminal spacing and with coil terminals at the same end or opposite ends of the relay. They are available with form A, B, and C dry reed contacts, and form A mercury wetted reed contacts.

OPTIONAL FEATURES



Shielding:
Magnetic shielding and/or electrostatic shielding (only in relays with E.S. designation) may be included as an option. To specify shield options, add suffix to part numbers as follows:

-01 Magnetic Shield
-02 Electrostatic Shields
-03 Both Magnetic and Electrostatic Shield

Contact Run-in:
The reed switch contact can be run-in for one million operations at low level load. To specify this run-in, change the last digit of the relay part number from 1 to 2.

TERMS: 1% 10 DAYS, NET 30 DAYS, F.O.B. SO. EL MONTE, CALIF.

HIGH RELIABILITY TESTED THRU 1,000,000 OPERATION RUN-IN ALSO AVAILABLE. CONSULT FACTORY FOR PRICES.

MAGNETIC SHIELD (Encapsulated Inside Package)
RECOMMENDED IN HIGH DENSITY PACKAGING TO REDUCE RELAY INTERACTION OR IN HIGH MAGNETIC FIELD ENVIRONMENTS.

ELECTROSTATIC SHIELDING
RECOMMENDED IN HIGH IMPEDANCE, LOW LEVEL APPLICATIONS WHERE LOW LEVEL NOISE PICK-UP IS UNDESIRABLE.

SILICONE TREATMENT
USED TO IMPROVE INSULATION RESISTANCE UNDER SEVERE ENVIRONMENT CONDITIONS.

* SHOCK AND VIBRATION ON LATCHING RELAY MUST BE DERATED 50%

SEE NEXT PAGE FOR PHYSICAL LAYOUT.

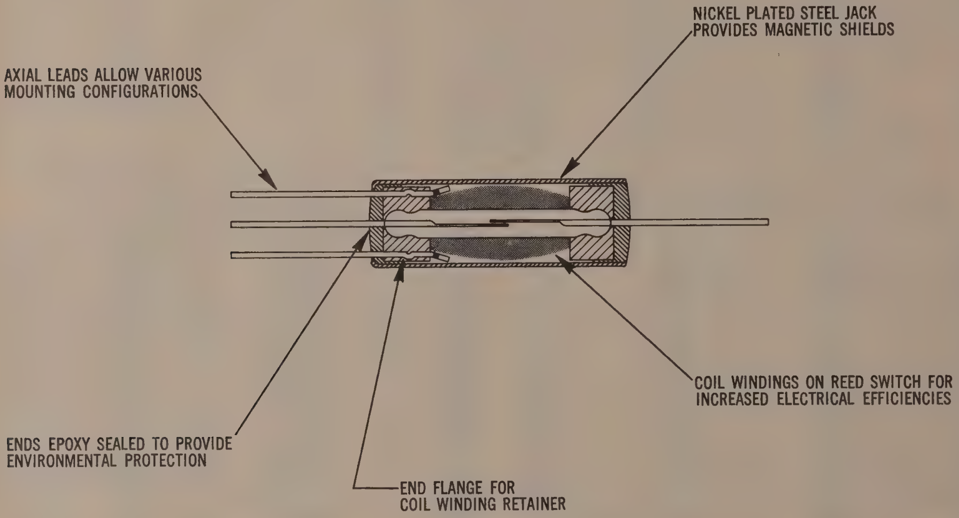
TUBULAR REED RELAYS
GENERAL INFORMATION

GENERAL DESCRIPTION

The tubular reed relay offers many design application advantages. Due to its unique package design, many of the electrical and physical characteristics of this reed relay are far superior when compared to standard reed relay configurations. One of the EAC advantages is our method of winding the coil directly on the reed switch capsule. This offers many improved electrical characteristics due to the increased efficiency. The result of this increased efficiency provides for very low typical contact resistance as well as generally faster operating speeds; the molded end flange allows for high volume production capabilities and is the real secret of the EAC tubular line; the epoxy end seals insure environmental protection; the nickel plated steel jacket (the outer protective shell) provides magnetic shielding as well as protects against mishandling in production; axial leads allow for various mounting configurations which PC board designers find desirable. Many added features such as plastic insulating sleeves, electrostatic shield and optional coil terminal locations make the tubular reed relay line one of the most versatile reed relay product lines in the industry today.



NICKEL PLATED STEEL JACK PROVIDES MAGNETIC SHIELDS
AXIAL LEADS ALLOW VARIOUS MOUNTING CONFIGURATIONS
COIL WINDINGS ON REED SWITCH FOR INCREASED ELECTRICAL EFFICIENCIES
ENDS EPOXY SEALED TO PROVIDE ENVIRONMENTAL PROTECTION
END FLANGE FOR COIL WINDING RETAINER

DIP Reed Relays Epoxy Molded

Form A and C Dry Reed

Now high-performance DIP reed relays available in low-cost Lead-Frame configuration. Offering extremely easy access, these superbly engineered relays are made to provide reliable, trouble-free operation at inexpensive prices.

- **Low Profile**
- **Automatic Insertion**
- **Improved Accessibility**
- **Driven Directly from TTL & DTL Logic**

Electronic instrument and Specialty Corporation is a leading producer of reed relays for industrial and commercial applications. EI&S Corp. assures highest quality and superior performance from all reed relays under the most demanding conditions.

DIP Reed Relays

- **Dry Reed**
- **Mercury Wetted**
- **Magnetically Shielded**

Featuring high performance in a compact, low profile package, these DIP reed relays can be driven directly from TTL and DTL circuits. Magnetic shielding is standard with this line. Careful engineering and manufacturing ensures stress free encapsulation.

General Purpose Reed Relays

- .15″ x 1.35″ Grid
- Dry Reed
- Magnetically Shielded
- Epoxy Encapsulated

These ruggedly reliable general purpose reed relays are designed for "workhorse" applications. Capable of handling 10 watts at ½ amp, they are widely used in industrial systems such as machine tool controls. Metal cases provide excellent magnetic shielding. Available in a wide variety of contact configuration. Stress free encapsulation is ensured by careful engineering and manufacturing.

ELECTRONIC INSTRUMENT & SPECIALTY CORP.

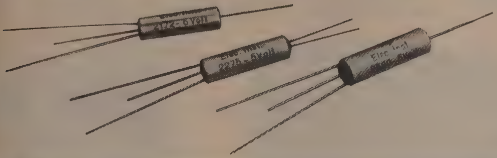
Axial Reed Relays

- Microminiature
- Dry Reed
- Mercury Wetted
- Magnetically Shielded



These **tiny** axial reed relays, available in dry reed or mercury wetted configurations, are fast to operate, take up a minimum of space, yet can carry a big load. Ideal for applications where low contact resistance, fast operation and long life in a midget packet are required.

SCHEMATICS/DIMENSIONS

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 5

GENERAL SPECIFICATIONS

Speed, Typical*	Operate Time (excluding bounce)	Release Time
Dry Reed, Form 1A	.2 to .5 ms	.1 ms
Dry Reed, Form 1C (N.O.)	.4 ms	.1 ms
Mercury Wetted, Form 1A	2 ms	2 ms

Insulation Resistance: Typically greater than 1 x 10^{12} ohms except Form C (1 x 10^{10})

Life Expectancy: 100 x 10^6 operations at low level; 10 x 10^6 at rated load, Mercury Wetted 10 X higher

Operate Temperature: 0°C to +65°C

Storage Temperature: −55°C to +85°C

*Consult factory for performance details.

OPTIONS

For Electrostatic Shield, add Suffix S

*Available RF switch (low resistive loss to 100 MHz).
**Available in dry reed contacts for 1000 VDC or 2000 VDC breakdown.
Prices subject to change without notice.

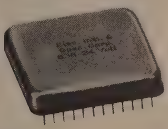
ORDERING INFORMATION
To order, specify Catalog Number, Coil Voltage and Optional Electrostatic Shield if required.

Example:	**2160S**	**12**	**S**
	Catalog Number	Coil Voltage	Electrostatic Shield

SPECIAL PURPOSE RELAYS

Electronic Instrument has produced a wide assortment of tailored relays beyond its standard lines. Some of these styles are shown below and are available with almost off-the-shelf delivery. If your requirement is not a standard, send us your specifications and let us prove our capability to produce **the** relay for **your** application at economical prices.

MULTIPLE FLAT PACK

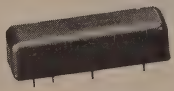


Relay designed to permit 0.5 inch PC board stacking; will insert easily in standard contact strip.

VRM (MERCURY-WETTED VERTICAL)

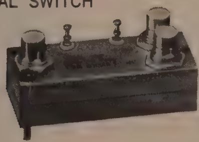
Solution to problems encountered when printed circuit boards must be mounted horizontally — yet require stable contact resistance with no bounce.

HIGH TEMPERATURE



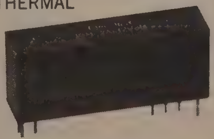
A wide selection of high temperature relays capable of operating up to 150°C are available.

COAXIAL SWITCH



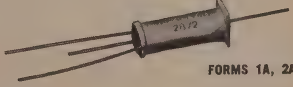
Fast switching, low power to operate and miniature size are several outstanding features offered in this series.

LOW THERMAL



This relay illustrates one of many low thermal relays available. Differential thermals as low as 2 microvolts.

LOW COST



FORMS 1A, 2A, 1B

Axial Leads
Size: ⅜ dia. x ⅞ long (bobbin) **Form 1A only**
Rating: ½ amp., 200 VDC, 10 watts

U.L./C.S.A. FILE NUMBERS

When requiring U.L. and/or C.S.A. approval, refer to the file number which will save you time and money. Approval is simplified when product includes components having prior approvals. Regulations then require that a component be checked only for the application within its approved ratings. If a component does not have prior approval — the component must undergo complete testing to determine if it meets U.L. requirements. This entails added expense and time. The following A.C. Controls have U.L. and C.S.A. recognition.

RBM Type	*U.L. Recognition File #	*C.S.A. Recognition File #
75	E12139	LR13360
84	E12139 or E22381	LR13360
84 & 184	E12139	LR13360
91	E12139	LR13360
192	E12139	LR13360

RBM Type	*U.L. Recognition File #	*C.S.A. Recognition File #
93	E12139	LR13360-31
129, 129AR	E12139	LR13360
143	E12139	LR13360-36
154	E12139	LR13360
175	E33034	LR13360-32

* U.L. and C.S.A. listing covers RBM production part number stamped on relay. Production part number (not standard catalog part number) should be submitted with file number. RBM will supply report date when required. CONSULT FACTORY FOR POSSIBLE U.L. AND C.S.A. RECOGNITION FOR OTHER THAN ABOVE.

ANNOUNCING A CHANGE IN BRAND NAME

RBM has long been a familiar brand name for electrical contactors and relays in the OEM and Distributor markets and is identified with the Controls Division of Essex International, Incorporated. They will continue to make custom components for the OEM market but the stock catalog line of RBM products will now be sold under the familiar trade name STANCOR as part of the ESSEX marketing system for standard catalog items available from stock.

STANCOR contactors and relays are available through a select group of distributors located from coast to coast and covering all major marketing areas.

Contact STANCOR-CHICAGO for any additional information not shown in the catalog listings.

GUARANTEE THE COMPANY MAKES NO WARRANTY CONCERNING THE UTILITY OR FITNESS OF THE PRODUCTS FOR THE PURCHASER'S PURPOSE NOR ANY OTHER WARRANTY, EXPRESS OR IMPLIED. Defective material will be repaired or replaced for a period of one year from date of shipment unless otherwise stated. This repair or replacement will be made from our factory on material proving defective. We do not assume any expense or liability for repairs to our apparatus made outside our own factories, without written consent. In no case will our responsibility extend to apparatus not made by us. The Company is not responsible for damage to apparatus through improper installation or through attempts to operate it above its rated capacity, intentional or otherwise. Under no circumstances shall the Company be liable for loss of profits or other special damages.

* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.

§ Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.

† Load tests — making inrush ratings (0.4 to 0.5 P.F.) — breaking 125% continuous rating (0.65 to 0.8 P.F.).

‡ Cross-bar contacts.

The Type 93 relays are used in vending machines, heating, air conditioning, business machines, control panels, appliances, data processing equipment, office machines, communications systems and instruments.

The coil bobbin and contact terminal block are molded plastic and is resistant to arc tracking. The contact terminal allows - (a) easy insertion and removal of connectors, (b) stresses caused by wiring hook-up cannot change relay adjustment. The contact springs are molded as an integral assembly and gives excellent stability in all environmental conditions. The armature contact springs are connected to the terminals by flexible insulated leads welded to the terminals. Connections for the contacts and coil are located on the front of the relay.

Solder terminal type has combined front, single hole screw and stud mounting. Printed*circuit type may be controlled by SCR if firing angle is no more than 10 degrees.

The plug-in relay has high impact case and standard pin connections.

Quick connect type designed for front mounting or polarized socket mounting. Use 93-185-1 socket kit. Relay has .20 x .187 terminals. UL & CSA recognized under Component Recognition Program: Hardware included with relays in boxed units only.

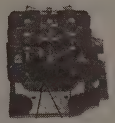
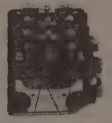
CONVERSIONS INSTRUCTIONS

All 10 and 15 ampere contact assemblies on standard type C contactors are normally open. To convert to normally closed, use screwdriver. No special parts needed.

1. Remove movable contact assembly and lock washer by backing off terminal nut "A".
2. Loosen screws "B" and remove stationary contact assemblies.
3. Invert movable contact assembly, and replace on contactor with flat "I" spring resting on contact block. Contacts facing out.
4. Remove screws "B" from, and reinsert into opposite end of, stationary contact assembly. Re-install stationary contact assemblies; holding contacts in alignment with movable contacts while tightening screws.



Normally Open



Normally Closed

- Max. Pick-Up 70% rated coil voltage.
- Design Ambient −40°C to +65°C
- Maximum Continuous coil watts: 12 @ rated voltage.
- Recommended Mounting Position: Unit in vertical plane with coil terminals up. Horizontal plane is acceptable.
- Design meets U.L. 583 Industrial Truck Standard. Dust and splash proof cover.
- Application: Controlling D.C. starting motors on gasoline engine driven auxiliaries. Battery charging power circuits, motor reversing circuits as found in winch applications.
- The 124 is also applicable where ruggedness and high current capacity is required for D.C. mobile equipment; such as: in-plant lifts, industrial equipment, recreational vehicles - golf carts, camp trailers, motor homes.

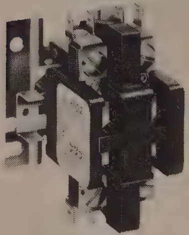
ELMWOOD SENSORS

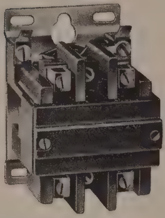
DEFINITE PURPOSE CONTACTORS

20-25-30-40 Ampere — 600 Volts — Full Load

20-30-35-40-50 Ampere — 600 Volts — Resistive Per Pole



25 Amp. Res.
20 Amp. F.L.
2 Pole
AO Series



50 Amp. Res.
40 Amp F.L.
2 Pole
FO Series

- Interchangeable Mounting
- Small Size
- Low Coil Inrush VA
- Straight-Through Wiring

CONSTRUCTION DESIGN

Base, hood, and carrier are of molded melamine-phenolic, which provides superior arc suppression. Contacts are of a silver-cadmium oxide and are field replaceable.

Holding coils insure clean pickup at 80% of lower voltage, and satisfactory performance at 110% of higher voltage. A variety of modifications is available.

Specify coil voltage and frequency.

All contactors are for two-wire control.

Auxiliary pole has screw terminals on power pole contact set.

U.L. File E 42105

C.S.A. File 21048

DO, EO and FO Series also available with S.P.D.T. side-mounted auxiliary switch, rated 10 Amps, 250 Volts max. 3-lead D.C. coils and dual-voltage A.C. coils are available.

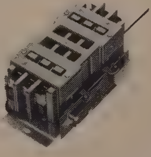
NEW REVERSING CONTACTOR



Ideal for doors, hoists, valves, elevators . . . wherever reversing operation is needed. Elmwood's 2 or 3 pole 20 amp Reversing Contactor, with mechanical interlock, and optional electrical interlock, to prevent simultaneous closure of both contactors. One hp single-phase or 2 hp three-phase models, for 120, 240 or 440-550 volt operation. U.L. and C.S.A. listed. Only 2.9″ x 5.9″ x 3.3″

For contactors or motor starters with higher ratings or special features not included above, please contact factory.

NOTATIONS: Electrical ratings, life cycles and performance characteristics have been established after testing and review of standard operating conditions. The specifications outlined in this bulletin suggest the performance characteristics when the units are subject to these standard conditions. To assure that our laboratory test conditions duplicate the performance requirements for the application, all contactors should be tested for each application. For specials which are not specified or standard, please consult the factory. Warranty is limited as provided in Elmwood Sensors Inc. standard terms of sale.

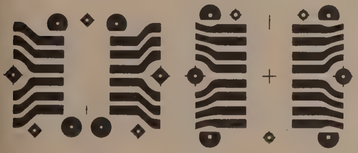
BEAD PIN PC BOARD HEADER

PRINTACT
RELAY
PART NO.
12 BW36

For applications where the conductor pattern is not etched on your custom printed circuit board, the bead pin header has been designed for use as a solder-in socket: P/N 40300-1 (Rhodium), P/N 40300-2 (Gold).

FREE PC BOARD DESIGN AIDS

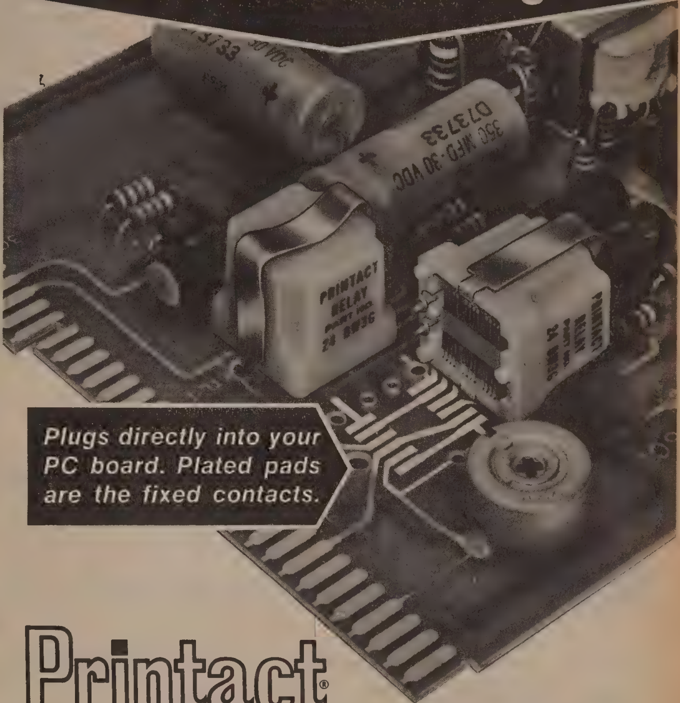


Send for Technical Notes PR262-D which details artwork, layout and board processing procedures and offers stick-on conductor patterns to overlay on the mylar providing switching configuration layouts for relay areas.

GENERAL PURPOSE MODULES

Where a custom board is not planned, send for catalog illustrating a variety of general purpose PC boards with etched and plated switching patterns to accommodate single or multiple relays. Can be chassis mounted with standoff bushings or bead pins. Solder pads for point-to-point wiring or edge-connector terminals are available.

PRINTED CIRCUIT RELAYS
Without Socket or Soldering



Plugs directly into your PC board. Plated pads are the fixed contacts.

Printact®
MAGNETIC LATCHING AND NON-LATCHING RELAYS

Fully utilizing printed circuit technology Printact provides custom features. This compact low cost general purpose relay can be used in RF, Thermocouple and other specialized circuitry. The pivoting contact armature, hinged to a permanent magnet, is the only moving part. Elimination of pigtails, return springs, and mechanical inter-connections assures long life and reliability for millions of cycles.

Relays with 6, 12, or 24 Vdc 500 mw coils have 2, 3, or 4 double break contact blades. Each blade can switch a form C or A *and* B in separate circuits, up to 2 amps. These small lightweight highly reliable Printact relays can save you space, time, money and manhours.

General purpose PC Boards for point-to-point wiring or solder-in mounting for multi-pole switching, cost less than plug-in sockets.

For a sample and catalog NOW write direct or call (212) EX 2-4800 for specs, design aids, and cost data on relays and PC boards.

Inherent Custom Features:

- **Low Thermal EMF**
  Less than 2 micro-volts
- **Cross Talk Isolation**
  70-50 db. over 50-500 Mhz
- **Characteristic Impedance**
  75 ohms PC board pads
- **Low Contact Bounce**
  Less than 0.5 ms
- **Bifurcated Blades**
  Contact resistance stability
- **Encapsulated Coil**
  Corrosion protection
- **Switching Versatility**
  Blade functions as 2 poles
- **Plug-In Replacement**
  Without solder or socket

HERMETICALLY SEALED RELAYS

Unmatched for reliability, the light weight, thermal capabilities, and high resistance to shock of these hermetically sealed relays make them ideally suited for military and industrial electronic applications.

The reliability factor stems from exacting assembly (in a "White Room" where necessary), rigid quality control, well-equipped lab facilities and precise testing procedures. These manufacturing techniques, combined with GE's advanced engineering design, produce top-quality relays with dependable characteristics exceeding those of static switching devices.

Contact resistance is held to a minimum by silver contacts (with gold flash) combined with high contact forces.

All high-temperature components allow the operation of these relays in ambient temperatures between −65°C to +125°C.

Units are available with studs or brackets for mounting. All types available for printed-circuit board application. Headers can be furnished with solder hooks, three-inch leads, plug-in (with socket availability information) and many special terminals.

GENERAL ELECTRIC

TYPE 3SAV RADIO FREQUENCY RELAY

FEATURES

- All features of the standard 3SAV relay
- Micro strip or stripline models available
- 50 ohm RG 316U coaxial cable is standard
- Easy access to PC boards
- Form A, B, C and D models available
- Higher RF power switching models are available
- 100 million operation models are available
- Meets requirements of MIL-R-39016/33

DESCRIPTION

The 3SAV Radio Frequency Relay is a high integrity RF version of the military half-size relay. Excellent cable to relay RF matching is provided by a strong attachment feature. It will perform well in transmission lines from 25 to 75 ohms up to 500 megahertz. RF and auxiliary contacts provide low contact resistance for millions of trouble-free operations in radio and test equipment applications. Long life stability in dry, low level and power switching makes this little relay a big item for you to consider.

SPECIFICATIONS

RF contacts — up to 500 MHz
Dry switching to 100 watts — 1,000,000 oper.
Hot switching to 10 watts — 1,000,000 oper.
Hot switching to 40 watts — 100,000 oper.

All contacts — up to 100,000 operations
2.0 amps — 28 VDC Res.
0.5 amps — 28 VDC Ind.
1.0 amps — 115 VAC Res. — ungrounded case
0.15 amps — 115 VAC Res. — case grounded
0.10 amps — 1 VDC low level — 1,000,000 oper.

Contact Resistance — .050 ohms max. at header

Operate Time — 4 ms. max.

Release Time — 4 ms. max.

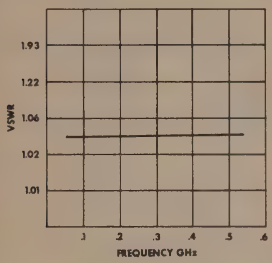
Insulation Res. — 1000 megohms min.

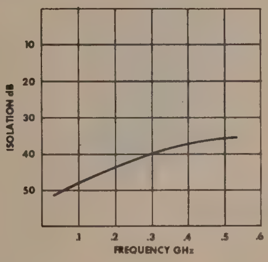
Dielectric Strength — 1000 VAC
Except: Contact gap — 500 VAC
Coil to case — 500 VAC

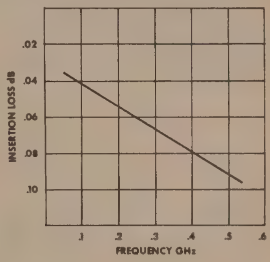
Ambient Temperature — −65°C to +125°C

RF RESPONSE DATA

Values shown are typical for both normally open and normally closed contacts. Measurements are pin to pin at glass (does not include cables).







NOTE: Typical Cable Attenuation = 0.2 dB/ft @ 400 MHz

PRODUCT CATALOG

DISTRIBUTION . . .
The key to customer service

The nationwide network of Allied Franchised Distributors offers specifiers of Gould-Allied products faster application information, specification data and of course, local off-the-shelf deliveries. But of greater importance is a staff of some 700 distributor salesmen who are well versed in the Allied product line and eager to serve.

Distributors and distributor salesmen are, in turn, supported by The Gould-Allied plant with engineering expertise, detailed product data, current price information and new product development.

In addition to nationwide distribution, Gould-Allied also enjoys representation and distribution on every continent. The world-wide acceptance of the name Gould-Allied is evidence of product quality, aggressive service policies and the fulfillment of market needs through new product introduction.

The products covered in this catalog are listed below.

CRADLE® SERIES RELAYS

T154/T163 industrial relays with versatile mounting means including solder, printed circuit board and socket options. (Refer to Socket Guide) Sensitivity selection to match applications ranging from 20 to 140mW per pole. Contact selection to meet load switching requirements. U/L Recognized File #E206041.

Voltage relays adjusted for maximum pickup of 75% of nominal coil voltage.
Weight: 1.0 to 6.0 ounces.

CRADLE® SERIES/MAGNETIC LATCH RELAYS

T351/T362 Bi-Stable and Magnetic Latch industrial relays. Single or Dual Coil construction. Versatile mounting means, including solder, printed circuit board and socket options. (Refer to Socket Guide). Contact selection to meet Load Switching Requirements. **T351** has single point contacts. The **T362** has bifurcated contacts. Dimensions and appearance are same as for 2C and 4C cradle relays, see page 1.1686

Input voltage: standard 12 and 24 VDC. Other voltages available on request.

U/L Recognized File #E-206041

Weight: 1.5 to 4.0 ounces.

MILITARY RELAYS/CRYSTAL CAN

CRYSTAL CAN/SERIES WKJ/WKY

High performance military crystal can relay. Bifurcated contacts make relay ideal for dry circuit loads up to 3 amperes. All welded construction provides for maximum protection against contamination and increases reliability. MIL-R-5757/10 as applicable. WKY has a slightly different header arrangement than WKJ, see illustration.

Note: **Bold Type** indicates relays normally stocked by all Gould-Allied Control franchised distributors.

SENSITIVE, LONG CRYSTAL CAN/SERIES WJS

High performance and current sensitive military crystal can relay. SPDT (WJS-3D) operate sensitivity 22mW. DPDT (WJS-6D) operate sensitivity 40mW.

Bifurcated contacts make relay ideal for dry circuit loads up to 3 amperes. All welded construction provides for maximum protection against contamination and increases reliability. MIL-R-5757/13 as applicable.

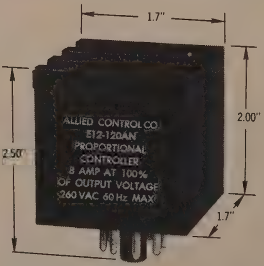
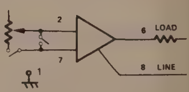
SOLID STATE PRODUCTS

PROPORTIONAL CONTROLLER—SERIES E12

Type E12 solid state proportional controllers control loads up to 8 amperes. When terminal pins 2 and 7 of the octal plug connector are shorted, the unit provides 100% output voltage. When a resistance is substituted for the short the unit will provide as low as 10% full output voltage. By varying the resistance, the output voltage can be varied from 10% to 100% of the full line voltage. This is especially useful for dimming lamps, controlling heaters, and controlling motor speeds.

Built-in transient capability and thermal conductive epoxy encapsulation make Type E12 controllers ideal for use in adverse industrial environments. High current inrush capability permits control of either inductive or resistive loads without derating. No heat sinking is required when the unit is used with specified ratings.





Wiring Diagram

Maximum resistance across Pins 2 & 7 for minimum output
120V line, 250K, ½ watt
240V line, 500K, ½ watt

Catalog Number E12-120AN
Max. Load Current .... 8 Amp
Output Voltage .... 260 VAC
List Price $21.20

MINIATURE PRINTED CIRCUIT RELAYS—SERIES MPC

MPC-SERIES features low profile high density packaging with unique hingeless armature for longlife, gold plated silver contacts for switching low level up to 2 amperes (50 watts maximum per pole). Interlocking housing provides maximum protection from contamination and increases reliability. Available in 1, 2 and 4 pole configurations.

Relays are adjusted for:

Pickup—Maximum—75% of Nominal Coil Voltage.

Drop-out—Minimum—10% of pickup maximum.

Maximum Power Dissipation 1.3 watts at 25°C.

Weight 8 to 11 grams.

INPUT

The TD10 utilizes the service proved T154 Cradle® relay with a solid state timing circuit to provide timing from 0.1 to 100 seconds with + 2% repeat accuracy. (Up to 300 seconds on special order).

Available as "time delay to make" or "interval" timing models with optional operating and mounting features.

Catalog Number	Time Range (in seconds)	Input Volt	List Price
INTERVAL			
TD10NA-2C-12DNB	0.1 to 10	12VDC	$21.80
TD10NA-2C-24DNB	0.1 to 10	24VDC	21 80

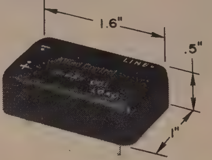
SOLID STATE PRODUCTS/SOLID STATE RELAYS

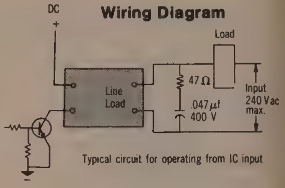
PRINTED CIRCUIT, 4 AMP, SINGLE POLE—SERIES E22

Type E22 miniature solid state relays are full-wave power switches which control either resistive or inductive ac loads up to 4 amperes. They control over the **full** wave cycle, beginning one-half cycle after initial turn-on. When input is removed, the relay de-energizes the load when the current crosses zero. These features virtually eliminate electrical noise, and make the relay ideal for use on computer logic circuit boards having low noise immunity. A toroidal transformer isolates input and output, thereby eliminating interfacing problems. DC input relay models are reverse polarity protected as well.

The solid state circuitry using the most advanced silicon devices, is enclosed in a thermal-conductive epoxy filled aluminum housing. This complete encapsulation permits direct use in explosive or otherwise hostile atmospheres.



Wiring Diagram



Typical circuit for operating from IC input

Input Voltage	Catalog Number	Output
DC		
3-7VDC 7-15VDC 15-30VDC	E22-1201N E22-1202N E22-1203N	260VAC 4 Amp 50-60 Hz

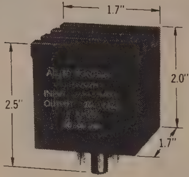
List Price $16.60

PLUG-IN 8 AMP, SINGLE POLE—SERIES E11

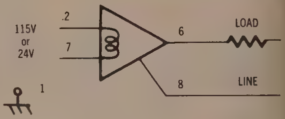
Type E11 solid state relays are full-wave power switches which control either resistive or inductive ac loads up to 8 amperes. They control over the **full** wave cycle, beginning one-half cycle after initial turn-on. When input is removed, the relay de-energizes the load when the current crosses zero. These features virtually eliminate electrical noise.

Electrical isolation of the input from the output provides inherent immunity against noise from the load side. This, coupled with the ability to withstand transients as high as 100 amps makes Type E11 relays ideal for adverse industrial applications especially those where long life and high switching rates are required.

The solid state circuitry using the most advanced silicon devices, is enclosed in a thermal-conductive epoxy filled aluminum housing. This complete encapsulation permits direct use in explosive or otherwise hostile atmospheres. Reverse polarity protection is another feature of Type E11 dc input relays. They are especially suited for switching motors, solenoids or incandescent lamps.



Wiring Diagram



Input Voltage		Catalog Number	Output
AC	DC		
	3-7VDC	E11-1201N	260VAC
	7-15VDC	E11-1202N	3 Amp
	15-30VDC	E11-1203N	50-60 Hz
20-28VAC		E11-1200N	
100-135VAC		E11-1204N	
200-260VAC		E11-1206N	

List Price $22.60

PANEL MOUNT 15/24 AMP, SINGLE POLE—SERIES E19/E20

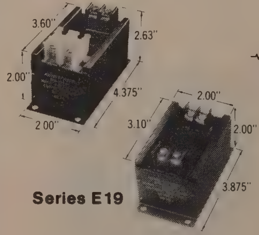
Type E19 and E20 solid state relays are full-wave power switches which control either resistive or inductive ac loads up to 24 amperes. They control over the **full** wave cycle, beginning one-half cycle after initial turn-on. When input is removed, the relay de-energizes the load when the current crosses zero. These features virtually eliminate electrical noise.

Electrical isolation of the input from the output provides inherent immunity against noise from the load side. This, coupled with protection against voltage transients make Types E19 and E20 relays ideal for adverse industrial applications especially those where long life and high switching rates are required.

The solid state circuitry using the most advanced silicon devices, is enclosed in a thermal-conductive epoxy filled aluminum housing. This complete encapsulation permits direct use in explosive or otherwise hostile atmospheres. The relay's high current inrush capabilities enable it to control loads of any power factor and all dc input models are reverse polarity protected as well. An added benefit of Types E19 and E20 relays is their modular construction which permits simple field replacement or modification when used in multiple switching circuits.

Types E19 and E20 relays are particularly suited to heavy duty industrial applications which require long life and high switching rates. For switching heavy duty solenoids, for example, they can replace 150A and 350A rated electromechanical relays respectively.

Series E20



Series E19

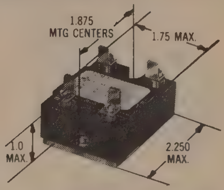
SOLID STATE PRODUCTS/SOLID STATE RELAYS

OPTO ISOLATED POWER RELAYS—SERIES E-3



This new line of solid state relays offer the following advanced design concepts for flexible application.

ZERO VOLTAGE SWITCHING—All Series E-3 Power Relays are designed for True Zero Voltage switching. Power is applied to load at zero-voltage cross-over. Power is removed from load at zero-current cross-over.

HIGH NOISE IMMUNITY—Gould—Allied Control has virtually eliminated misfiring due to RFI transients. Our testing shows the Series E-3 Power Relay to be superior to competitive units under identical test conditions.

HIGH IN-RUSH CAPABILITIES—The Series E-3 Solid State Power Relay has been tested to and is guaranteed to meet in-rush loads of 1000% of rated current.

PHOTO-ISOLATED—Input-Output circuitry is isolated by the use of latest state of the art technology. The use of light emitting diode and the photo detector provide circuit isolation of 1560 VAC.

INTEGRATED CIRCUIT COMPATABLE—The Series E-3 Solid State Relay operates directly from and is compatable with the computer age integrated technology allowing a wide range of design applications.

SIGNAL VERSATILITY—The Series E-3 Solid State Power Relay is available in three input signal models allowing wide versatility in application selection.

ONE MODEL FOR ALL OUTPUT VOLTAGES—One model of the Series E-3 Solid State Relay is used to cover all commonly used voltages providing the user with a single model inventory in commercial applications. (Output voltage: 80 to 280 VAC, 47-63 Hz).

MINIATURE, ENCAPSULATED, PRINTED CIRCUIT SOLID STATE RELAY—SERIES E4

The E4 Solid State relay has been designed to interface with integrated logic circuit outputs. As an input-output device used for inductive motor loads it is ideally suited for Point of Sale equipment.

The Series E4 Solid State Relay is torroidal isolated and has been isolation tested to 1560 volts by Underwriters Laboratories.

UL Approved—File No. E57093.

SOLID STATE RELAYS

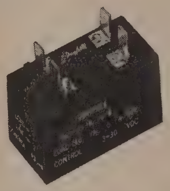
TWO BASIC CONTROL TYPES AVAILABLE

DC CONTROL OF AC LOAD — OPTICALLY ISOLATED
TRANSFORMER ISOLATED
HYBRID (REED RELAY ISOLATED)

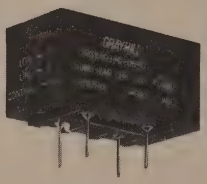
DIRECT CONTROL (NON-ISOLATED) — AC TYPE
DC TYPE

- LOAD SWITCHING BY SOLID STATE DEVICE ELIMINATES CONTACT DETERIORATION
- EXTREMELY LONG LIFE, VIRTUALLY ELIMINATES REPLACEMENT
- MANY TYPES DIRECTLY COMPATIBLE WITH LOGIC CIRCUITS
- DESIGNED-IN TRANSIENT AND OVER-VOLTAGE PROTECTION
- RELIABLE SWITCHING OF INDUCTIVE LOADS
- SUPERIOR HEAT TRANSFER CHARACTERISTICS PROVIDES SMALL SIZE PER AMPERAGE CAPACITY
- ZERO VOLTAGE TURN-ON DESIGNED-IN OR OPTIONAL

PACKAGE CHOICES



PACKAGE "B"
APPROX. 2.1" x 1.1" x 1.4"



PACKAGE "C"
PC MOUNT — 6 AMP MAX.
APPROX. 2.1" x 1.1" x 1.4"

OPTICALLY (LED) ISOLATED SOLID STATE RELAYS DC CONTROL OF AC LOADS

- DIRECTLY COMPATIBLE WITH LOGIC CIRCUITRY
- NO EXTERNAL DRIVE OR CURRENT LIMITING CIRCUITRY REQUIRED
- SWITCHES 0.25 TO 15 AMP LOAD CURRENT
- ZERO VOLTAGE TURN-ON DESIGNED-IN

Control Voltage	Load Voltage	Load Current	Zero Voltage Turn-On	Package Type	Part Number
3-30 VDC	50-140 VAC	.250 to 6A	Yes	B	70S2-03-B-06-B

OVER 100,000 STRONG

Every month over 100,000 buyers and specifiers like yourself receive Electronic Products Magazine . . . that makes us the largest electronics magazine around. And we're the largest for a darn good reason . . . we give you what you need: a practical editorial approach . . . one that's application and new product oriented. Editorial that offers solutions to the problems you face in your everyday task of designing and building electronic systems and subassemblies. The type of information you can put to use now.

If you're not getting EPM . . . why not write our circulation manager for a qualification form and join the over 100,000 strong.

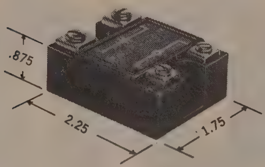
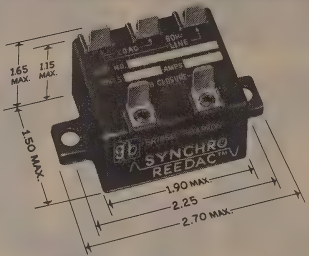
reedac™ relays

OUR OPERATION OFFERS A COMPLETE LINE OF HYBRID AND ALL SOLID STATE RELAYS. FOR MORE DETAILED TECHNICAL INFORMATION, CONTACT YOUR LOCAL GORDOS SALES REPRESENTATIVE.

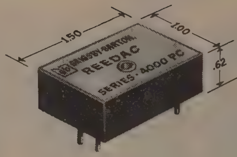
Basic Package Dimensions



GB15000 SERIES



GB2000, 5000, 9000, 12000 SERIES



GB4000

DESCRIPTION		LOAD VOLTAGE AC	LOAD CURRENT AMPS 60 Hz	INPUT VDC
	**GB2000 Series Reedac** — A random turn-on hybrid relay. Clamp diode available on reed relay input. Optional suppression networks for inductive loads and line transient protection of triac. Low cost. UL recognized.	24-240	10, 25	5 (TTL) 12 24 switch closure
	**GB4000 Series Miniature Reedac** — Designed for medium power loads. Random turn-on hybrid relay. RC network and clamp diode options. UL recognized.	24-240	1.5	5 (TTL) 12 24 switch closure
	**GB5000 Series Phase Controller** — Solid state diac-triac combination for motor speed and heater control external potentiometer input required.	120-240	10, 25	Potentiometer
	**GB9000 Series Synchro-Reedac** — 4 terminal zero voltage switching hybrid relay. Reduces inrush, minimizes RFI. Options available for inductive load and line transient protection of triac. UL recognized.	24-240	10, 25	5 (TTL) 12 24 switch closure
	**GB12000 Series** — All solid state voltage switching relay. Photo-coupled input. With line transient protection option not available in other true solid state relays. UL recognized.	24-240	10, 25	3-32
	**GB15000 Series** — Solid state zero voltage switching relay photo-coupled input. RC protection on output standard 1500 VAC isolation. Epoxy molded package. UL recognized.	24-240	5, 10, 15, 25	3-32
	**GB18000 Series** — Solid state relay. Photo-coupled input, zero voltage switching. Molded package with PC or quick connect terminal option. Screw down mounting.	24-240	.3, 1.5	3-32

GORDOS CORPORATION

series 83 8-pin standard DIP reed relays

- Standard TO-116 terminal grid fits all standard DIP sockets.
- Interface directly with RTL, DTL, TTL, HTL logic.
- Molded epoxy package for environmental immunity; auto-insertion-compatible.
- Series 82 14-pins optional

UNIT	DC		AMPS	AMPS	OHMS	VDC	VDC	pF	pF	OHMS	MILLIONS OF OPERATIONS		

[1] Measured with nominal coil voltage applied (except Form B); 12VDC 100 MA applied to contacts, switched wet.

[2] With relay contacts closed value is 3.5pF.

[3] End of life is defined as failure to make or break within specified limits or contact resistance exceeding 2½% of the load resistance or impedance. Values shown are for resistive loads runs at 25°C with 50% duty cycle. Relay life is reduced at elevated temperature. Contact protection must be provided on inductive or high inrush current loads.

OPERATING CHARACTERISTICS

Operate Time, Including Bounce Form A and Form B	0.5 MS Max.
Form C	1.5 MS Max.
Release Time, Coil unsupressed Form A and Form B	0.35 MS Max.
Coil Supressed Form A and Form B	0.45 MS Max.
Coil unsupressed Form C	1.50 MS Max.
Coil Supressed Form C	1.70 MS Max.

Note: Release time for Form B and Form C includes bounce.

ENVIRONMENTAL CHARACTERISTICS

Temperature, Operating	–40°C-+ 85°C
Storage	–55°C-+125°C

Shock, 100G, 8Ms±1 Ms; ½ sine wave.

Vibration, 10-2000Hz. 20G or .125 in. displacement, whichever is less.

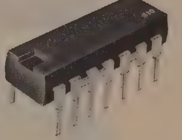
DIP reed relays

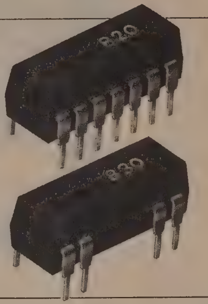
810 Series/T0116 Case

Compatible mechanically with all standard DIP-IC packages and conforming to JEDEC T0116 specifications. They mate with conmentional 14-pin receptacles, as well as fit automatic insertion equipment. **Models listed:** Consult factory for characteristics.



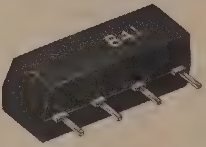
830 Series

830 models have standard 8 pin configuration, and 820 14 pins. Package height of .275 allows use of standard miniature switches and larger coils to increase sensitivity, current-carrying capability, and contact rating, as well as reduce cost. Can be automatically inserted. **Models listed:** 821A, 831A, 822A, 832A, 821B, 831B, 821C, 831C, 825C, 835C.



841 Series

These edge-mounted IC relays are designed for ultra high-density assemblies. They can also be used to "double up" by inserting them side by side in standard DIP sockets. **Models listed:** 841A, 841B.



851 Series

These four terminal relays are designed for high-density IC assemblies. Staggered terminals (see drawing) permit tightest possible spacing. 1500 VAC minimum installation breakdown between coil and switch. **Models listed:** 851A, 851B.

OPTO-ISOLATED SOLID STATE RELAY

The technology that made Hamlin the leading manufacturer of reed switches and reed switch devices has developed an entirely new Opto-Isolated Solid State AC Relay. The circuit design is unique enabling us to lower the "zero" level switching. Our turn on voltage is about as low as possible in the AC cycle. Our window has been established as 4-10V with a threshold voltage of 4V. It is this that makes for noise-free operation. Input voltage 3-32 Vdc. Input/output isolation is 1500 Vac, maximum turn-on and turn-off time is 8.5 msec. A molded package protects the unit against vibration, shock, oils, chemicals, etc. It measures only 1.75 x 2.25 x .875 inches.

Model	AC Line Voltage 47 to 63 Hz	Peak Repetitive Blocking Voltage, Max.	Load Current Max.‡	One Cycle Surge (60 Hz), Max.	List Price Quant. 1-9
7521	120 Vac (24-140 Vac)†	200 Volts	10 amps RMS	100 amps	15.95
7522	240 Vac (24-280 Vac)†	400 Volts	10 amps RMS	100 amps	17.55
7523	240 Vac (24-280 Vac)†	400 Volts*	10 amps RMS	100 amps	21.60
7531	120 Vac (24-140 Vac)†	200 Volts	25 amps RMS	100 amps	20.80
7532	240 Vac (24-280 Vac)†	400 Volts	25 amps RMS	100 amps	22.80
7533	240 Vac (24-280 Vac)†	400 Volts*	25 amps RMS	100 amps	32.85
7551	120 Vac (24-140 Vac)†	200 Volts	40 amps RMS	100 amps	26.95
7552	240 Vac (24-280 Vac)†	400 Volts	40 amps RMS	100 amps	29.10
7553	240 Vac (24-280 Vac)†	400 Volts*	40 amps RMS	100 amps	38.00

* 600V Peak Overvoltage Blocking for up to 5 sec. max. Time between overvoltage applications must be at least 10 times as long as the overvoltage duration.
† Low voltage operation results in some waveform distortion.
‡ At 40°C — derated at higher temperature.

The new Hamlin units are interchangeable with any of the following:

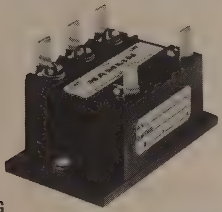
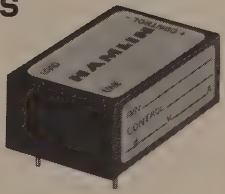
SOLID STATE AC RELAYS U.L. RECOGNIZED*

MODEL 700 FOR LOADS UP TO 6 AND 12 AMPS
MODEL 701 FOR PRINTED CIRCUIT BOARDS

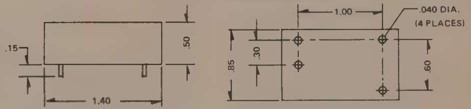




ON/OFF OR ZERO VOLTAGE SWITCHING

The 700 Series is a "family" of rapid response self-contained hybrid solid state AC Relays (HSSRs) designed for switching loads up to 12 amps. Completely self-contained, these relays insure protection against contamination, moisture, vibration and shock. They are capable of controlling inductive, capacitive, hi-inrush or resistive loads. These relays provide reliable, arcless, bounceless, maintenance-free switching with an expected life in excess of 100 million operations. Available in either on/off or zero voltage switching models. For further information please contact your local Hamlin representative.

HAMLIN SOLID STATE AC RELAYS



Model 701 is a hybrid solid state AC relay (HSSR) rated at 1.5 amps and designed for PCB mounting on an industry standard 0.100 grid. This relay comes complete with internal RC network for commutating dv/dt compensation to insure compatability with inductive loads.

TECHNICAL INFORMATION

INTRODUCTION

The Magnetec "G" Series, referred to as "The Interchangeables", represents selected solenoids found to be widely accepted for use in numerous applications in industry today. Important mechanical characteristics such as configuration, size and mounting have been maintained and constructional features are state-of-the-art. The optimized designs provide the ultimate in performance.

"The Interchangeables" provide the following.

- Four standard coil voltage ratings.
- Three standard wattage ratings providing four standard duty cycles.
- Choice of two plunger clevis options.
- Push type available on all models.
- Switch types available as standard.

DESIGN FEATURES

A. MAGNETIC CIRCUIT — High permeability materials are used in all magnetic circuit paths to maximize the efficiency of the solenoid for a given work function. Minimized air gaps thru the use of a welded end plate, rather than the normal staked on type, further capitalizes on the high flux density potential of the magnetic materials.

B. BEARING LIFE — The bearing surface is glass filled nylon which in combination with the surface finish of the plunger provides excellent life characteristics. The natural lubricity of the nylon results in very low sliding friction. Three channels are incorporated in the nylon bearing to relieve air compression in the plunger cavity to minimize response time.

C. CONCENTRICITY OF PLUNGER AND STOP — The mechanics of the solenoid have been carefully designed to insure seating of the plunger in the stop. The end position of the stroke is therefore accurately defined and the holding force predictably constant. When the alignment of these parts is not accurately held, "double-seating" occurs in which the plunger completes its stroke in less than intimate contact with the stop. Close tolerance machined parts are used in a self-jigging configuration to minimize this problem.

D. COIL CONSTRUCTION — The "G" Series coils are wound on glass filled nylon bobbins. Automatic winding provides an accurate, reliable coil. Kilovolt isolation of coils from metal parts is assured by bobbin construction and the use of high grade insulating materials. An outer layer of self-bonding insulating material protects the windings and provides an attractive finish.

AVAILABLE OPTIONS

Options available are not limited to those offered by other producers or to those shown in this catalog. Numerous additional features, already designed, are available and are a result of the company's vast application experience. Typical options include the following:

A. PLUNGER OPTIONS — Tapped hole in linkage end, flat stamped yoke, special finishes, tailored conical pole face angles, special pushrods and internal springs.

B. ACTION FEATURES — Shock dampeners (with or without spring return), anti-rotation, captive plunger, sealed plunger cavity, dashpot control, power surge operation, and special assemblies such as push-pull tandem operation.

C. COIL VARIATIONS — Windings designed for specific voltage and duty cycle combinations, choice of materials consistent with the need of special requirements, special terminations, encapsulation, multiple windings, printed circuit board mounting, built-in thermal cutouts, and fungus resistant construction.

D. PACKAGE OPTIONS — Special mounting holes, additional tapped holes, threaded bushing at "push end" or "pull end."

COIL RATINGS

The Series G solenoids are designed to operate in a 40°C. max. ambient with the total average coil temperature not to exceed 130°C. (Class B). The resistance of the coil will rise by 30% with a coil temperature change of 90°C. (130 minus 40) and conversely, the current will drop to 70% of its original value. These facts are useful in determining the operating safety of a coil under different ambient temperatures, duty cycles, on and off times, heat sinking, etc.

The THERMAL TIME CONSTANT shown on each data sheet is defined as the length of time required for a coil to reach 63% of the final continuous duty temperature rise. The maximum permissible "on time" for an intermittent duty cycle will be proportional to this value.

It should be noted that any voltage can be applied to any coil providing temperature limitations are not exceeded. Consequently, the designer has much latitude when continuous duty is not required.

THE CONTINUOUS DUTY coils specified in this catalog cannot, however, be operated continuously at voltages above the rating unless heat sinking is applied. Because of the known relationship between the resistance of a coil and its average temperature, the easiest way to evaluate operational safety is by measurement of resistance change under operating conditions. The following formula may be used to determine safe operation within maximum temperature limits:

1.3 x Coil Resistance* = Max. Coil Resistance Hot
* From catalog (nominal 25°C value)

Resistance above the maximum value would indicate the coil was operating beyond its temperature rating. In some cases, an excessive rise in temperature for a very short duration may not be damaging.

Under INTERMITTENT DUTY conditions, more power may be applied to the coil without overheating thus resulting in more work available from the solenoid. For operation under these conditions, maximum "on time" must be observed within the limits determined by the above formula.

As noted previously, there is considerable latitude left to the user in selecting coils, applied voltages and "on time", the proviso being that current or resistance be monitored to insure that under actual operation a safe temperature is not exceeded.

FORCE-STROKE CHARACTERISTICS

Three Force-Stroke graphs are provided for each solenoid duty cycle. They represent the gross pull available under the following conditions:

Curve 1 — Nominal coil voltage at 25°C.
Curve 2 — Nominal coil voltage at max. temperature rise.
— 80% of nominal voltage at 25°C.
Curve 3 — 80% of nominal voltage at max. temperature rise.

The user is cautioned to take into account the weight of the plunger when, because of orientation, gravity may be a factor. Similarly, if the use of a return spring is planned, the net pulling force above the spring should be checked for adequacy.

RESPONSE TIME

The response time is specified as the time required for the plunger to move from a given position to the stop after power is applied. The total plunger motion is specified at one plunger diameter. This parameter is provided only for reference because the ultimate operational parameters provide an infinite number of combinations.

ENGINEERING ASSISTANCE

Solenoid technology has become highly specialized. Our laboratories are equipped with the latest sophisticated equipment and our Engineering Staff is second to none. Call upon us for any help you may need with your application problems.

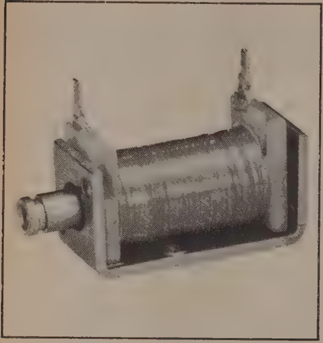
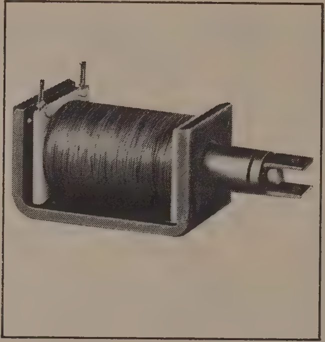
OTHER PROBLEM SOLVERS

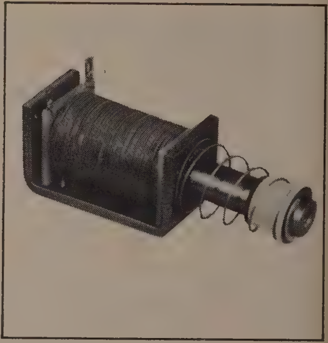
SERIES S

Magnetec has available a family of open frame industrial solenoids referred to as "The Problem Solvers". The well known Series S comes in eight sizes ranging in length from .825 inches to 2.480 inches. Available for immediate "off-the-shelf" delivery are more than 2300 combinations of size, coil voltage, duty cycle, and coupling options. Each size is available in one of four standard D.C. coil voltages — 6, 12, 24, or 120 — and in one of three standard duty cycles — 100%, a combination 50% and 25%, or 10%. The mechanical options include a clevis, a push rod with or without plastic tip, a shock dampener, a return spring, and combinations of these options . . . all standard! **Magnetec's Series S solenoids are fully described in catalog S101A which is available upon request.**

Magnetec offers a unique design engineer's solenoid kit for $19.95 . . . the SK2 valued at $48.00. The kit enables the user to design, customize, and test in the application — all on the spot. Included in the kit are all eight Series S frame sizes along with all standard mechanical options, thus providing 192 combinations! The solenoids utilize 24 VDC continuous duty cycle coils.







MAGNETEC'S TUBULARS..........WITH A TWIST

Magnetec has available tubular solenoids completely interchangeable with popular industry recognized standards and is able to offer design flexibility within a popular standard size. As an example, our popular ¾" diameter T75 model is available as either a push or pull type. In addition to the popular case length of 1½" for the T75, Magnetec also offers case lengths of 1⅛" and 1¼". Performance characteristics are optimized. Contact Magnetec for more information on both standard and custom designed tubulars.

CUSTOMIZED PROBLEM SOLVERS

Magnetec has custom designed numerous special solenoids. The following applications are among those in which these are being utilized.

Business Machines:
- Needle printer heads.
- Interposers for impact printers.
- Paper advance mechanisms.
- Printer ribbon direction selectors.
- Card punching, sorting, and feeding mechanisms.
- Pen recorders.

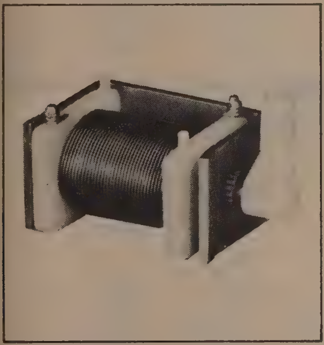
Photography:
- Camera shutter actuators.
- Microfilm copiers.
- Automatic film processors.

Automotive:
- Solenoid operated door locks.
- Emission control systems.
- Adaptive braking systems.

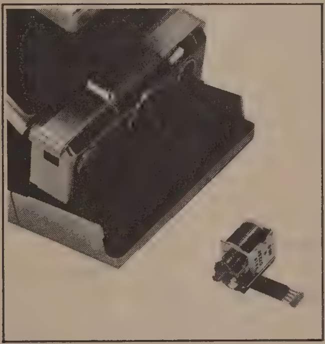
Aircraft:
- Actuator for cabin air control valves.
- Missile direction control systems.
- Machine gun firing mechanisms.
- Jet engine thrust reversers.

Safety:
- Ground fault interrupters.
- Industrial machine safety mechanisms.

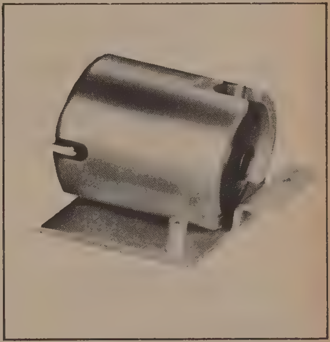
Other:
- Machine controls.
- Vending equipment.
- Coin changer mechanisms.
- Automatic music systems.
- Industrial scales.
- Vent controls for heating systems.
- Actuator mechanisms.
- Solenoid actuated diaphrams for valve flow control.
- Cash drawer latches.
- Locking devices and alarms for security systems.



Tripper solenoid used in a ground fault interruptor.

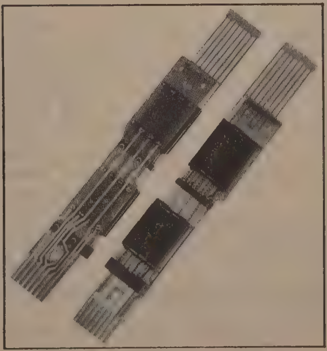


Shutter actuator with integral switch for a camera.



Linear to rotary power translator for key punch equipment.

Pilot operator for a pneumatic valve used in a "Hot Melt" applicator.



Solenoid bank for interposer service in data processing equipment.

High speed print head solenoid for dot matrix impact printers.

MA & MS TO-5 SERIES RELAY

Qualified
MIL-R-5757

GENERAL SPECIFICATIONS

CONTACT CAPABILITIES

RATING
10,000,000 operations at low level. 1,000,000 operations at 0.5 amp, 28V d-c resistive load. 100,000 operations at 1.0 amp, 28V d-c resistive load.

CONTACT RESISTANCE
0.1 ohm maximum before life (measured ⅛″ from header). 0.2 ohm maximum after life at maximum rated current (measured ⅛″ from header).

CONTACT BOUNCE
1.5 milliseconds maximum

OVERLOAD
2 amps at 28V d-c for 100 operations minimum

INSULATION RESISTANCE
10,000 megohms minimum between mutually insulated terminals

ENCLOSURE
Hermetically sealed. All welded.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE
—65°C to +125°C. (Higher temperature ratings on special order)

VIBRATION
.06″ DA or 30G, 10-3000 cps.

SHOCK
80 G's

CRYSTAL CAN RELAYS

RADIO FREQUENCY RELAYS

RF contacts are terminated with RG-196/U Teflon insulated coaxial cable, 6″ in length. Other lengths, types of cable, or coaxial connector terminations available on special order. These relays meet or exceed the applicable portions of MIL-R-5757 and MIL-S-3928.

RADIO FREQUENCY CHARACTERISTICS

Frequency Range	0 - 500 MHz*
Voltage Standing Wave Ratio (VSWR)	<1.1:1 typical
Insertion Loss	0.16db typical
Characteristic Impedance	50 ohms†
Crosstalk	−50db typical

** Usable to 1000 MHz with reduced RF characteristics*
† Other impedances available on special order

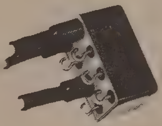
DICE CUBE RADIO FREQUENCY RELAY — SERIES RFC PRODUCT BULLETIN 159

Operate Power 150 mW

Relay Type	RFC
Size	0.5-inch cube
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.3 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series C

HALF SIZE CRYSTAL-CAN RADIO FREQUENCY RELAY — SERIES RFK PRODUCT BULLETIN 156



Operate Power 250 mW

Relay Type	RFK
Size	.4 x .8 x .4 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.37 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series K

CRYSTAL-CAN RADIO FREQUENCY RELAY — SERIES RFB PRODUCT BULLETIN 157

Operate Power 250 mW

Relay Type	RFB
Size	.875 x .800 x .400 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.95 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series B

HIGH SENSITIVITY RADIO FREQUENCY RELAY — SERIES RFBC PRODUCT BULLETIN 158

Operate Power 40 mW

Relay Type	RFBC
Size	1.275 x .800 x .400 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	1.0 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series BC

ENVIRONMENTAL CHARACTERISTICS FOR STANDARD CRYSTAL CAN SERIES

Life: 100,000 operations at 125°C and rated load.
Temperature: −65°C to +125°C, operating.
Vibration: 10 to 2000 Hz, 20G min.
Shock: 100 G
Sealing: Hermetic, to 80,000′

Insulation Resistance: 1000 megohms min., except coil-to-case at high temperature 500 megohms min.

Dielectric Strength: Contacts-to-case: 1000 volts rms, 60 Hz, mutually insulated terminals: 500 volts rms standard.

CRYSTAL CAN RELAYS

GENERAL SPECIFICATION CRYSTAL CAN RELAY

ENVIRONMENTAL CHARACTERISTICS FOR STANDARD CRYSTAL CAN SERIES

Life: 100,000 operations at 125°C and rated load.
Temperature: −65°C to +125°C, operating.
Vibration: 10 to 2000 Hz, 20G min.
Shock: 100 G
Sealing (welded): Hermetic, to 80,000′

Insulation Resistance: 1000 megohms min., except coil-to-case at high temperature 500 megohms min.

Dielectric Strength: Contacts-to-case: 1000 volts rms, 60 Hz, mutually insulated terminals: 500 volts rms standard.

The Hi-G CA & CS Series relays are manufactured to the same exacting standards as its Military counterpart. Each relay boasts an all welded construction to afford hermeticity of seal and insurance of chamber cleanliness. This low price TO5 type relay will comply to all of your switching requirements between dry circuit and 1.0 ampere.

The Hi-G 2CK series represents a dynamic approach to the industrial switching market. A hermetically sealed device permitting total submersibility and assuring long life, trouble free operation and sharply reducing maintenance and service costs. Ideal for data processing, communications, machine control and remote station operation in the low level and power switching range, regardless of the environment. Available with a transipad mounting to facilitate cleaning and protection of dual sided circuit board wiring.

TIME DELAY RELAYS

MODEL TDP-1 — FIELD PROGRAMMABLE
MODEL TDO — DELAY ON OPERATE
MODEL TDR — DELAY ON RELEASE

SERIES **TD**

DESCRIPTION

The TD series of time delay relays are designed for a wide range of industrial control and sequencing operations. Enclosed in a plastic dust cover, they provide the highest quality components and construction at a low overall cost. The new field programmable model is ideally suited for R & D, low volume and production requirements. A substantial reduction in inventory can be achieved when a variety of models are necessary. The standard line also includes conventional adjustable and fixed, single mode timers for delay on operate or delay on release operation.

FEATURES

- CMOS digital circuitry
- Transient and reverse polarity protected
- No "false" operation in delay on operate mode

SPECIFICATIONS FOR STANDARD MODELS

FREQUENCY: 50/60 Hz on all AC inputs.
CONTACTS: DPDT relay, 10 amp/115 VAC resistive.
ACCURACY: ±10% over voltage and temperature range.
REPEATABILITY: ±2%.
RECYCLE TIME: 100 milliseconds max.
RESET TIME: Less than 100 milliseconds.
CURRENT DRAIN: Less than 150 milliamps.
TEMPERATURE RANGE: Operational −10°C to +55°C. Storage −55°C to +85°C.

DELAY TIMES	**Model TDO**	**Model TDR**	**Model TDP-1**
Adjustable	0.3 to 10 sec. 3 to 80 sec. 10 to 300 sec.	Same as TDO	All three*
Fixed	10, 60, 180 or 300 seconds	Same as TDO	Not Applicable
INPUT VOLTAGE	24 VDC, 24 VAC or 120 VAC	Same as TDO	All three*
MODE	Delay on Operate	Delay on Release	Both*

* Model TDP-1 field selectable from a factory setting of delay on operate, 0.3 to 10 sec. and any of the three voltages listed.

AVAILABLE OPTIONS

- Repeatability ±1%
- Accuracy ±5%
- Delay times — Millisec. or hours
- Input voltage as required
- Interval type timers
- Repeat cycle timers

HI-G INC. WINDSOR LOCKS CT.

PROGRAMMABLE MODEL

Model TDP-1, shown above, is new in concept by virtue of its field programmable features of MODE, TIMING RANGE AND VOLTAGE. Initially, the unit is factory set for Delay on Operate, 0.3 to 10 seconds and 120 VAC, 24 AC or 24 DC through appropriate pin selection. To change mode or timing range merely requires switching an internal jumper for each selection. This is easily accomplished via a hinged side door. Where field programmability is not required or desired the same CMOS digital circuitry is used to provide the more conventional adjustable or fixed models, operating mode and specific input voltage.

CONVENTIONAL MODELS

Model TDO is a delay on operate device available in adjustable or fixed time selections, any specific input voltage and utilizes an octal plug base.

Model TDR is identical to Model TDO except for delay on release mode and an 11 pin plug base.

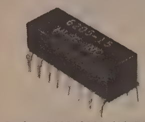
DELAY ON OPERATE — SERIES 6200
INTERVAL (SINGLE SHOT) — SERIES 6300
LOGIC NORMALIZER — MCG-5



Series 6200/6300 (16 Pins)
MCG-5 (14 Pins)

DESCRIPTION

The standard versions of these compact, solid-state timers provide a path from the negative input to the load terminal. Similarly, the "P" versions provide a path from the positive input.

GENERAL SPECIFICATIONS

DELAY ACCURACY: ±10% over temperature and voltage range.

REPEATABILITY: ±2%.

RECYCLE TIME: 100 milliseconds maximum.

DELAY SET POINT: Fixed - No external components required.
Adjustable - External resistor required.

OUTPUT: SPSTNO - Solid-state.
Standard model - Switches to minus input.
P Characteristic - Switches to plus input.

TEMPERATURE RANGE: 0°C to +71°C.

TERMINALS: Tin Dipped Phosphorous Bronze.

CASE MATERIAL: Diathialate.

TIMING DESIGNATION

CODE	105	11	13	15	110	130	230
TIME	0.5	1.0	3.0	5.0	10	30	0-30

TIMING CODE 230 — Provides a device that may be adjusted using external resistance, over an approximate range of 15-30 milliseconds to 30 seconds. Lower Limit R_T is restricted to 5K minimum. With less resistance, erratic or no time-out may result. 600-700K approximate, will provide a 30 second delay, with intermediate, resistance vs. time, being a linear curve.

PART NUMBER DEFINITION

62 05 P - 1 10

Basic Output Logic Type — 62
Input Voltage — 05
Switching Characteristic (no letter denotes standard switching characteristic) — P
Timing Mode — 1
Delay Time — 10

HOW TO ORDER

A complete part number is formed with a model number and timing code. The model number is selected to provide the desired combination of timing logic, input voltage, and switching characteristic, listed in Table I. Extract the timing code representing the desired time from Table II, and combine. i.e. 6348P-130.

MODEL 6400

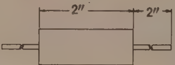
TWO TERMINAL "SERIES" CONNECTED SOLID STATE TIMING MODULE

ECONOMY and CONVENIENCE of installation are foremost in a solid state, (2) lead, cylindrical cased timer, providing a DELAY-ON-OPERATE control function for electromechanical devices.

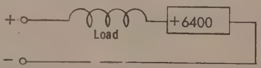
HI-G, INC.
MODEL-6400
TIMER

FEATURES

- Input voltages of 12 VDC, 24 VDC, and 48 VDC
- Fixed delay times of 1.0, 5.0, 10, 30, and 60 seconds
- Series connected with load
- Accuracy, ±10% (over temperature range)
- Repeatability, ±2%
- Output rating (inductive), 0.5 amperes at the rated input voltage
- Reverse polarity protection provided
- Operating temperature range 32°F to +125°F



WIRING DIAGRAM



HOW TO ORDER

Form a part number by the following method, using code numbers shown in the tabulation below.

BASIC NUMBER **64XX - XX - XX**

Input Voltage — 64XX
Output Rating — XX
Physical Configuration — XX
Delay Time — XX

Part number code determination			
Input Voltage	**Output Rating**	**Physical Conf.**	**Delay Time**
12 = 12 VDC 24 = 24 VDC 48 = 48 VDC	A = 0.5 amp	A = Wire leads	1 = 1.0 seconds 5 = 5.0 seconds 10 = 10 seconds 30 = 30 seconds 60 = 60 seconds

Example part number: 6424-AA-5 = A 24 VDC timer with a 5 second delay time.

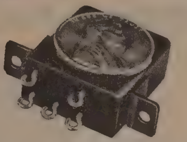
CRYSTAL CAN MOUNTED SOLID STATE TIMER

FIXED SERIES **1800**

ADJUSTABLE SERIES **1900**



TIMING DIAGRAM — Delay-On-Make

The 1800 and 1900 Series are all Solid-State Timers that offer excellent reliability over a useful life well in excess of one million operations. They have a fast reset time, are remarkably stable over a wide temperature range, and can provide delays down to the millisecond range.
Each unit is hermetically sealed and encapsulated with a standard crystal-can header which results in an extremely rugged, high performance assembly. All units are available in a choice of standard mounting configurations. The 1860 version is directly interchangeable with a crystal can relay.

SERIES CHART

Type	Delay Times	Reset Time (Microsec)	Output	Max.Forward Leakage
1860	10 ms to 10 sec. Factory Set	20	S.P.N.O. 250 ma @ 25°C	1 milliamp
1800	10 ms to 120 sec. Factory Set	100	S.P.N.O. 1.0 Amp @ 25°C	2 milliamp
1900	10 ms to 90 sec. Adjustable	100	S.P.N.O. 1.0 Amp @ 25°C	2 milliamp

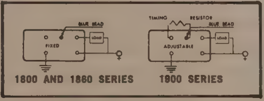
ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE: 18 to 31 Volts DC
DELAY TIME TOLERANCE: ±10% at Set Point or 10 milliseconds, whichever is greater.
RECOVERY TIME: 100 milliseconds maximum.
RECYCLE TIME: 20 milliseconds maximum.
OUTPUT DERATING FOR 125°C: 75%.
INDUCTIVE LOADING: Use external diode.

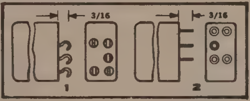
ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +85°C.
VIBRATION: 20g's, 10 to 2000 Hz
SHOCK: 50g's, 11 ±1 milliseconds duration.
INSULATION RESISTANCE: 1000 megohms @ 500 volts DC, all terminals to case.
DIELECTRIC STRENGTH: 500 volts rms, 60 Hz, all terminals to case.
SEALING: Hermetic, 1.3 inches mercury.
LIFE: Over 1,000,000 operations.

ELECTRICAL DIAGRAMS

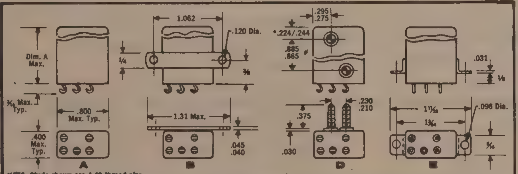


HEADER STYLES



NOTE Terminal Spacing 0.2 inch, all headers with terminal diameter 0.030 inch.

MOUNTING STYLES



NOTE: Studs shown are 4-40 thread size.
*.224/.244 is for 1.45" and 1.275" housings; the .875" housing dimensions is .157/.177. #.498/.478 for type 1860 housing.

TIMING MODULE TYPES

Series Type	Type	Timing Range	Temperature Range	Housing Length (Dim. "A")

* Refer to Model 1700 for Adjustable Timing Formula.

DETERMINATION OF MODULE PART NUMBER

The timing code number consists of four digits with the first three significant figures and the last digit the number of zeros following the significant figures; thus, 0100 would be 10 milliseconds, 1101 is the code for 1.1 seconds, and 6001 would be 6.0 seconds. A typical part number for the Hi-G solid-state timing module is 1860-1A-1002; this is a fixed timing module designed to operate in the −55°C to +85°C temperature range, with hook terminals and a style A mounting, and a delay of 10 seconds.

1860 — SERIES
1A — HEADER STYLE, MOUNTING STYLE

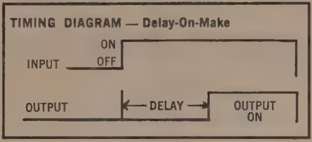
DUAL-IN-LINE HYBRID TIMING MODULE

TRIMMABLE SERIES **6100**



FEATURES

- Time delays from 50 ms to 60 sec.
- State-of-the-art reliability.
- Package less than ⅜" x ½" x ⅞".
- Delay-on-make-operation.
- Dual-in-line compatible.
- Life 1,000,000 operations minimum.
- External time adjustment possible.

ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE: 18 to 32 volts DC, reverse polarity protection provided.
DELAY TIME: 50 milliseconds to 60 seconds. Factor set, fixed time.
DELAY TIME TOLERANCE: ±10%.
RECYCLE TIME: 0.5% (nominal delay time) = max. recycle time @ 25°C.
RECOVERY TIME: 100 milliseconds max.
OUTPUT SWITCH: S.P.N.O. — solid-state.
OUTPUT RATING: .25 amp resistive @ 28 VDC derates to .1 amp @ 85°C. Minimum load required, 10 ma.
CURRENT DRAIN: 6 ma @ 28 VDC (25°C) plus load current.
OUTPUT LEAKAGE: 1 ma max. in non-conducting state.
FORWARD DROP: 2 VDC max. in conducting state.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +85°C.
VIBRATION: 20g's, 10 to 2,000 Hz.
SHOCK: 50g's, 11 ±1 millisecond duration.
LIFE: 1,000,000 cycles minimum.

PHYSICAL DATA

HEIGHT: 0.370 inches.
WIDTH: 0.460 inches.
LENGTH: 0.800 inches.
FOOTPRINT: Dual-in-Line (0.3" wide x 0.1" grid).
CONNECTIONS: Solder pins, ½" long.
ENCAPSULATION: Epoxy.
WEIGHT: Approx. 0.2 ounces.

ELECTRICAL DIAGRAM

* Units can be trimmed in timing to allow custom fitting into systems prior to finalization of timing requirements, by connecting components external to units.

(NC = NO CONNECTION)

OTHER MODELS

6150 — HERMETICALLY SEALED
TEMPERATURE RANGE: −55°C to +125°C.
TIMING TOLERANCE: ±15%
SEALING: 72,000 feet
ENCLOSURE: Base: .58 x .92.
(DIMENSIONS MAX.) Height: .42.

6155 AND 6105 — TTL COMPATIBLE
INPUT VOLTAGE: 5 V ±0.5 VDC
OUTPUT: Fanout of 10. (20 ma sink current).
FORWARD DROP: 0.1 VDC maximum.
LEAKAGE: 1.0 μa maximum.
TRIM FEATURE: Not applicable.

Unless otherwise specified, characteristics are per 6100 model. (MODEL 6155 IS HERMETICALLY SEALED)

PHYSICAL DATA

6100 — Plastic shell epoxy encapsulated; terminals (6) are 0.018 dia. gold plated arranged in .1 x .3 grid pattern (DIP). Overall dimensions, base .475 x .815, height .405 inches max.
6150 — Metal case, hermetically sealed, terminals (14) are 0.018 dia. gold plated arranged in .1 x .3 grid pattern (DIP). Overall dimensions, base .58 x .92, height .42 inches max.

DETERMINATION OF MODULE PART NUMBER

A complete part number consists of 2 elements.
1) Series Number — This number establishes the function and enclosure style, i.e., Seris 6100 is a solid-state output with solder pins for printed circuit board mounting.
2) Timing Code Determination — The timing code consists of four digits and denotes time in milliseconds. The first three digits are significant figures and the last digit is the number of zeros to follow. Thus 100 milliseconds is coded 1000; 1.1 seconds is 1101 (1100 milliseconds); and 60 seconds is 6002 (60,000 milliseconds).

Example: 6100 — SERIES NUMBER; 6002 — TIMING CODE

This number designates a solid-state output timer with 60 seconds (60,000 milliseconds) time delay.

ORDERING INFORMATION

Series	Contact Config.	Rating	Temperature Range	Delay Min. Max.
6100*	SPNO	.25 Amp	−55° to +85°C	0.05 to 60 sec.
6105*	SPNO	TTL - 10 fanout	−55° to +85°C	0.05 to 60 sec.
6150	SPNO	.25 Amp	−55°C to +125°C	.05 to 60 sec.
6155*	SPNO	TTL - 10 fanout	−55° to +125°C	0.05 to 60 sec.

* Add timing code designation

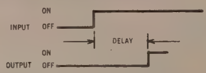
MINIATURE TIMING MODULE

FIXED TIME DELAY

SERIES **2400**

TIMING DIAGRAM — Delay-On-Make



FEATURES

The Series 2400 Time Delay Relay combines a solid-state timing circuit and a Hi-G relay in a package only slightly longer than a standard crystal-case housing. This combination provides the current-carrying capacity and the environmental immunity of Hi-G's electromechanical relays with the long life and quick response of electronic circuits. Delays from 50 milliseconds up to 120 seconds can be specified for this rugged DC timing module. The solid-state circuit has a voltage regulator circuit that permits the use of unregulated power sources.

HOW TO ORDER

The part number for a Hi-G miniature time delay module consists of four elements: the series number, the header style, the mounting style, and the timing code number. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeroes following the significant fgures; thus, 0500 would be 50 milliseconds, 1101 is the code for 1.1 seconds, and 5002 would be 50 seconds. A typical part number for the Hi-G miniature delay module is 2401-1A-1102; this is a time delay module designed to operate in the −55°C to +85°C temperature range, hook terminals, style A mounting, providing a delay of 11 seconds. Specify 2402 for +125°C.

ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE: 18 to 31 volts DC. Reverse polarity protection provided.

DELAY TIME: 50 milliseconds to 120 seconds Delay-on-make.

DELAY TIME TOLERANCE: ±10%.

RESET TIME: 10 milliseconds maximum.

RECYCLE TIME: .5% (nominal delay time) = recycle time maximum @ 25°C.

RECOVERY TIME: 0.1 second maximum up to 20 seconds delay, 0.5 seconds maximum to 120 seconds.

CONTACT RATING: 2 amperes resistive at 30 VDC or 0.125 amp at 115 V, 400 Hz.

CONTACT ARRANGEMENT: 2-pole, double-throw.

CURRENT DRAIN: 85 ma maximum @ 31 VDC (25°C).

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +85°C.

VIBRATION: 20 G's, 10 to 2000 Hz.

SHOCK: 50 G's, 11 ±1 milliseconds duration.

INSULATION RESISTANCE: 1000 megohms @ 500 volts DC, all terminals to case.

DIELECTRIC STRENGTH: 500 volts rms, 60 Hz, terminals to case.

SEALING: Hermetic, 1.3 inches mercury.

LIFE: 50,000 operations minimum.

WEIGHT: 1.2 oz. maximum.

FLASHER

SERIES **2600**

APPLICATION

The Hi-G Series 2600 Flasher can be used wherever warning or indicating light, navigation or position lights, panel or control lights must be operated with a maximum of reliability in severe environments. The Series 2600 can also be used to interrupt Tone Generators or other Signaling Devices at a predetermined frequency.

DESCRIPTION

The Series 2600 Flasher is a completely Solid State Device. Cycling of the unit commences with application of input power, or the unit can be actuated by a control line when standby power is available. Electronic circuitry provides a precise flash rate which is stable over a wide temperature range. Flash cycle available from 30 to 600 per minute.

ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE: 18 to 32 Volts DC.

OUTPUT: S.P.N.O., 100 ma (Solid-state).

CURRENT DRAIN: 30 ma @ 28 Volts DC.

DUTY CYCLE: 1:10 to 10:1.

STABILITY: ±10% over temperature and voltage input.

ENVIRONMENTAL

OPERATING TEMPERATURE: −55°C to +100°C.

VIBRATION: 20 G's, 10 to 2000 Hz.

SHOCK: 50 G's, 11 ±1 MS.

ALTITUDE: 70,000 feet.

LIFE: 10 x 10^6 cycles.

CASE: Hermetically sealed.

ADJUSTABLE TIMING FORMULA

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/T max.) −40K
Rx = External Res. in OHMS
T = Desired time in seconds
T max. = Maximum time (code)

A high quality deposited carbon ±1%, .1w (min.) resistor is recommended for external resistance.

DETERMINATION OF MODULE PART NUMBER — ORDERING INFORMATION

Hi-G Adjustable Time Delay Modules cover one decade, e.g., 62 milliseconds to 620 milliseconds; you may select any decade that best suits your application within the range of 50 milliseconds to 180 seconds. (Of course, longer ranges are available on special order.) The upper decade limit is $T_{max.}$ in the timing formula and is the timing code number in the part number described in the following paragraph.

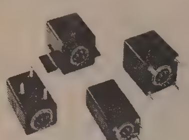
The part number for a Hi-G Time Delay Module consists of three elements: the series number (from the Table), a letter signifying mounting style, and the timing code number. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeroes following the significant figures; thus, 50 milliseconds would be coded 0500, 1.1 seconds would read 1101, and 1 minute (60 seconds) would be 6002.

A typical part number for an adjustable timing module is 1722-C-1102; this is a DC unit in the −65°C to +125°C temperature range with a 2 pdt contact arrangement, in a style C mounting, and with a time delay range of 1.1 to 11 seconds.

HI-G INCORPORATED
SPRING STREET AND ROUTE 75, WINDSOR LOCKS, CONN. 06096 / PHONE: (203) 623-2481 / TWX: 710-420-0592

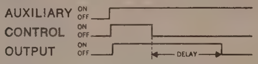
DELAY ON RELEASE TIMING MODULE

FIXED SERIES **5600**
ADJUSTABLE SERIES **5700**



FUNCTION

Apply auxiliary power. Upon application of control power, the output will energize. Remove control power to initiate delay period.



ELECTRICAL PARAMETERS

INPUT: Units will not be damaged by reverse application of input voltage.
Auxiliary — 18 - 31 VDC
Control — 10 - 31 VDC. Ground common to aux. power line.
10 volts minimum must be applied for a minimum duration of 20 milliseconds to energize output and arm the timing circuit.

DELAY TIMES: Overall, 50 msec to 300 seconds. Units rated 10 ampere, minimum delay 100 milliseconds. Units rated 125°C, maximum delay 180 seconds.

TIMING TOLERANCE: ±10%, applicable over rated temperature and input voltage ranges.

CURRENT DRAIN: (@25°C @ 28 VDC).
Control line — 15 ma typical, 25 ma maximum.
Auxiliary — Deenergized (after completion of delay period) 25 ma Energized. (See Tabulation).

Configuration	2 & 5 amp	10 amp
1PDT	100 ma	150 ma
2PDT	150 ma	240 ma

RESPONSE TIME:
Operate — rated 2 & 5 amp, 10 msec max. 10 amp, 20 msec max.
Recycle — 0.5% maximum of specified delay.
Reset — 20 milliseconds maximum.

CONTACT RATINGS:

Specified Rating	Amperes @ 30 VDC Res	Amperes @ 30 VDC Ind	Amperes @ 115 V 400 Hz Res	Amperes @ 115 V 400 Hz Ind
2 amps	2	1	1	0.3
5 amps	5	1.5	3	1
10 amps	10	5	5	3

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +85°C or −55°C to +125°C.
VIBRATION: 10-20,000 Hz @ 20g except 10 amp rated units 15g.
SHOCK: 50g 11 ±1 millisecond.
INSULATION RESISTANCE: 1000 Megohms minimum @ 500 VDC.
DIELECTRIC STRENGTH: 1000 Vrms, 60 Hz @ Sea Level. All terminals tied together to case, and across open contacts.
SEALING: Hermetic 1.3 inches mercury.
LIFE: 2 & 5 amp rated - 100,000 operations minimum. 10 amp rated - 50,000 operations minimum.

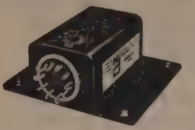
VOLTAGE LEVEL SENSOR

AC AND DC MONITORING



FEATURES

DC SENSOR — SERIES 1310

The Hi-G 1310 Series DC Voltage Sensor is essentially a voltage monitoring device operating a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open or close a circuit when a predetermined voltage is present at the input. By using a Hi-G electro-mechanical relay as the output of the voltage sensor, a positive switching action can be achieved with very close difference between pull-in and drop-out voltages.

AC SENSOR — SERIES 1350

The Hi-G 1350 Series AC Voltage Sensor provides an output "signal" when the monitored power line voltage reaches a predetermined level. This rugged unit with reliable solid state design, provides precise, repeatable operation over a wide temperature range.

The input voltage is fed into a temperature compensated comparator circuit. When the input reaches the pre-set level, transistor amplifiers switch the output relay to provide a "signal." This output may control any external device, process, or warning system to protect expensive equipment.

The units for both series are potted and hermetically sealed and are designed to meet the environmental requirements of airborne applications. The following are available for both the 1310 and 1350:

STANDARD OPTIONS

1. Solid-State Output.
2. Two Stage Sensing (Voltage Band).
3. Up to 10 Amp Relay Output.
4. Other Voltage Sensing Levels from 5 to 240V.
5. Controlled Drop-out Differential.
6. Operate with Auxiliary Control Voltage.

1350 ONLY: Special 3 Phase Version Available.

PART TYPE CHARACTERISTICS

Specification	Part Number	
	1310	1350
Pull-in Voltage Smallest Increment Drop-out Voltage (Rel. to Pull-in) Current Drain @ 25°	17.0 to 33.0 VDC 0.1 Volt −0, +0.5 Volts 15 ma Max.	90 to 120 V, 60 or 400 Hz 1.0 Volt +0, −3.0 Volts 100 ma Max.

ELECTRICAL SPECIFICATIONS

ACCURACY: ±2½% of set point over temperature range.

MAXIMUM ALLOWABLE APPLIED VOLTAGE: 150% of specified pull-in voltage.

AUXILIARY VOLTAGE: None required.

OPERATE AND RELEASE TIMES: 50 milliseconds maximum over the temperature range.

LIFE: 100,000 operations minimum.

CONTACT ARRANGEMENT: 2PDT.

CONTACT RATING: 2 amperes resistive @ 30 volts DC; 0.3 amperes resistive at 115 volts RMS, 400 Hz.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE: −55°C to +125°C.

VIBRATION: 20 G's, 10 to 2000 Hz.

SHOCK: 50g's, 11 ±1 milliseconds duration.

INSULATION RESISTANCE: 1000 megohms minimum @ 500 volts DC, all terminals to case.

DIELECTRIC STRENGTH: 1000 volts RMS, 60 Hz @ sea level, all terminals to case.

SEALING: Hermetic, 1.3 inches of mercury.

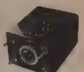
SERIES 7000 FREQUENCY SENSORS

PHASE SENSOR

3 φ POWER SYSTEM MONITOR



TWO STANDARD TYPES

P TYPE FOR STATIC LOAD

With line voltages and frequency within operating limits, P-Type units will energize only when output phase are in sequence A-B-C. They will de-energize only when power is removed. The P-Type unit is best suited to applications where static loads are used and where regenerated voltage will not be present if a phase opens.

Q TYPE FOR MOTOR LOADS

Q-Type units perform the same function as the P-Type since they will energize only when input phases are in sequence A-B-C. In addition, the units will de-energize when any phase is disconnected or grounded provided the voltage input to the unit is below 50% of the nominal phase-to-phase voltage input. Q-Type units are suitable for motor loads where a regenerated voltage is produced.

NO NEUTRAL CONNECTION

Neither P- or Q-Type units require connection to neutral leg.

For high-current applications, phase sensors are used with slave relays having heavy duty contact ratings.

For applications having special requirements as to voltage, frequency, contact arrangements, and ratings, consult the factory.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE: −55°C to +85°C.

VIBRATION: 20g's, 10 to 2000 Hz.

SHOCK: 50g's, 11 ±1 milliseconds

INSULATION RESISTANCE: 1000 megohms minimum @ 500 volts DC, all terminals to case.

DIELECTRIC STRENGTH: 1000 volts rms, 60 Hz, @ sea level, all terminals to case.

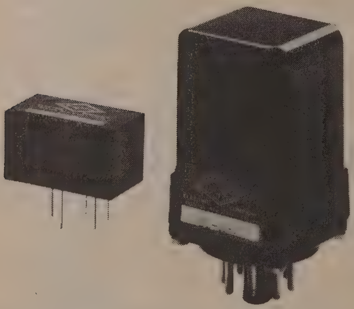
HEiNEMANN

SOLID-STATE DC AND AC RELAYS FOR HIGH-SPEED COMMUNICATIONS AND COMPUTER USES

These new, completely encapsulated solid-state relays represent the highest attainment in switching technology for applications requiring maximum speed and repetition rate, maximum pulse-shape conformity between control and output circuits, and maximum immunity to noise and other spurious signals without need for external suppression.

General-purpose models available in dc load ranges from 300mA to 6A; ac loads to 10A. These relays have practically unlimited life, with no moving parts, no contacts to wear or burn, and none of the limitations in mounting position normally imposed on conventional switching devices.

Directly compatible with TTL for computer-peripheral applications; no bias necessary when used with control signals of 5V or more. Repetition rate averages 2,000/sec.



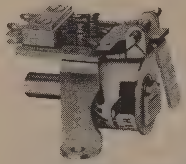
Transmit, receive, and transceive relays for communications, in octal plug-in or PC-mount pack, available in a wide choice of input/output configurations (TTL, polar, neutral, flip-flop, complementary, side-stable, etc.). Compatible with all digital communications systems.

Complete information in Bulletin Q-5400.

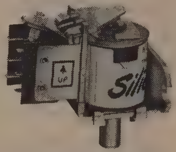
SILIC-O-NETIC TIME-DELAY RELAYS CAN CARRY CONTINUOUS LOADS TO 5A, ELIMINATE LOAD RELAY

You can often eliminate the need for two relays in timing applications. Heinemann Silic-O-Netic® time-delay relays can do both the timing and the load switching, because they have a continuous-duty coil and gold-plated 5-amp SPDT or DPDT contacts. If your application, like most time-delay relay applications, can manage with a timing accuracy of ±50% of the delay period, one of the three Heinemann Silic-O-Netic relays would be an economical and reliable choice for you.

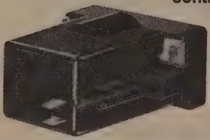
Available in a range of sixteen time delays from ¼ sec to 120 sec. Complete information in Bulletin 5006.



***Type A*—open frame, greatest economy for appliances and other mass-produced equipment.**

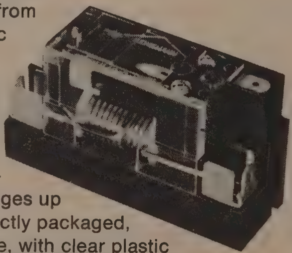


***Type B*—open frame with enclosed snap-action contacts for protection against contamination.**



***Type C*—enclosed in durable phenolic case; quick-on terminals for both coil and contact circuits.**

HEINEMANN OVERLOAD RELAYS FOR CLOSE-TOLERANCE MOTOR PROTECTION



The Type PJ overload relay acts fast, within close tolerances, to protect modern motors which are designed with running current close to locked-rotor current. A choice of three delay curves from slow trip (3 to 9 sec at 450% rated load) to fast trip (0.6 to 2.5 sec at 150% rated load). UL listed for AC motor running current to 65A at voltages up to 600VAC. Compactly packaged, stackable, dust-free, with clear plastic cover to facilitate examination of coil and contacts. Complete information in Bulletin 5104.

We keep you out of trouble.

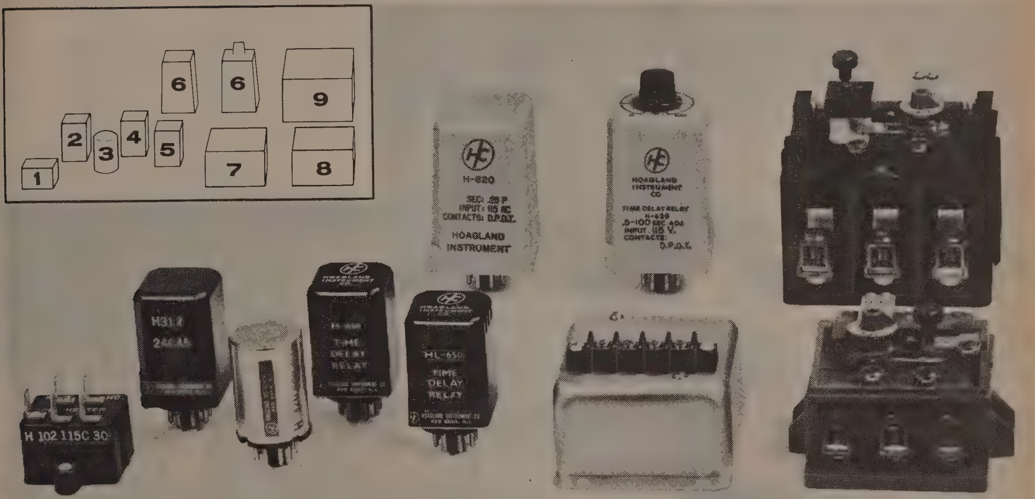
THERMAL TIME DELAY RELAYS
ELECTRONIC TIME DELAY RELAYS
MOTOR OVERLOAD RELAYS



ITEM	DESCRIPTION
	THERMAL TIME DELAY RELAYS
1	**H-101 Series.** Panel mount. Standard time delays available over a range of values from 5 sec. to 180 sec. Other delays available on special request. Standard heater voltages available 6.3, 12, 24, 48, 115 and 230. Other heater voltages available on special request. Contacts, snap action: SPNO, SPNC and SPDT, 2 amp at 115V resistive. Temperature compensated from 0° to 160°F.
2	**H-310 Series.** Plastic, octal plug. Specifications same as H-101 Series.
3	**H-320 Series.** Metal, octal plug. Specifications same as H-101 Series.
	ELECTRONIC TIME DELAY RELAYS
4	**H-650 Series.** Miniature plug-in type. Load capacity 2 amps at 28V DC. Operating voltage 24V AC and 24 and 48V DC. Standard time delays available over a range of values from 0.5 to 100 sec. Other delays available on special request. **General Specifications:** Contact arrangement: SPNO, SPNC, SPDT, DPDT. Repeat accuracy: ±2% timing, ±10% voltage, ±20°F. variation. Life: 1,000,000 cycles (minimum). Adjustments: screwdriver or preset. Also remote potentiometer to customer specifications. Reset time: 0.1 to 0.025 sec. based on initial delay.
5	**HL-650 Series.** Miniature plug-in type. Load capacity 2 amp at 120V AC. Operating voltage 115V AC. Standard time delays available over a range of values from 0.5 to 100 sec. Other delays available on request. Adjustments: screwdriver or preset. Also remote potentiometer to customer specifications. General specifications same as H-650 Series.
6	**H-620 Series.** Heavy-duty plug-in type. Load capacity 5 and 10 amps at 115V AC. Operating voltage 24 and 115V AC and 24, 30 and 48V DC. Standard time delays available over a range of values from 0.5 to 100 sec. Other delays available on request. Available with knob adjust, screwdriver lock, or preset. Also remote potentiometer to customer specifications. General specifications same as H-650 Series except heavier duty.
7	**H-600 Series.** Heavy-duty panel mount type. Barrier-strip, screw or quick connect terminals. Load capacity 5 and 10 amps at 115V AC. Standard time delays available from 0.5 to 100 sec. 230 volt AC input and other delays available on request. Available with knob adjust, screwdriver lock, or preset. Also remote potentiometer to customer specifications. General specifications same as H-650 Series except heavier duty.
	MOTOR OVERLOAD RELAYS
8	**H-400 Series.** Standard full load current ranges available in 27 different models from 1.0 to 50 amps. Other non-standard ranges available on request. Choice of either automatic or manual reset. Full load current setting is adjustable over the range of the relay or may be factory preset. Relays available with trip time characteristics from "super" fast to slow to match your motor curve. Temperature compensation available from −60°F. to 160°F.
9	**H-410 Series.** Same characteristics as H-400 Series except full load current range is from 25 to 150 amps in 12 different models.

vacuum relays

INTRODUCTION: Vacuum relays as manufactured by ITT Jennings are available for utilization in the control of high power equipment and circuits. Standard units are available for current ratings of 75 amps, peak voltage levels to 30 kv, and transferring power at frequencies through the VHF band.

ADVANTAGES: Because of the higher dielectric strength of the vacuum relay (1000 volts/mil working), small contact spacing and lower resultant travel allows the design of small, low-bounce actuating mechanisms which lead to minimum size units.

APPLICATIONS: The majority of applications of these units include the switching of antennas, frequency bands, transmit-receive modes, power circuits, and elements in pulse forming networks.

vacuum coaxial relays

RC21
RC53
RC41
RC5

INTRODUCTION: The principal feature of the ITT Jennings coaxial vacuum relay is its high power handling capability at frequencies up to 1.7 ghz, where it is desired to contain circuit currents completely within a coax system.

ADVANTAGES: Coaxial relay advantages include low insertion VSWR, high rf power capability, high isolation, fast operation, low and stable contact resistance, and wide pass band characteristics.

APPLICATIONS: Typical applications for this type of unit include antenna and load switching external to a transmitter, crossbar switching matrices, and general coaxial instrumentation.

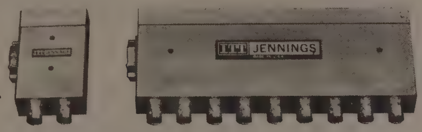
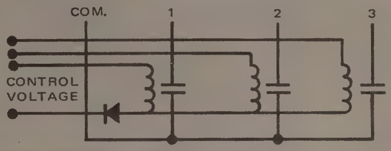
coaxial switch modules

RC1100 SERIES





APPLICATIONS

- Electrically controlled switching of wideband signals, DC—300 MHz.
- Design of complex switching circuits such as SP42T, 9P3T and other unusual switching trees.
- CATV and CCTV distribution switching.
- Telemetry and data handling networks.
- Satellite communications.
- Microwave trunks (base band and IFF frequency).
- Automatic switching of computer controlled measuring systems.
- Network analyzing digital pulse information.

FEATURES

- One to eight throws.
- Sealed RF contacts for long life, stable contact resistance.
- Designed for over 1800 switchings/day for 30 years.
- Special contact material prevents "sticking" due to feedback currents or dry circuit operation.
- DC coils are diode protected against effects of transient voltages or use of wrong polarity.
- All-aluminum flatpack housing is easily stacked to provide multi-pole, multi-throw operation.
- Low RF leakage input and output assured up to 300 MHz.

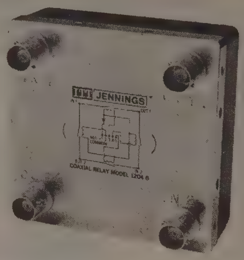
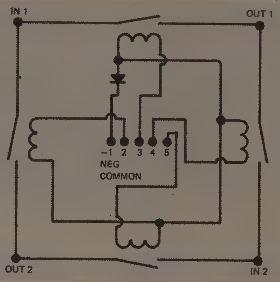
DIVISION OF INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

2 x 2 high isolation coaxial switches

2RC1204 SERIES





APPLICATIONS

- Switch wideband signals, DC-300 MHz.
- Electrically controlled switching in circuits requiring high isolation (such as IF video circuits) or very high isolation (such as RF video circuits.)
- CATV and CCTV.
- Computer controlled measuring systems.
- Non-duplication switching in RF head-end networks.
- Communications Systems.

FEATURES

- Minimum open circuit leakage over entire frequency range.
- Broadband frequency response — DC to 300 MHz range.
- Universal mounting design for panels, railings or brackets.
- Control connector adaptable to flexible ribbon for stripline or PC board interface.
- Rugged two-part housing — aluminum die casting and molded polycarbonate cover.
- Silver-plated signal paths shielded for maximum EMI protection.
- Reed switch elements hermetically sealed in nitrogen atmosphere.
- Rhodium-plated contacts prevent "sticking" due to feedback currents or dry circuit operation.
- DC coils are diode protected against effects of transients or use of wrong polarity.
- DC coils can be independently controlled or sequenced in pairs.

4 ways IC Update Master can solve the problem of device selection.

Smaller companies often offer special performance devices. How would you find a company making a device you need?

Go to the Master. Section 2 is a product guide to the entire IC industry. It allows you to survey all devices, their key operational characteristics, and the companies who supply each one.

You want to call for information on TI's MOS memories . . . What city would you call for information.

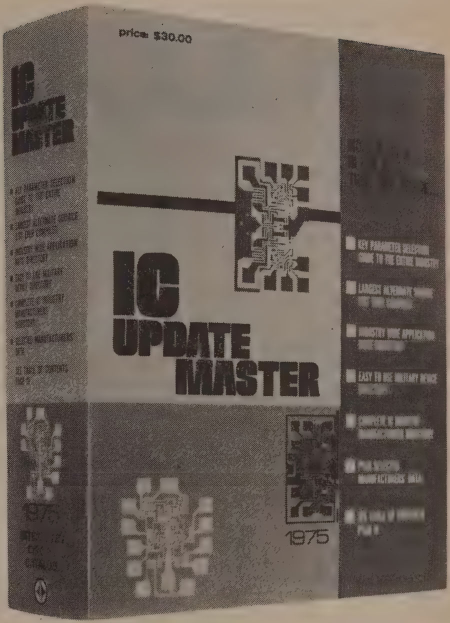
Go to the Master. Section 7 is a comprehensive telephone directory of the entire IC Industry. Page 7-37 lists Texas Instruments and the extension number for product information on MOS. It also contains a phone listing for TI sales offices and distributors throughout the country.

Motorola makes an MCM 4004 device . . . where would you look to find an alternate source for an MCM 4004?

Go to the Master. Section 3 is an industry wide cross reference. It contains over 14,000 cross references. Page 3-20 lists five other companies and their part numbers for pin-for-pin replacements of an MCM 4004.

Got a design problem . . . could an application note help?

Go to the Master. Section 5 is a comprehensive guide to the many IC application notes available. It lists the devices covered, describes each note and tells who publishes each one.



Over 2000 pages of help.

You can get a copy of the Master for only $30

There are literally hundreds of other problems the Master can help you solve. It is a totally new concept and should revolutionize the cataloging of IC data . . . it will make your job of device selection easier than ever before possible.

When you get IC Update Master you'll wonder how you've gotten along without it. Send check or money order for $30 to:

# H-24, same spec as H-23, except H-24 is SPST, N.O.

KILOVAC vacuum relays (ceramic or glass) are specified by design engineers for performance and reliability not available in conventional relays:

HIGH VOLTAGE ISOLATION: 2000 volts per mil of contact gap with predictable, repeatable isolation well in excess of rated values.

LOW AND STABLE CONTACT RESISTANCE: 0.015 ohms typical, with no contact oxidation or maintenance.

FAST SWITCHING TIME: 10 ms typical, due to small contact gap and short armature travel.

LONG LIFE: Millions of cycles with minimum degradation in electrical performance.

Any one of these standard features will justify your selection of KILOVAC vacuum relays. KILOVAC design and years of production experience permits immediate off-the-shelf delivery from a broad product line with voltages up to 100 KV. Special modifications provided in extremely short order.

High vacuum technology has made high voltage switching practical with considerable savings in space and weight. KILOVAC uses the latest in vacuum pumping techniques, utilizing the "ion" type pump and achieving, in production, hard vacuums to 10^{-8} mm of mercury or better. Special manufacturing techniques include kovar-to-glass seals, final assembly in a dust and contaminant free area, specially selected glass and specially developed KILOVAC high voltage aging techniques.

KILOVAC relays are widely used in ECM, communications, sonar, radar, pulse-forming networks, medical electronics, and other high voltage equipment, or low voltage equipment where extreme reliability is a must. Many KILOVAC models are interchangeable with other manufacturers' types.

KILOVAC's broad line and "Quick Reaction Time" is geared to your most critical delivery schedule.

For complete technical information call your nearest KILOVAC sales-engineering representative or write directly to us.

KILOVAC, a company small enough to be responsive, large enough to be responsible.

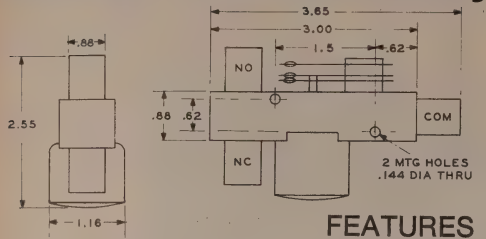
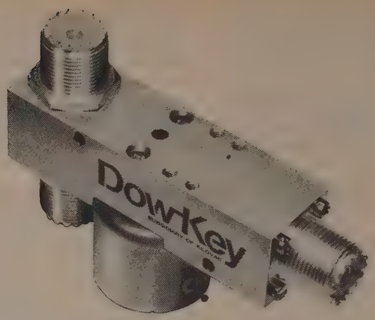
SERIES 60 SPDT Remote Coaxial Relay





FEATURES

The Series 60 are remotely operated, ruggedly constructed, SPDT coaxial relays designed for operation to one Kw. They are available with or without two Form C auxiliary contacts. For transmit-receive applications, they are available with a special high-isolation "G" connector at the NC or receive position. The "G" connector increases the isolation to greater than −100 dB at frequencies up to 500 MHz, but reduces the power rating of the normally-closed connector to 20 watts. "G" connectors will increase VSWR above 400 MHz. Data given for the Series 60 is applicable when used in a 50-ohm transmission line. UHF connectors are not recommended above 400 MHz. Standard coils are 12 Vdc (48 ohms), 26 Vdc (245 ohms) and 115 Vac (5000 ohms).

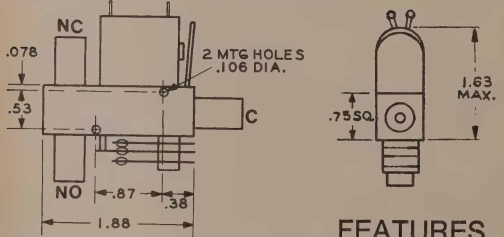
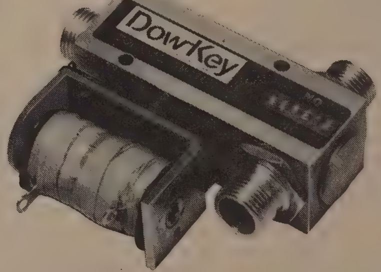
SERIES 77 SPDT Remote Coaxial Relay





FEATURES

The Series 77 are medium size, light-weight coaxial relays for industrial and less critical military applications. The "T" shaped connector configuration has the common connector at one end and the NO and NC connectors 180° apart at the other end. Available with or without one set of Form C auxiliary contacts. Coils are available in 12 Vdc (70 ohms), 26 Vdc (290 ohms) and 115 Vac (6000 ohms).

1.5

FEATURES

These are remote operation, ruggedly constructed coaxial relays designed for use from low level to one KW. There are two basic types: The 260 is a standard DPDT switch with six connectors. The 260B is similar, except for an internal connection between the NC contacts, leaving only four connectors. The 260B is widely used for inserting a circuit element, such as a power amplifier, between two normally connected elements, such as an exciter and antenna. Both types are available with or without Form 2C auxiliary contacts. Coils are available in 12 Vdc (48 ohms), 26 Vdc (245 ohms) and 115 Vac (5000 ohms).

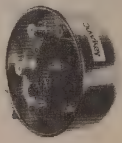
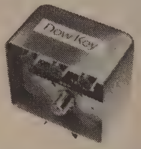
SERIES 71/72
Multi-Position Coaxial Switch





FEATURES

The Series 71 and 72 are high power, multi-position relays commonly used for switching antennas, transmitters or receivers at frequencies up to 500 MHz. They are available with shorting or non-shorting contacts, and have a separate actuating coil for each position. Any one or more inputs or outputs may be connected to the common. Coils are available in 12 Vdc (48 ohms), 26 Vdc (245 ohms) and 115 Vac (5000 ohms).

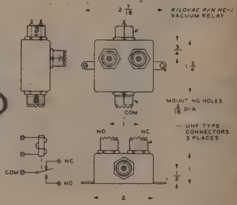
MODEL 220-2304 SPDT
Vacuum Coaxial Relay



FEATURES

This compact relay, which incorporates a Kilovac HC-1 ceramic vacuum relay as the switching element, is intended for use in antenna, transmitter, and receiver switching applications. It is capable of carrying two KW of R.F. power at 30 MHz and one KW at 250 MHz. The relay is fitted with UHF connectors, and is designed for continuous operation. R.F. impedance is 50 ohms. Standard coil voltage is 26 Vdc (335 ohms), but other coil voltages are available on special order.

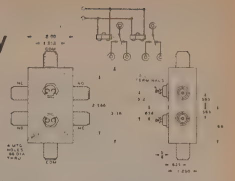
SERIES 311 DPDT
Vacuum Coaxial Relay



FEATURES

Series 311 relays are capable of handling three KW of R.F. power at 30 MHz and one KW at 400 MHz. The use of vacuum-enclosed contacts provides reliable, low contact resistance operation. Typical applications for the Series 311 relays include switching R.F. power and radar pulse-forming networks. Standard coils are 12 Vdc (60 ohms), 26 Vdc (170 ohms), 48 Vdc (450 ohms), 110 Vdc (3000 ohms), and 115 Vac (3000 ohms). (Resistance values are for parallel-connected coils.)

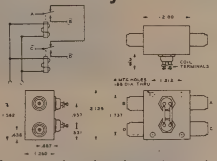
SERIES 312
Vacuum Coaxial By-Pass Relay



FEATURES

Series 312 relays are intended for use in circuits where it is desired to by-pass an RF power amplifier and connect the driving source directly to the amplifier load. Reliable, low contact resistance is provided by the vacuum-enclosed contacts. Standard coils are 12 Vdc (60 ohms), 26 Vdc (170 ohms), 48 Vdc (450 ohms), 110 Vdc (3000 ohms), and 115 Vac (3000 ohms). Resistance values are for parallel-connected coils.

SPECIFICATIONS

Operating Time .... 6 ms. max.

ELECTRICAL DATA

Peak Voltage
At 30 MHz .... 1500 V
At 400 MHz ...... 1000 V

Peak Current - 1 μsec. Pulse
At 30 MHz .... 40 amps
At 400 MHz .... 10 amps

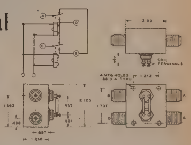
SERIES 313
Transfer/Crossover Coaxial Vacuum Relay



FEATURES

These remotely operated, ruggedly constructed transfer relays are designed for high-power, high voltage use. The Series 313 also features Kilovac vacuum-enclosed contacts for high reliability, low contact resistance and long life. Applications include interchanging two transmitters between an antenna and a dummy load, reversing feed phase for directional antenna, and similar applications. Standard coils are 12 Vdc (60 ohms), 26 Vdc (170 ohms), 48 Vdc (450 ohms), 110 Vdc (3000 ohms), and 115 Vac (3000 ohms). (Resistance values are for parallel-connected coils.)

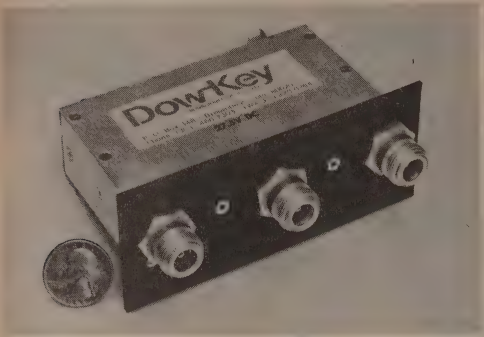
OEM SPECIALS

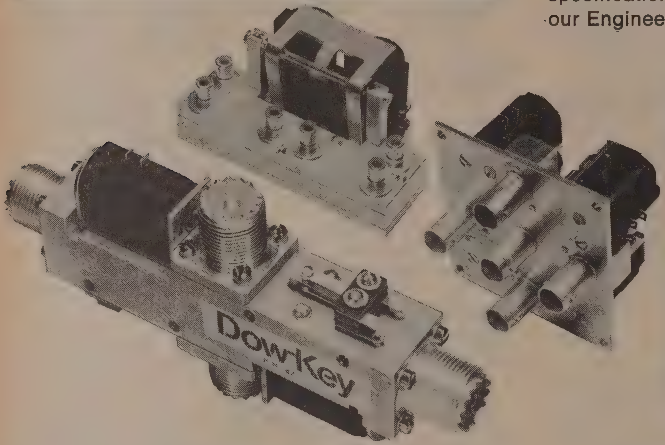


This catalog covers only the standard, most popular Dow-Key relays. We manufacture many more products than shown, and invite your inquiries.

Dow-Key offers the original equipment manufacturer a diverse background of designing and producing special relays to exacting specifications.

Latching relays, hermetically sealed relays and a wide variety of switching arrangements, non-standard connectors, attached cables of various types (with or without connectors) and special coils are available.

Your inquiries regarding relays designed to your specifications will receive prompt attention from our Engineering and Marketing Departments.



Series 400 Remote Coaxial Relays

The Dow-Key Series 400 coaxial relays are designed to meet all requirements for high reliability, high performance, broadband coaxial RF switching. These relays are designed for use with cable and connector sizes of your choice.

Series 400 coaxial relays provide excellent electrical characteristics over frequency ranges of dc to 12.4 GHz and dc to 18.0 GHz and can be optimized for maximum performance at any narrower band of interest. The relays are designed to provide a wide variety of optional RF and power connectors to satisfy the requirements of nearly any application. The Dow-Key engineering department will be pleased to work with you on your requirements and problems.

Ordering Information

In the data given for each Dow-Key relay series, the first two or three digits denote the series or basic relay type. The "XX" following the hyphen represents the coil voltage; refer to the coil data table and replace XX with the appropriate coil number. The next two digits designate the type of connector. The final two digits, when used, indicate auxiliary contacts or special terminations.

Using the Series 60 SPDT remote coaxial relay as an example, assume a relay with UHF connectors and 2C auxiliary contacts, with a 12 Vdc coil is wanted. The numbers shown in the Connectors and Part Numbers table are 60-XX0442. Referring to the Coil Data, the coil number is found to be 22. Thus, the part number would be 60-220442.

Various other coils and connectors, as well as certain other modifications, are available in addition to the standard series shown in this catalog. Please contact the factory for your special requirements.

Coil Data

Standard coil voltages are 12 Vdc, 26 Vdc, and 115 Vac, except for vacuum coaxial relays, which are also available at 48 Vdc and 110 Vdc in standard models. Other voltages listed in the table right are available on special order at a slight premium price or in minimum-order quantities.

Part No. Digits	Nominal Volts	Part No. Digits	Nominal Volts
21	6 Vdc	25**	110 Vdc
22*	12 Vdc	26*†	115 Vac
23*	26 Vdc	64††	220 Vac
24**	48 Vdc		

* Standard Coils

** Also standard for vacuum coaxial relays only.

† External diode rectifier supplied with vacuum coaxial relays (not required with other models).

†† Not available on vacuum coaxial relays.

(Within normal temperature and voltage ranges, all the listed coils are rated for continuous duty.)

Connector Data

Connectors are 50-ohm female jack type, unless otherwise specified. The dimensions, materials and finishes are in accordance with applicable military specifications. In many cases, standard 50-ohm relays and switches may be used without introducing significant discontinuities in 75 and 90-ohm impedance circuits at the frequencies where the higher impedance cables are normally employed.

Only the most popular connector types are listed with each coaxial relay or switch described in this catalogue. Within available space limitations, a number of other connectors are available on special order. These include types TNC, HN, C, SC, OSM, and others. Contact the factory for your special connector requirements.

Environmental Data

Design characteristics of Dow-Key relays and switches are generally based on the requirements of specification MIL-S-3928 and the test procedures of MIL-STD-202. In general, the criteria for shock and vibration resistance are operational requirements of no contact opening in excess of 10 microseconds. Non-operating tests may be performed at much higher acceleration levels with no subsequent electrical or mechanical impairment. Shock capability ranges from 15 to 50 g, and vibration capability from 10 g at 55 Hz to 10 g at 2000 Hz. Temperature tolerances are from −55° to +125°C, with most relays bracketed between −55° and +85°C. Complete, detailed information for individual relays and switches is available on request.

VSWR and Isolation Data

Listed below are typical VSWR and isolation values for Dow-Key coaxial relays and switches. The VSWR figures indicate the discontinuity introduced by the addition of the relay or switch in a matched system. Isolation data are in decibels, and indicate the magnitude of leakage to an open terminal when that terminal is terminated in a resistive load equal to characteristic impedance of the system. Type UHF connectors are not recommended for use at frequencies above 400 MHz. Their use above that frequency may cause a substantial increase in VSWR.
